Luanshya District Integrated Development Plan 2023-2033

Vision: Economically Diversified Green City by 2033

DISCLAIMER

The views expressed in this publication do not necessarily reflect the views of European Commission or UK Government's official policies.

FOREWORD

In an effort to provide improved services to all residents of Luanshya District, the Council, through a multi-sectoral approach, has prepared an Integrated Development Plan for the district. The Integrated Development Plan, 2023-2033 is a policy document that outlines the district's desired developmental outcomes, strategies and programmes. The development of this plan is premised on an integrated multi-sectoral approach to planning which leaves no one behind.

The main economic base for the district is mining, which scenario has been slowly changing to other areas of the economy. This plan is therefore designed to change focus from mining to other sectors for the purpose of achieving diversified and sustainable development. The emphasis is not only in

mining investment but also other sectors such as agriculture, forestry and tourism development.

The Integrated Development Plan departs from sectorial-based planning to an integrated (multi-sectoral) development approach, so as to promote mutual collaboration among all players in the district. The need to strengthen the linkages between the District and Sub district levels/communities through Ward Development Committees in order to realize district aspirations contained in this document cannot be overemphasized.

The Integrated Development Plan highlights priority issues in the district, identified through participatory processes. The process included an analysis of the district situation by the district staff from Government Departments, Non-governmental Organizations, Parastatal and Private Organizations, and assessment of the poverty situation with the community representatives from various zones of the district that were identified by considering their physical characteristics and the social services availability.

Therefore, I would urge all stakeholders to be fully committed and participate in the implementation of this Plan. I also call upon the District Development Coordinating Committee, Ward Development Committees, Non-Governmental Organizations, Civil Society Organizations, and Faith-Based Organizations to take the lead in the implementation of the Plan.

Luanshya District Integrated Development Plan 2023-2033

The Private sector and our Cooperating Partners' invaluable contributions to the development of the district cannot be emphasized. It is envisaged that the cooperation will grow even to greater heights as we implement this Development Plan.

I have no doubt that with consented efforts; we will achieve the goal of this plan without leaving anyone behind during the next ten years.

CHARLES MULENGA
LUANSHYA MAYOR

ACKNOWLEDGEMENTS

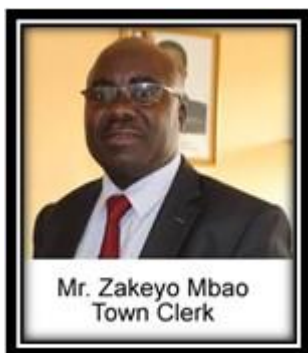

It is my pleasure to convey my heartfelt gratitude to the Commonwealth Local Government Forum (CLGF) with other cooperating partners and Ministry of Local Government for the financial and technical support respectively rendered to the district during the development of this plan.

I further wish to convey my sincere gratitude to the District Administration and the Local Authority for spearheading stakeholder participation in the formulation of the document through various consultative meetings at both district and sub district levels. This was done to build consensus and ownership of the plan by the district.

The enthusiasm, dedication and unity of purpose demonstrated during the formulation of this Plan, gives hope that, together, we can achieve what is envisioned in it. In this regard, special thanks go to the District Integrated Development Plan team for their technical input and dedication throughout the whole process, which contributed much to the contents of this plan.

In conclusion, I would also like to acknowledge the contribution of the civic leaders, members of the District Development Coordinating Committee and Ward Development Committees for their input.

ONCESMORE NG'ONOMO
DISTRICT COMMISSIONER

EXECUTIVE SUMMARY

The sectors in the district have endeavored to come up with a realistic future focus by considering the district capacity and realistic in-flow of resources. The Integrated Development Plan is a super plan with the overall Development framework for the entire district; it is a roadmap for harmonizing all developmental strategies in the district. The primary aim of the Plan is to elevate Luanshya level of development to **“An Economically Diversified Green City By 2033”**

The plan outlines a general framework for the prioritization of development actions and distribution of scarce resources to achieve objectives aimed at fulfilling Luanshya District Vision and Goals.

The planning Document is segmented into three main parts; the first part provides information on the Overview of Luanshya District. The second part highlights more on the planning survey and issues report, it outlines the issues identified during community consultative meetings and provides information on sector analysis. The third part of the document outlines the Development Framework; it provides information on the vision for the district, policies to direct development and spatial Development framework. The fourth part is on implementation plan providing information on capital investment program, Local Authority’s Financial Plan, Programme for the Preparation of Local Area Plans and Other Detailed Planning Activities and Monitoring and Evaluation Plan, Including Key Performance Indicators. The fifth and last part for the document is on the appendices, conclusion and bibliography.

1 Introduction and Background

1.1 Introduction

The Integrated Development Plan (IDP) is a ten-year principal strategic planning document for the district. It encompasses all developments to be undertaken during the period from 2023 to 2033. Importantly, it ensures close co-ordination and integration between projects, programmes and activities, both internally and externally (within and outside government spheres). The IDP therefore ultimately enhances integrated service delivery and development and promotes sustainable, integrated communities, providing a full basket of services, as communities cannot be developed in a fragmented manner.

The Integrated Development Plan (IDP) is the principal strategic planning instrument which gives an overall framework for development within the district and guides and inform planning, budgeting, management and decision-making within the district by all levels of government and other actors (MLG, 2019). The IDP aim to seek a balance between physical, social, economic and environmental objectives in the District. The following were the steps undertaken by the district.

Preliminary Step – The planning program and budget was prepared. The planning programme ensured the proper management of the planning process. This involved the budget, activities schedule and public participation procedures.

- **STEP 1**-Undertaking the Planning Survey and Preparing the Issues Report: It provided the baseline of the district status in various sectors.
- **STEP 2**-Preparing the Development Framework: Under this step, the vision and mission were developed. The development of objectives, strategies, programs, projects, outputs, outcomes, output indicators and outcome indicators.
- **STEP 3**-Preparing the Spatial Development Framework: During this stage, the overall land use and settlement strategy for the IDP area was determined. Part of the process considered the land use and land management implications of all development objectives, strategies and projects.
- **STEP 4**-Preparing the Implementation Programme: The IDP set out a clear strategy for implementation of the District vision and objectives, including a capital investment plan and strategy for monitoring and evaluation. The Integrated Development Plan area covers the entire district of Luanshya.

1.1.1 The need for IDPs

An IDP is a legal process required of Zambian municipalities; however, apart from legal compliance, there are many advantages and benefits to undertaking integrated development planning. These include the following:

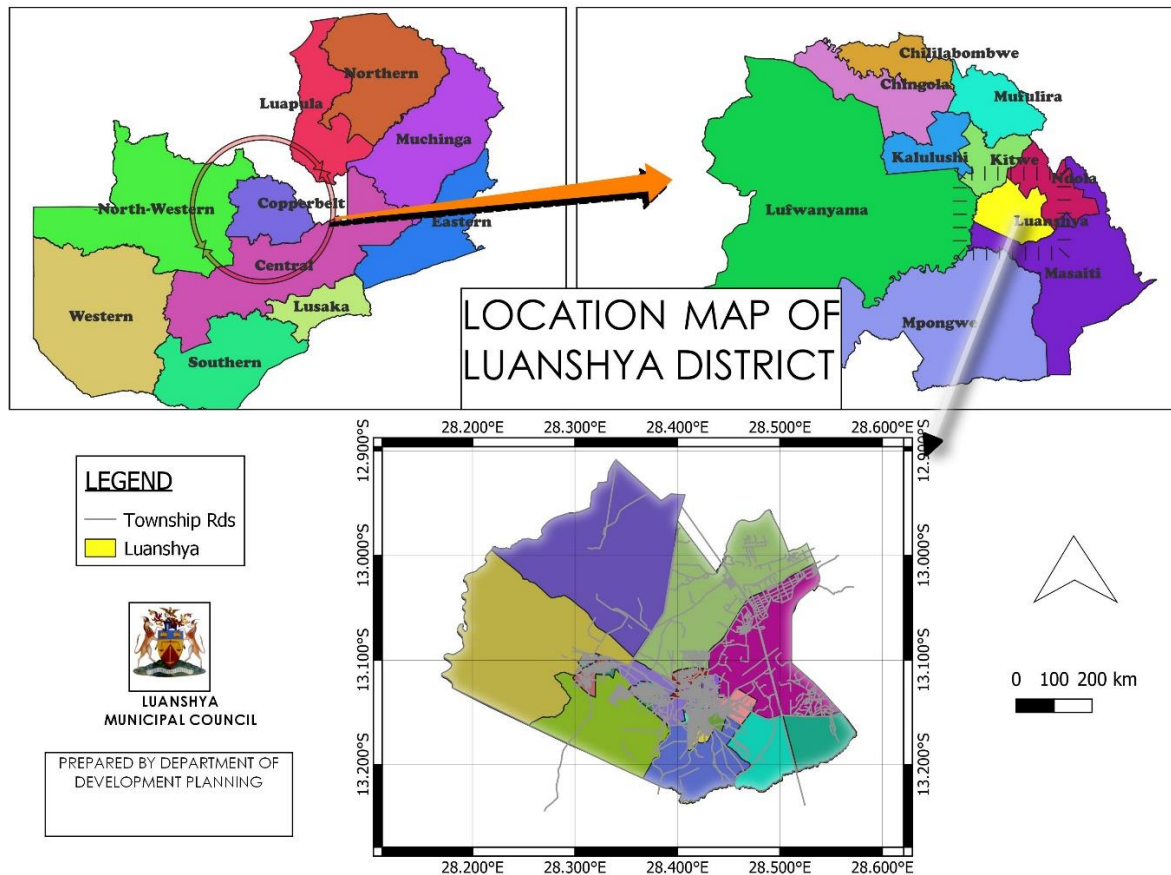

- ❖ Prioritisation and allocation of scarce resources to areas of greatest need.
- ❖ Achieving sustainable development and growth.
- ❖ Democratising local government by ensuring full public participation in its planning, implementation, monitoring and evaluation
- ❖ Using available capacity effectively

1.2 District Over view

1.2.1 Location and Size

Luanshya District is located on the Copperbelt Province of Zambia. The District is 337 kilometers from the country's capital city, Lusaka and 35 kilometers from Ndola, the Provincial headquarters of the Copperbelt Province. Luanshya lies on an approximate latitude of 130 7' 59.880" s and longitude 280 23' 60.00". Additionally, it has an altitude of 1257metres above sea level and boasts of an area of 1, 007.6087 km². Furthermore, the District has two (2) constituencies and thirty (30) wards. It shares boundaries with Ndola District on the North East, Masaiti District on the South, Kitwe District on the North West and Lufwanyama District (particularly Chief Lupuma's chiefdom) on the north-west as shown in figure 1.

Figure 1: Shows the location of Luanshya District

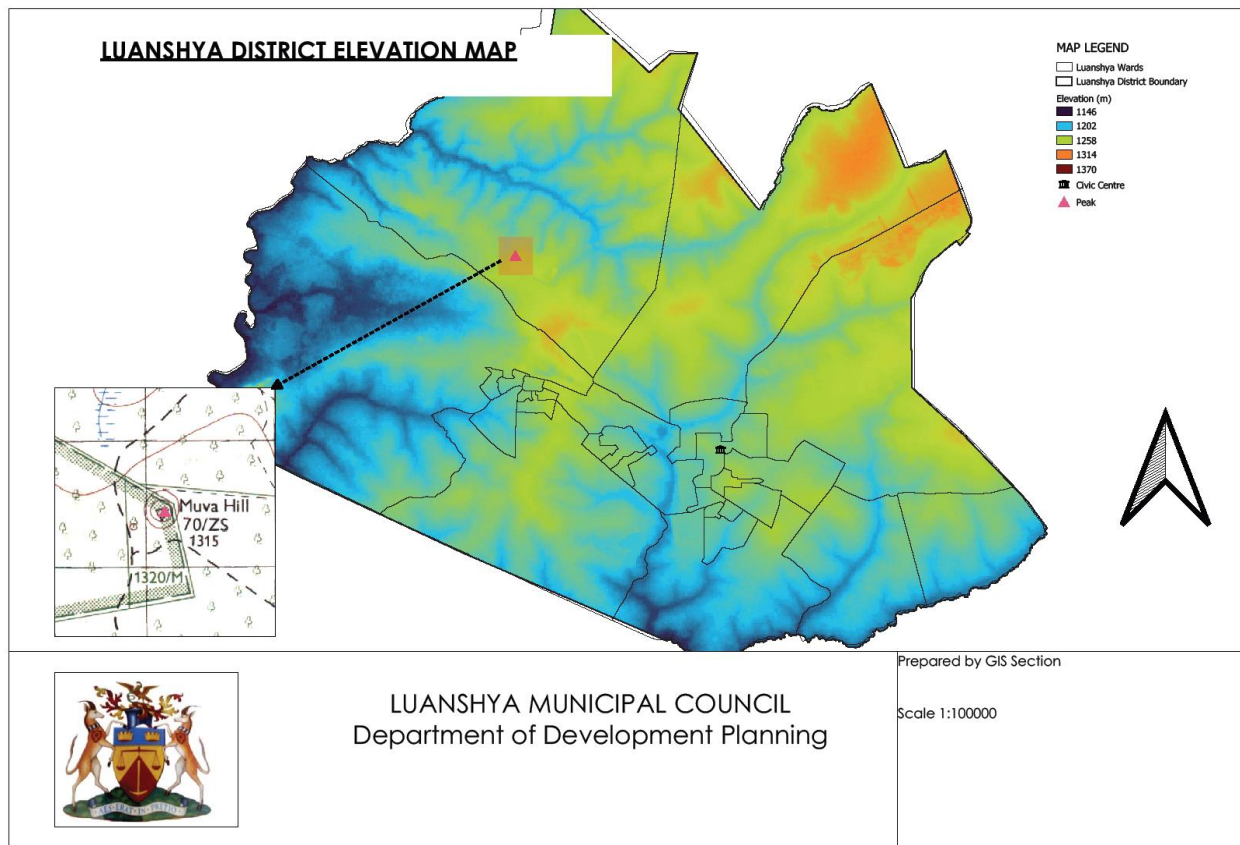

1.2.1 Climate

The weather pattern varies during each year with the district experiencing rainfall between November and April. The hot and wet rainy season lasts between November and April with average of 1200 mm rainfall per annum. The rainfall is often accompanied by some thunderstorms and lightening. The hot and dry season lasts between August and October. The daily maximum and minimum average temperatures of 27.2°C and 13.4°C occur in October and July respectively.

1.2.2 Topography

Luanshya District is situated on an average elevation of 1256 meters above sea level. The area forms a gently undulating plateau rising to low hills of approximately 1370m in the north and 1130m to the South. The plateau is broken by isolated low ranges of granite to quartzite hills rising to heights of 100m above the general level of the plateau.

Figure 2: Shows the Elevation for Luanshya District

1.2.3 Vegetation

The Vegetation of Luanshya is pre-dominantly that of savannah shrubs and closed Miombo Woodlands with swampy/damboo evergreen patches near rivers. Forestry areas are present and established to protect water catchment's areas.

1.2.4 Hydrology

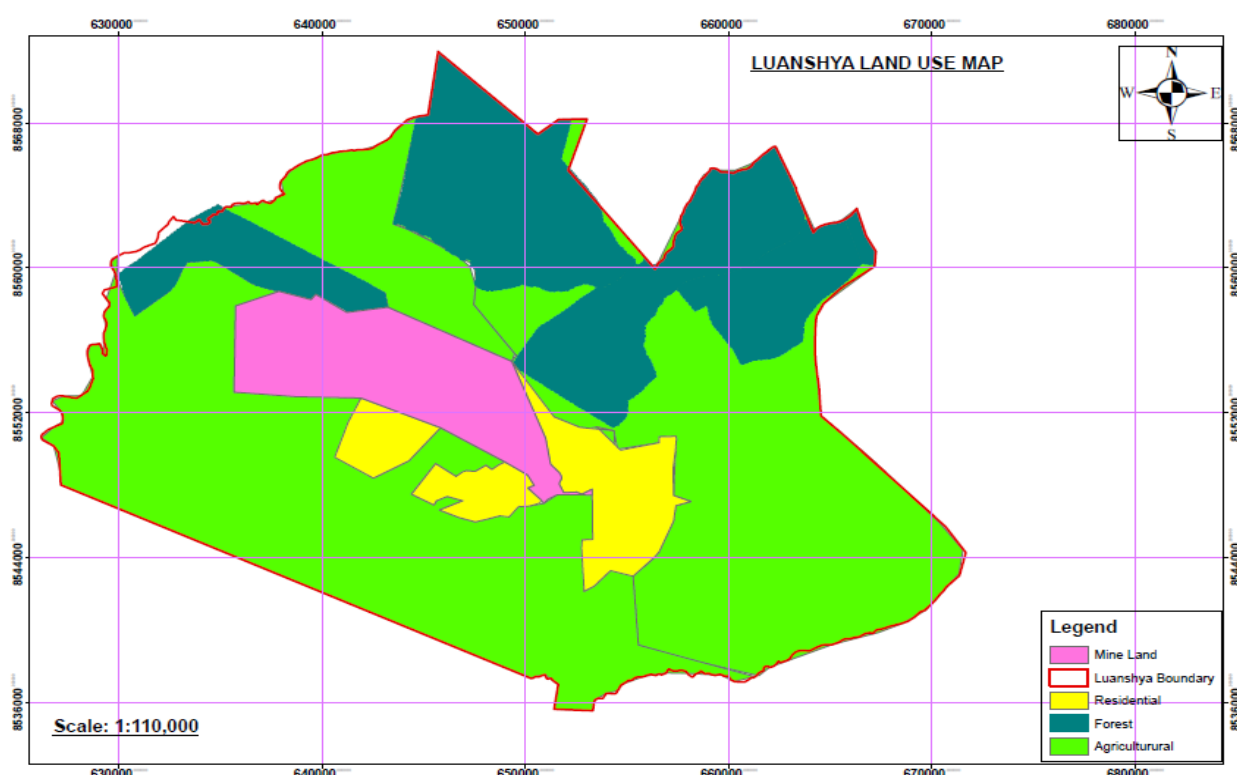

The opportunities for the development of agriculture in the district are excellent due to the availability of water resources, which include but not limited to the following streams;

- Baluba stream, 15km from the town centre and drains east west into Kafue River.
- Luanshya stream, 5km west from town centre and drains north to south into the Kafubu River.
- Mikomfwa Stream, 2 Km East of Mikomfwa Township and drains into Luanshya stream. Furthermore, other streams include; Maposa stream, Fisenge stream and Chitwi stream.

1.2.5 Land and Land Use

Luanshya District has no customary land, entailing that, all land within the boundaries of Luanshya District is state land. The Local Authority (Luanshya Municipal Council) under circular no 1 of 1985 of the Lands Act holds delegatory powers to plan and administer land within the District. However, this excludes land administered under the Mines and Minerals and the Forest Acts of Zambia. Figure 3 shows the land uses found in the District-

Figure 3: Land Use Map for Luanshya District

1.2.6 District Governance

Luanshya District, similar to other Districts in Zambia has the dual system of governance that is Central and Local governance.

1.2.6.1 Central government

The District Administration headed by the District Commissioner co-ordinates Central Government functions and all developmental activities as well as harmonizing functions with those of Local Authorities and other Ministries to ensure effective implementation of developmental programs in the District. These departments report to the District Commissioner and their respective Provincial heads administratively and technically. However, with Devolution Policy, some Government Departments have been devolved to the Local Authority

and further report to the Office of the Town Clerk. The District Commissioner's Office provides stability by ensuring that all developmental activities are coordinated in the District. This is done through consultative meetings with stakeholders in the District and through the District Development Coordinating Committee (DDCC). This coordination of development contributes to improved quality of life of the residents of Luanshya.

1.2.6.2 Local government

Luanshya Municipal Council is one of the ten Local Authorities on the Copperbelt Province of Zambia. The Council was established for the purpose of providing Local Governance in accordance with the Local Government Act Chapter 281 of the Laws of Zambia (Assembly, 2010). Luanshya District is delimited into two constituencies which are; Roan and Luanshya with 30 wards as political boundaries. Therefore, The Council consists of 30 elected councilors representing their respective wards and two (2) Members of Parliament representing constituencies.

The major role of The Council is to make local policies that guide development activities in the District. The Council is headed by His Worship the Mayor who is assisted by the Deputy Mayor.

PART 2

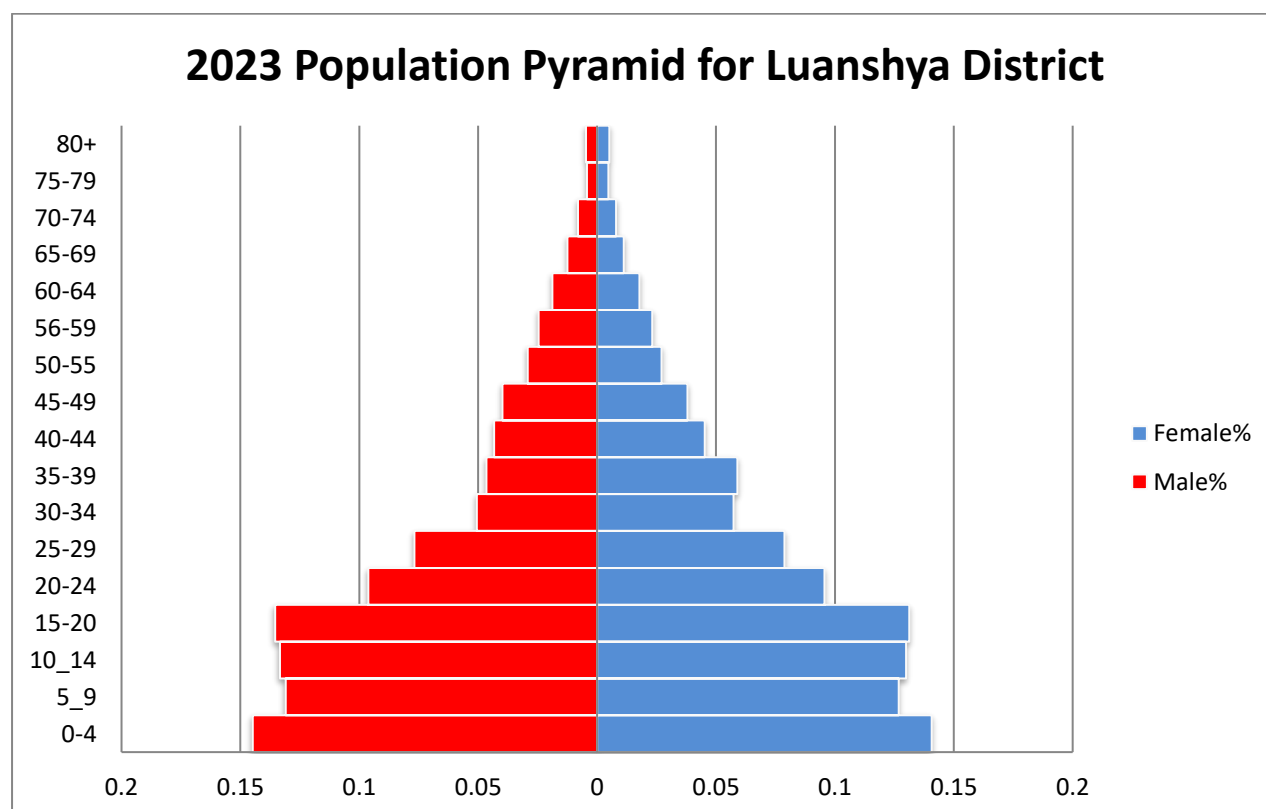

PART TWO –PLANNING SURVEY AND ISSUES REPORT

2 DEMOGRAPHIC ANALYSIS (POPULATION DYNAMICS AND WORKFORCE)

2.1 Population and Population Growth

According to the 2010 Population and Housing Census, the total Population of Luanshya was 156,059 with an average annual population growth rate of 0.5%. The Population is segregated as 77,368 Males being 49.6% of the Population and 78,691 Females being 50.4% of the Population (Census, 2010). According to Zambia Population and Demographic Projection for 2011-2035, 2023 *projected* population of Luanshya was 181,289. The projected Population is segregated as 89,166 males being 49.1% of the Population and 92,123 females being 50.8% of the Population.

Figure 4: 2023 Population Distributions by Age for Luanshya District

(Source: Population and Demographic Projections 2011-2035)

Luanshya District Integrated Development Plan 2023-2033

Figure 6 highlights that the age distribution in Luanshya District is characterized by a higher percentage of the younger population. The percentage decreases with increase in age.

Districts	2000 Census	2010 Census	2020 projected population	2033 projected population	Growth rate (Percent), 2000-2010	Growth rate (Percent), 2011-2033
Copperbelt Province	1,581,221	1972317	2 669 635	3, 640, 176	2.2	2.2
Chililabombwe	67,533	91833	134 272	201, 550	3.1	3.0
Chingola	172,026	216626	293 959	399, 472	2.3	2.2
Kalulushi	75 806	100381	143 032	207, 487	2.8	2.7
Kitwe	376,124	517543	762 950	1, 152, 505	3.2	3.0

Table 1: Average annual rate of population by district, Copperbelt province, 2000-2033

Source: 2010 Census of Population and Housing & Zambia Population and Demographic Projection for 2011-2035.

Table 1 shows the average annual rate of population growth for Copperbelt Province by District during the 2000-2010, 2011-2033 inter-censal periods. The population of Copperbelt Province grew at an average rate of 2.2 percent per annum during the inter-censal period 2000-2010 and 2011 to 2033. Luanshya District had the least annual rate of population growth at 0.5 percent per annum during the inter-censal period and 0.6 from 2011 to 2033.

Luanshya District Integrated Development Plan 2023-2033

Figure 5 :2010 Population Distributions by Ward, Luanshya District

The Map above indicates that the three wards namely Muva Hill, Twashuka and Chifulube are the least densely populated.

2.2 Population Characteristics

Table 2: Population distribution by sex from 2000 to 2033 for Luanshya district

Year	Total	Male	Female	Male%	Female %
2000	147, 908	74, 963	72, 945	50.7	49.3
2010	156059	77, 368	78,691	49.6	50.4
2019	176, 798	87, 300	89, 498	49.4	50.6
2020	177, 934	87 775	90, 159	49.3	50.7
2030	188,417	92,018	96,399	48.8	51.2
2033	190, 978	92, 981	97, 997	48.6	51.3

Source: 2010 Censuses of Population and Housing & Zambia Population and Demographic Projection for 2011-2035

The population of Luanshya District grew at a rate of 0.5 per annum during the 2000 and 2010 intercensal period and is projected to be growing at a rate of 0.6 per annum during the 2010 and 2033 inter-censal period. This population trend is attributed to poor access to quality

Luanshya District Integrated Development Plan 2023-2033

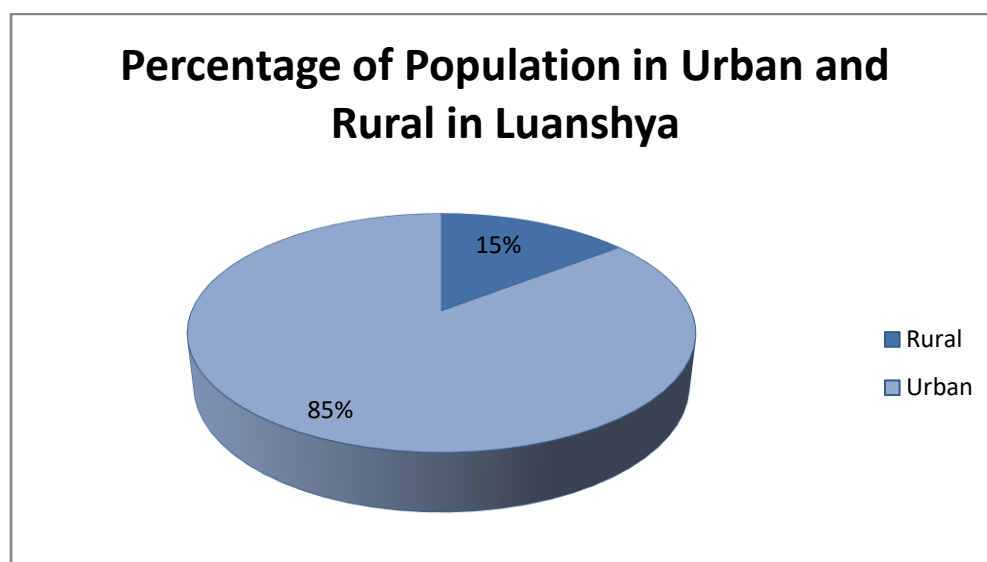

health services especially in the peri-urban areas. In Luanshya District emigration is far much more than the immigration due to collapsing of industries especially in the mining sector. The IDP will create an enabling environment for employment and economic standing of the District. It will further provide a road map for improving health service delivery for all.

Table 3: Population in Peri Urban and Urban by Sex for Luanshya District

Gender	Male	Female	Total	Percent
Peri urban	11,711	10,980	22,691	14.5%.
Urban	64,657	67,711	133,368	85.5%

Source: 2010 Census of population and Housing

Figure 6: Percentage of people in Urban and Peri Urban in Luanshya district

Luanshya District is pre-dominantly urban, due to the search for employment in urban Areas. However, the IDP will be able to foster development in the peri-urban areas by addressing key issues identified by the community. According to the table above, 85.5% of the population lives in the urban area with 14.4% living in peri-urban areas.

Luanshya District Integrated Development Plan 2023-2033

Table 4: Number of Households and Population by District, Constituency and sex-2010

District Constituency	Number of Households	Total Population		
		Female	Male	Total
Luanshya Constituency	19,037	49,754	48,744	98,498
Roan Constituency	10,006.	28,937	28,624	57,561
Luanshya District	29,043	78,691	77,368	156,059

Source: 2010 Census of Population and Housing

2.3 Dependency Ratio

The child-dependency ratio on the Copperbelt has been gradually declining while the aged dependency-ratio has been increasing. The overall dependency-ratio declined from 85.1 in 2000 to 76.2 per 100 persons aged 15-64 years in 2010. The aged dependency-ratio increased from 2.2 in 1990 to 4.1 in 2010. Luanshya District is the lowest in the province in terms of overall dependency standing at 70.7 persons whilst is recording 66.0 and 4.6 respectively in terms of child and age dependency. The child dependency ratio declined due to emigration of the young people in search of employment opportunities outside the district. With regard to aged dependency ratio, this phenomenon increased due to the closure of the mines which led to the loss of employment in the district.

2.4 Projected Population and Likely Characteristics

The table below shows projected gender population from 2019 to 2033:

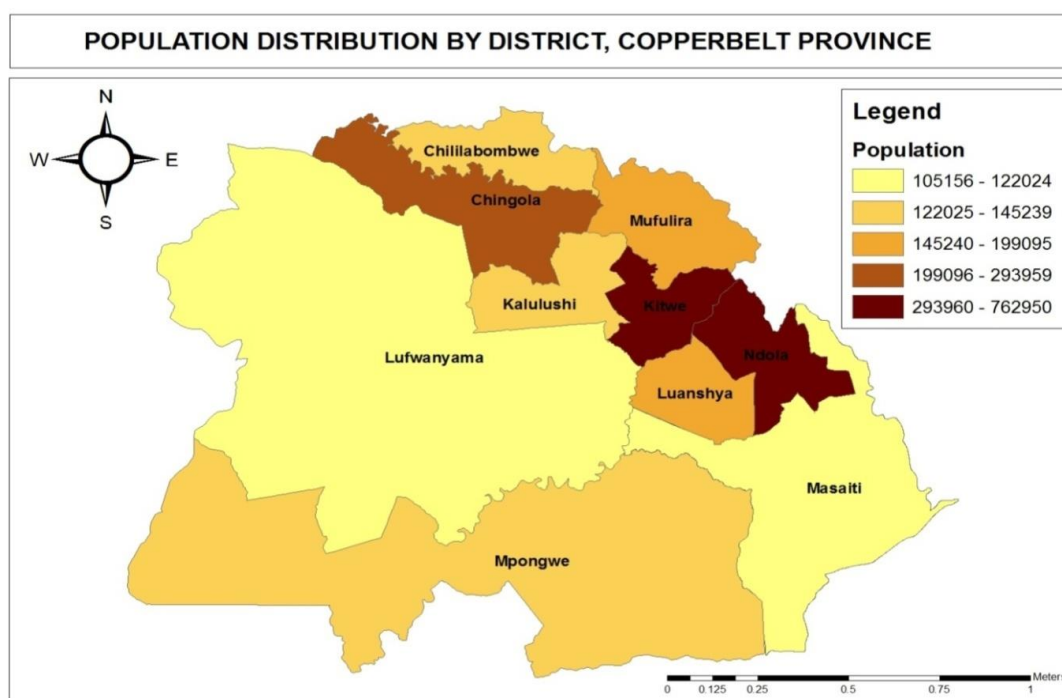

Table 5: Population projection by gender from 2019 to 2033

Year	Male	Female	Total
2019	87300	89498	176,798
2020	87775	90159	177,934
2025	90,050	93402	183,452
2030	92018	96399	188,417
2033	92, 981	97, 997	190, 978

Source: Zambia Population and Demographic Projections, 2011-2035

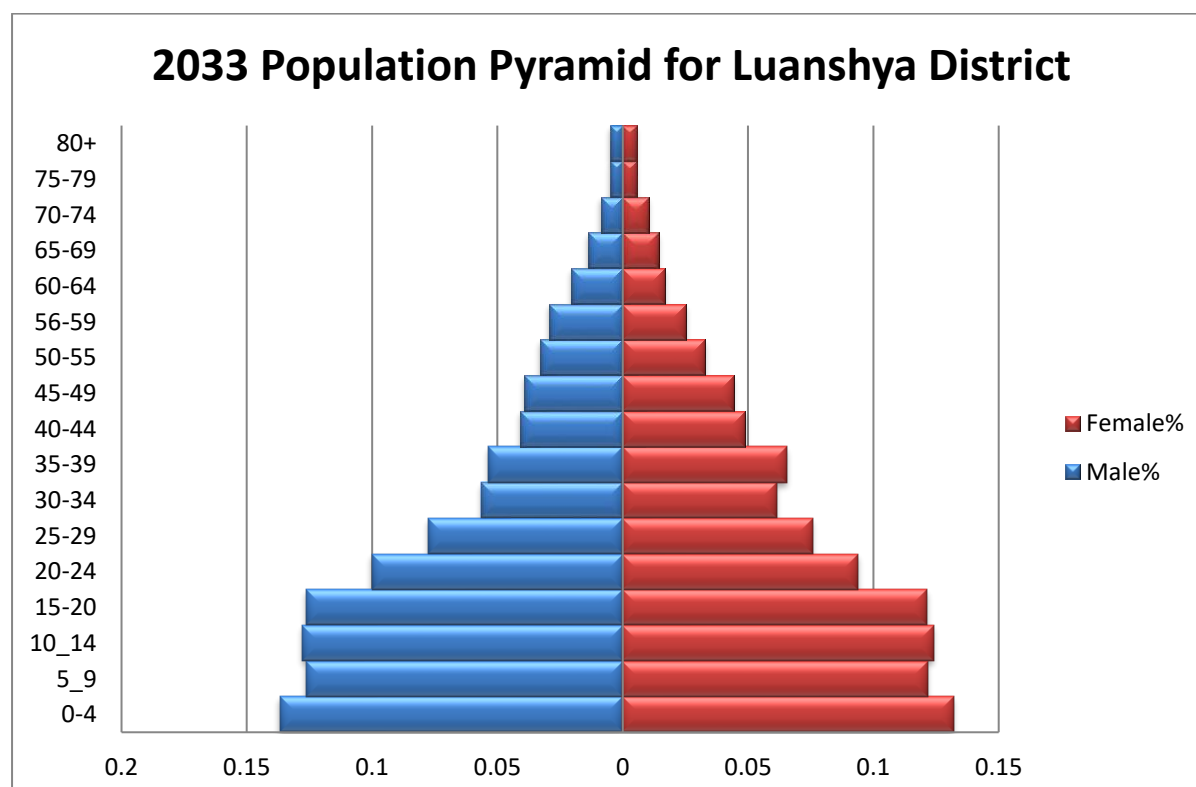

Population growth rate looks at the rate at which the number of individuals in a population increases per year in a given period. The population of Luanshya District grew at a rate of 0.5 per annum during the 2000 and 2010 period and is projected to be growing at a rate of 0.6 per annum during the 2010 and 2033 period.

Figure 7: 2023 Population distributions by District, Copperbelt Province

Table 6: Population in Peri Urban and urban areas from 2010 to 2033

Year	Rural	Urban
2010	22,691	133,368
2020	23149	136 062
2030	23 617	138 810
2033	24 517	166, 461

Figure 9: Population Distribution in Peri Urban and urban areas from 2010 to 2033

2.4.1.1 Characteristics of Projected Population

According to the projections, the population of Luanshya District will continue to grow. The likely characteristics of this population can be described as follows:

- ❖ The highest population is in the 0-4 age group which will require under five health services.
- ❖ The age groups between 3-6 years officially is supposed to be under Early Childhood Education (ECE). The Ministry has recognized the importance of mental development of these age groups mainly through the structured PLAY LEARNING APPROACH in schools. It has instructed all primary schools to open ECE centers. This has not come with provision of suitable new infrastructure. There is need to provide suitable infrastructure such as desks, toilet pans and additional classroom in most primary schools to improve access.

- ❖ The second highest population is in the age groups of 5-9 and 10-14. These age groups are in the primary school. The implication is that, there is need for more primary schools.
- ❖ The third highest population is in the age group of 15-19 which comprises school going children. Therefore, there is need for building more schools especially in the peri urban areas while construction of additional classroom blocks in most urban schools can enhance access to education services to this population.
- ❖ The fourth highest population consists of youths who attend tertiary education.
- ❖ The fifth highest population is in the age group 25 – 60. This is a highly actively age group which is in the labor force.
- ❖ The District is also expected to host what is known as a ‘transit population’. This refers to the people that will only come to the District to conduct business but will not have permanent residence in the District. This is a very important group of people as they will contribute to the economic development of the District.

2.4.2 Implication of the Population Statistics on Service Provision

The population statistics for Luanshya District has numerous implications on the service provision which includes the following: -

- ❖ The statistics have revealed that the Luanshya population consists of youths. Therefore, there is need for more social services such as education, health centres, skills training and recreation facilities.
- ❖ The statistics reveal that Luanshya District has a large population in the active labour force in comparison to those in retirement age which are above sixty years. The implication of this is that there is need to foster the Local Economic Development (LED) of the District. There is need for more supporting industries to the mining sector and more manufacturing industries.
- ❖ There is need to support the agriculture sector as most of the residents are subsistence farmers. This can be done through the provision of services such as good road network for easy transportation and access of goods and services.

2.4.2.1 The Impact of the Continuation of Existing Population Trends on Land Use and Spatial Development Patterns

With projected population growth, it will mean provision of more services and these will require more land. The increase in population proportionally translates in an increase in the demand for services. Therefore, change of land use from agriculture to other uses such as

Luanshya District Integrated Development Plan 2023-2033

residential, commercial, institutional and industrial is anticipated due to urban sprawl. Furthermore, there will be high demand for housing and the resultant effect will be an increase in the number of informal settlements.

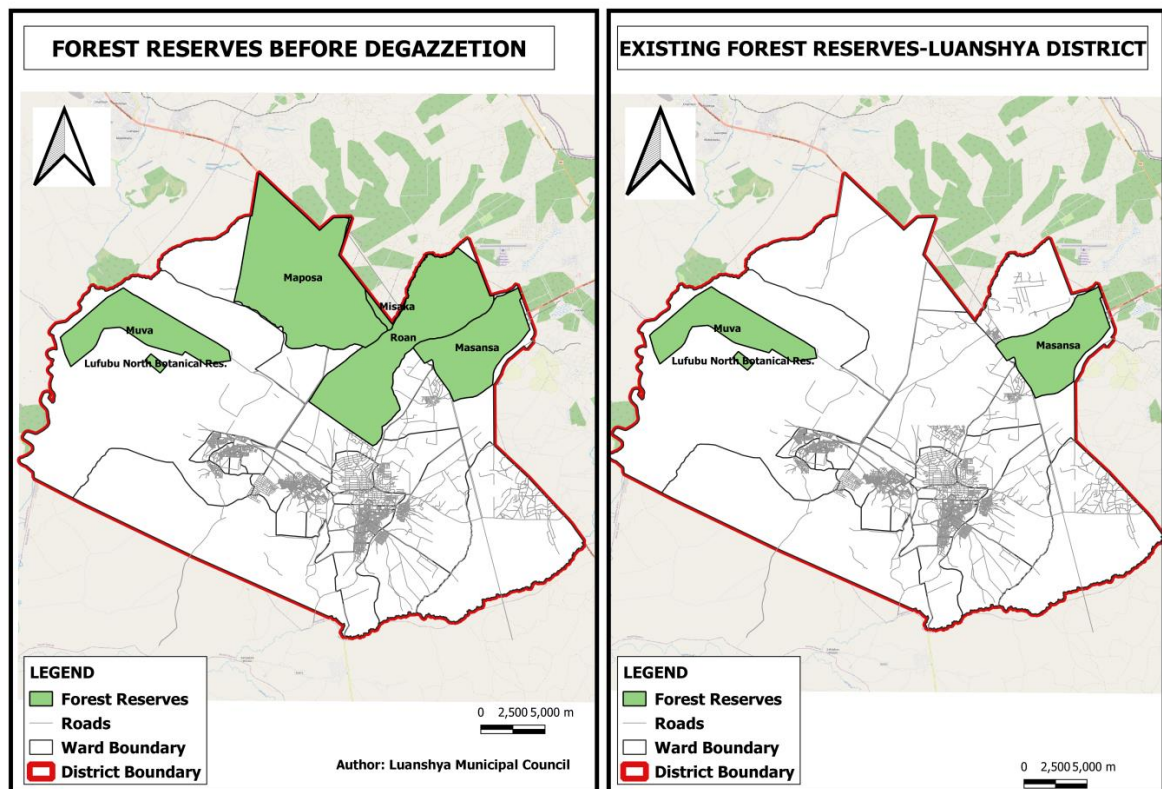

As population increases, land resources become scarce and farmers would need to farm intensively. Farmers and government may not react enough to develop technology to farm their land efficiently resulting in land degradation. Rise in population and development of modern agriculture may lead to the degradation of land and the environment.

Over-population does not depend only on the size or density of the population but on the ratio of population to available sustainable resources. This phenomenon also depends on how resources are managed and distributed throughout the population. Over-population leads to hindrances in terms of sustainable development.

Increase in population affects natural resources such as land, water and the ecosystem as a whole. This affects the global land use pattern available for agriculture and forest land cover, thus, leading to an increase in demand for land for agriculture, settlements and source of livelihoods as people engage in cutting trees for charcoal production to sustain their livelihoods which results into deforestation and land degradation.

Luanshya had six forest reserves but due to increase in demand for land for agriculture, settlements, three forest reserves were degazetted. Figure 10 shows the forest reserves before and after Degazetting-

Figure 10: Before and After Degazettion of Forest Reserves in Luanshya District

3 SECTOR ANALYSIS

This section looks at sector specific issues in the IDP area and presents an analysis of each sector. The section looks at key economic sectors in the IDP area and those that have potential to contribute in the development of the District.

3.1 Economic sector

3.1.1 Mining Sector

One of the main economic activities in Luanshya District is mining. The sector contributes greatly to the economy of the District. The District is endowed with copper ore deposits, making mining a major economic activity. Luanshya has two mines operating and owned by the giant multi-national mining conglomerate, China Non-Ferrous Metal Mines (CNMC).

3.1.2 Industrial and Commercial Sector

Luanshya is depended on mining as the source of employment for a long time and the uptake of people in the industry has become limited. This scenario has necessitated the need for Luanshya District to diversify its economy in other sectors such as Agriculture, Manufacturing and other commercial activities to change the narrative. The diversification in other sectors like agriculture is also faced by challenges of low productivity and low value addition to most produce leading to unfavorable returns to the farmers.

One area Luanshya as a District is focusing on to create jobs is manufacturing and processing through industrialization. The District prioritized the involvement of the private sector in implementing the industrialization strategy. The major drivers in the industrialization aspect in Luanshya District include Zambia Metal Fabrication (ZAMEFA) processing copper ore into cables, Matalloy Limited who are involved in alloy manufacturing and Antelope milling that processes maize into mealie meal and feed as well as Emmans Farms manufacturing feed and cooking oil. Golden-lay is the producer, supplier and distributor of eggs across the region to retail and consumers.

3.1.3 Formal Sector

The larger percentage of the residents in Luanshya is into formal employment such as civil servant and miners while the small percentage is into informal employment such as entrepreneurship and agriculture.

3.2 Education

Education and Skills Development plays a critical role in socio-economic development. It provides opportunities for inclusive growth, poverty reduction, employment, productivity and human development.

The minimum standards refer to the benchmarks of what is to be achieved if teaching and learning and several other attendant factors are to be adequate and acceptable quality. In the case of Luanshya the classrooms and teaching staff in our government schools are not sufficient.

3.2.1 Key Government Priorities Being and To Be Implemented at A Local Level (Review of Policies and Plans)

The Education sector in Luanshya District has made strides in achieving universal primary education. It drives its priorities being implemented from the 8th National Development Plan 2022-2026, the Government pronouncement of free education from pre-school to grade 12 in public schools and Re-entry Policy of 1997 (that guarantees girls the right to stay in school as long as they chose to during the pregnancy, take a maternity leave and come back after delivery) these are policies and pronouncements that guide the operations of the department.

The following are the strategies included in the 8th NDP plan

- ❖ Enhance access to quality, equitable and inclusive education
- ❖ Increased access to higher education
- ❖ Improve technical, vocational and entrepreneurship skills
- ❖ Enhance science, technology and innovation
- ❖ Reduce developmental inequalities

The District has been focusing on the following six (6) strategic focus areas:

- I. **Leadership and Management:** The strategic goal for this focus area is ensuring that schools have qualified, experienced, competent, effective and innovative school management teams. Strengthening leadership and management is cardinal in the improvement of effective delivery of services and learner performance. Education sector therefore has been building capacity in school management teams so that they can better manage teaching and learning through school instructional leadership training for all school management teams.

- II. Learners:** The strategic goal is ensuring that all learners perform according to the performance levels descriptors for their grade or level. The DEBS office is mandated to improve learner performance by ensuring that all schools provide a conducive learning environment and learner support among others.
- III. Teacher and other staff:** Strategic goal is to have qualified, competent, Skilled hardworking, disciplined and motivated teachers and other staff.
- IV. Innovation and collaboration:** The Strategic goal is to come up with innovations (new ideas, projects, programs) with other stakeholders to improve the quality of education in the District.
- V. School Environment and Infrastructure:** The Strategic goal is to ensure that all have clean, green and conducive learning environment.
- VI. No one is left behind:** To ensure that all people have equal opportunity to have an education.

3.2.2 Description of the Existing State of Development

3.2.2.1 Availability of Service

Luanshya District provides all levels of educational which include Early Childhood Education (ECE), primary education, secondary school, tertiary education and trade schools. The District currently has 14 Secondary schools, 4 combined schools (running from ECE to grade 12 but not gazetted as such), 34 primary schools (of which 35 have ECE centers), 28 community schools running both primary and ECE levels), 1 special school for children with disabilities (running from grade 1 to grade 12) and ten (10) tertiary as at 2023.

Figure 11: Map showing locations of schools in Luanshya district

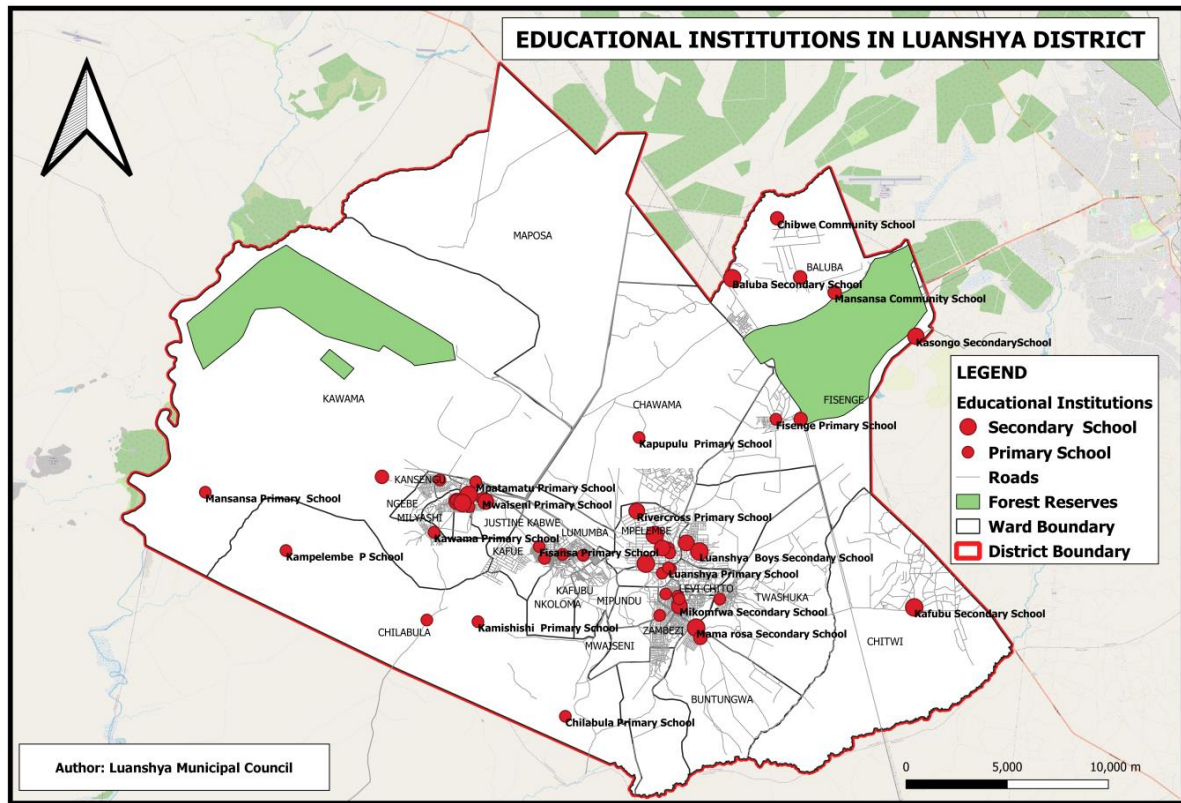

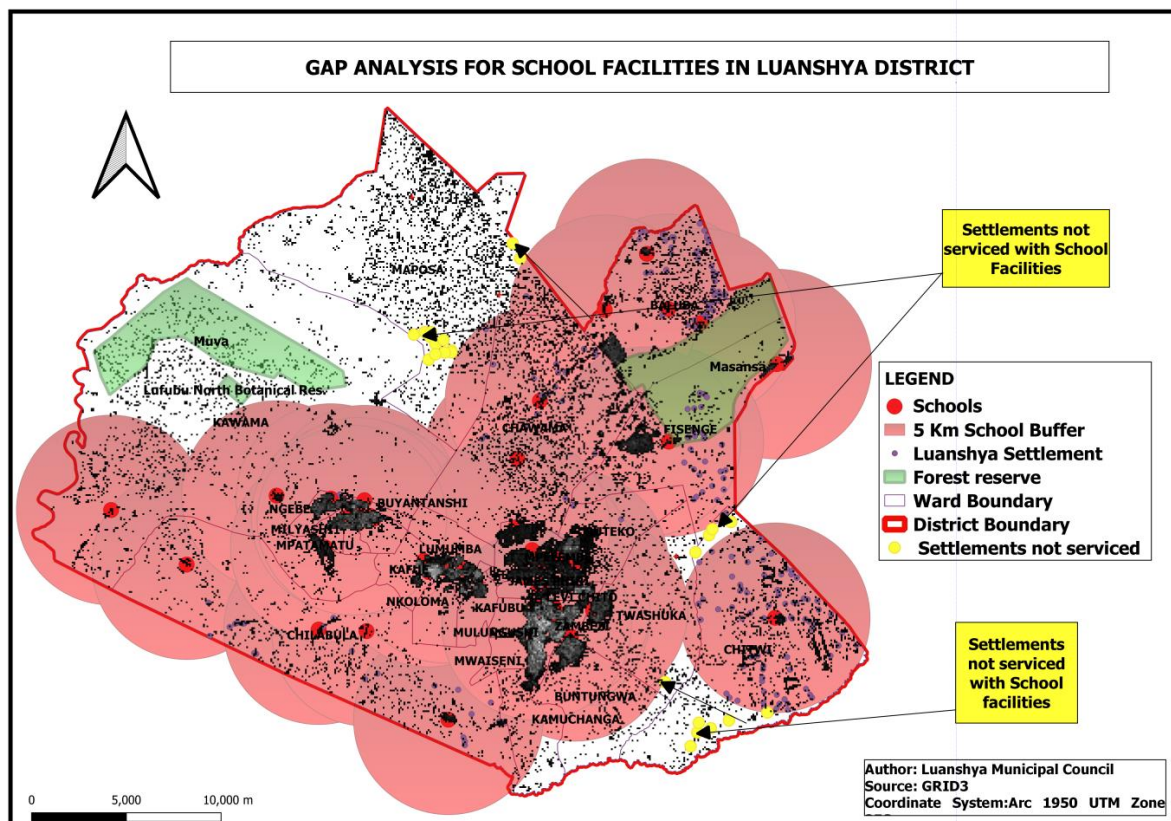

Figure 12: Gap Analysis for School Facilities in Luanshya District

Luanshya District Integrated Development Plan 2023-2033

From the school gap analysis, it was revealed that out of the total population of 203 515 for Luanshya District, the population of 188 509 were adequately serviced with school facilities whilst 15006 was not. It was also established that out of a total number of 234 settlements, 24 settlements were not served with school facilities.

3.2.3 Quality of Service Including Key Indicators of Performance

Net enrolment = $\frac{\text{Pupils aged 7-13 years}}{\text{Total population}} \times 100 = \frac{31,801}{203,515} \times 100$

Transition rate = 97%

Completion rate = 99%

3.2.4 Issues Arising from the Public Participation Process

3.2.4.1 Availability of Service

During the public consultation process of the planning survey and issues report, it was observed that education sector in Luanshya District is able to provide Early Child Education, Primary Education, Secondary Education, and tertiary education. It was also observed that children in peri-urban areas walk long distance to access secondary schools. There is inadequate and inappropriate infrastructure and long distances to Early Child Education centres, especially in peri urban areas

Pupil Teacher Ratio in peri urban is 52: 1 whilst in urban is 48: 1, this indicates that pupil ratio in the District is above the national standard in education of 40:1. The completion rate at grade 12 is below 50 percent.

At the tertiary level positive strides were made in increasing access to higher education. Progress was also recorded in the provision of vocational skills through Technical Education, Vocational and Entrepreneurship Training (TEVET) institutions in the District.

Table 7: Academic Performance in 2020 and 2021

GRADE	2020	2021
7	60.50%	61.89%
9	55.13%	58.59%
12	61.88%	72.98%

Source: Luanshya District Education Board Secretary Office 2022

Luanshya District Integrated Development Plan 2023-2033

Table 6 indicates that there has been an increase in the pass percentage for all grades in 2021 when compared to the performance of 2020. The percentage pass rate in 2021 for grade seven increased by 1.39, percent, grade 9 increased by 3.46 percent and grade twelve increased by 11.1 percent.

Table 8: Overall Education Enrolment by category from 2021 to 2022

Category	2021 ECE			2022 ECE			2021 Primary			2022 Primary		
	Boys	Girls	Total	Boys	Girls	Total	Boys	Girls	Total	Boys	Girls	Total

Source: Luanshya District Education Board Secretary Office 2021

In 2021, enrolment levels in primary stood at 40 952 out of which 19 422 were male and 21 530 were females. In 2022 there was an increase in enrolment from 40 952 to 44 991 out of which 21 125 were male and 23 866 were females. In early child education in 2022 there was a decline in enrolment from 3 502 to 4 627.

Table 9: Enrolment in secondary school from 2021-2022

Category	2021 Secondary			2022 Secondary		
	Boys	Girls	Total	Boys	Girls	Total
GRZ	6295	7488	13783	6639	7434	14073
Community			0			0
Private	163		163	163		163
Total	6458	7488	13946	6802	7434	14236

In 2021, enrolment levels stood at 13 946 out of which 6 458 were male and 7,488 were females. In 2022 there was an increase in enrolment from 13 946 to 14 236. There has been low enrolment in secondary school.

Table 10: Quality of Service Including Key Indicators of Performance

S/N	Type of Service	Quality of Service	Indicator
1	Early Child Education	Fair	Number of Enrolled ECE Pupils
2	Primary Education	Good	Number of Enrolled Primary school Pupils.
3	Secondary Education	Fair	Number of Enrolled Grade 08-12

3.2.5 Impact of Changes Anticipated Over the Next Ten Years

3.2.5.1 Population Change – Future Demand for Services and Facilities

The projected population in 2033 for Luanshya District will be 190, 978 which entails high demand for Education services such as; Early Child Education, Primary Education, Secondary Education.

- ❖ Increased number of Educational Facilities (ECE centres. Special units and Infrastructure) constructing of a secondary school in Kamuchanga ward, Muva Hill ward, Chilabula ward, Kawama ward, construction of classroom blocks at Elohi school located in Fisenge, 1 x 3 classroom Mama Rosa Primary school located in Chifulube ward.
- ❖ Upgrading of some community schools (such as Kampelembe, Milyashi, Chenda Maunga, D.M Patel (Chitwi ward along Masangano road), Children and orphan (Village 2 – Kafubu Block), Kamuchanga, Kapepa (Fisenge), Twalwisha (Chawama ward), Vine tree (- Baluba ward) & Buntungwa to full primary schools.
- ❖ Increased number of Teachers.

Table 11: Existing and Proposed Investment and Development Programmes

S/N	Category	Present situation	Future Demand	Total
❖	Secondary Schools	15	10	25
❖	Primary Schools	37	15	52
❖	Secondary school Teachers	795	700	1,495
❖	Primary School Teachers	896	800	1,696
❖	ECE Teachers	58	180	238

3.2.5.2 The Impact of the Continuation of Existing Trends on Land Use and Population distribution Patterns

Increased settlement in school areas: - once the school infrastructure is established, it will attract teachers/general workers to move nearer as it is human nature to live near services so that people do not move longer distances in accessing services. Hence the population will be concentrated around these project areas.

3.2.6 Environment and Climate Change Analysis

3.2.6.1 The Impact of Existing Trends on the Environment and Climate Change

Disturbance of the natural environment as there will be cutting down of trees which lead to deforestation, environmental pollution, scarcity of natural medicines & food supply, soil erosion and change in weather conditions.

3.2.6.2 The Impact of Environmental and Climate Change Issues on the Sector

- ❖ Increased number of classroom block roofs being blown off due to excessive rains in the District.
- ❖ Poor attendance (by Teachers and Pupils) in schools due to bridges being submerged by heavy rains in some parts of the district.

3.2.7 Issues Arising Relating to Gender Groups and Vulnerable Groups

The promotion of gender equity and equality in education means equitable access to quality education and skills development which will in turn translate into enhanced human capital for sustainable development. Access to secondary education in the District remains a challenge due to long distances learners cover especially in peri urban areas. This implies that there is a challenge of retaining learners especially girls in secondary schools. This is attributed to social economic issues which include high poverty levels, and teenage pregnancies. Other factors include lack of appropriate sanitary facilities for girls.

3.2.8 Summary

In Summary all the issues mentioned in the plan can only be attained if we get support from our cooperating partners and well-wishers. Teamwork and Cooperation from all stakeholders is needed because at the end of the day Education is a key to success. Let us strive to work towards improving our learner performance by participating in the call of helping the child to read and understand what they are reading both at household level and community level. Together we can.

Table 12: Summary – Issues for Education Sector

S/N	Ward	Challenges	Proposed solutions
1.	Baluba (Misaka)	❖ Long distance to the nearest secondary School and lack of accommodation leading to teen pregnancies as students are forced to rent in communities, ❖ Inadequate teachers house,	❖ Construction of a boarding high school, ❖ Construction of teacher's house.

Luanshya District Integrated Development Plan 2023-2033

		❖ High teacher pupil ratio in primary schools	❖ Upgrading of Baluba Primary School into secondary school ❖ Construction of classroom blocks on the existing schools
2.	Fisenge	❖ Long distance to a nearest secondary school	❖ Construction of a Secondary school in Kasongo
3.	Muva Hill	❖ Long distance to the nearest secondary school	❖ Construction of a secondary school
4.	Buteko ward	❖ Kamirenda school has no water, ablution block and electricity	❖ Water and electricity connection to the school and building of an ablution
5.	Mpelembe	❖ Poor educational facilities and services due to inadequate classrooms, laboratories, teacher houses, libraries and computer labs	❖ Construction of classroom blocks laboratories, teachers houses, libraries and computer labs
6.	Nkulumashiba	❖ High unemployment rate	❖ Provide Skill training centre
7.	Levi Chito	❖ Illiteracy among the disabled people; no proper schools for them; a school properly designed for disabled people	❖ Community school ❖ Provide a skills training center
8.	Chifulube	❖ High teacher pupil ratio	❖ Build a 1by 3 classroom
9.	Ngebe Ward	❖ Kalulu primary school is too small and has no facilities such as electricity, water and ablution block;	❖ Extend Kalulu primary school and have all facilities such as water, electricity and ablution block
10.	Kawama Ward	❖ Pupils travel long distances to nearest secondary school; no secondary school nearby; ❖ Long distance to primary school in Kasununu; no nearby primary school;	❖ Establishment of a secondary school ❖ Construction of a primary school in Kasununu
11.	Zambezi Ward	❖ Mipundu primary school is in a bad state; no wall fence, broken desks, unpainted and no library;	❖ Construct new wall fence, rehabilitate buildings, build a library and procure desks at Mipundu primary school
12.	Chilabula	❖ School collapsed at chisokone Community school ❖ Children walk a long distance to access secondary schools and most of the time learners lodge in nearby places which has led to	❖ Construction of a 1 by 3 classroom block at Chisokone Community School ❖ Construction of a secondary school

Luanshya District Integrated Development Plan 2023-2033

		high pregnancy rate among the girl child	❖ Boarding School
13.	Twashuka	❖ Children walk a long distance to access secondary schools	❖ Construction of a secondary school
14.	Chawama	❖ Long distances to access to a Primary school	❖ Upgrading of Chawama (Twalwisha) community school into Primary School,

3.3 Forestry Sector

The goal for this sector is to ensure sustainable flow of wood and non-wood forestry products and services while at the same time ensuring protection and maintenance of the biodiversity for the benefit of both the present and future generation through active participation of all stakeholders.

Luanshya District had a total of six protected forests namely Luanshya National Forest, Roan Local Forest Maposa Local Forest Masansa National Forest, Misaka Local Forest, Muva Local Forest and a research reserve namely Lufubu North Botanical Reserve. Out of these, four have since been degazetted (Roan, Maposa, Luanshya National Forest and Misaka) while the remaining ones are either undergoing excisions or earmarked for Degazetion (Masansa and Muva local forest) respectively. Figure 14 shows the Forest found in the district.

Figure 13: Forest Reserves in Luanshya District

3.3.1 Key Government Priorities Being and to be Implemented at a Local Level (Review of Policies and Plans)

Luanshya District identifies the key priority issues as they obtain in the National Forest Policy of 2015 and the 8th National Development Plan as follows;

- ❖ Strengthen climate change adaptation,
- ❖ Strengthen climate change mitigation,
- ❖ Enhance disaster risk reduction and response,
- ❖ Promote Integrated Environmental Management,
- ❖ Enhance natural resources management,
- ❖ Maintaining the socio economic and ecological benefit of forest,
- ❖ Reducing the impact of climate change and
- ❖ Community empowerment through promotion of alternative livelihoods.

3.3.2 Description of the Existing State of Development

3.3.2.1.1 Availability of Service

- ❖ **Masansa National Forest No. F3:** Total hectareage is 3,577 hectares. 2,077 hectares of the reserve is under plantations forestry by ZAFFICO while a total of 1,500 hectares is totally encroached and earmarked for excision
- ❖ **Muva Local Forest Number No. F1:** The total hectareage for this forest reserve is 3,187 Hectares. Approximately 70% of the forest reserve is encroached. Both human settlements and agriculture fields account for this percentage
- ❖ **Lufubu North Botanical reserve:** The total size of this reserve is 62.73 hectares. This is basically a research stand.

Figure 14: Forest Reserve Before and After Degazetation

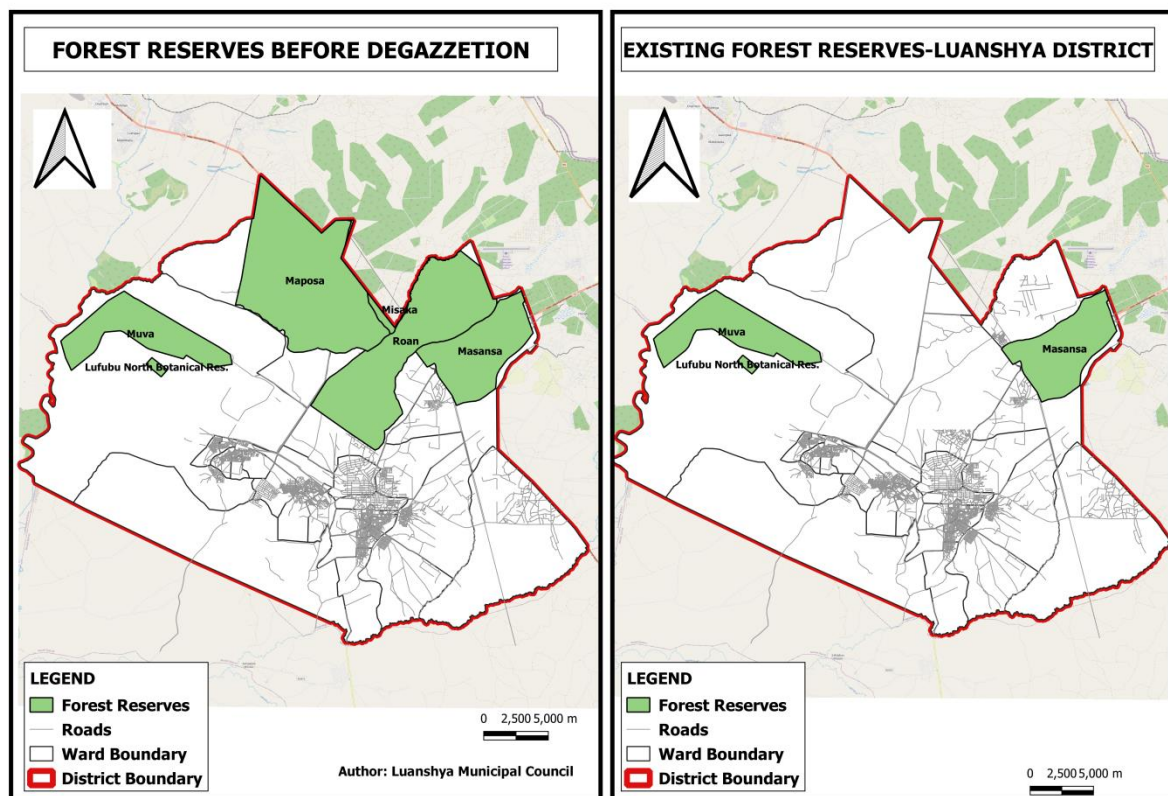

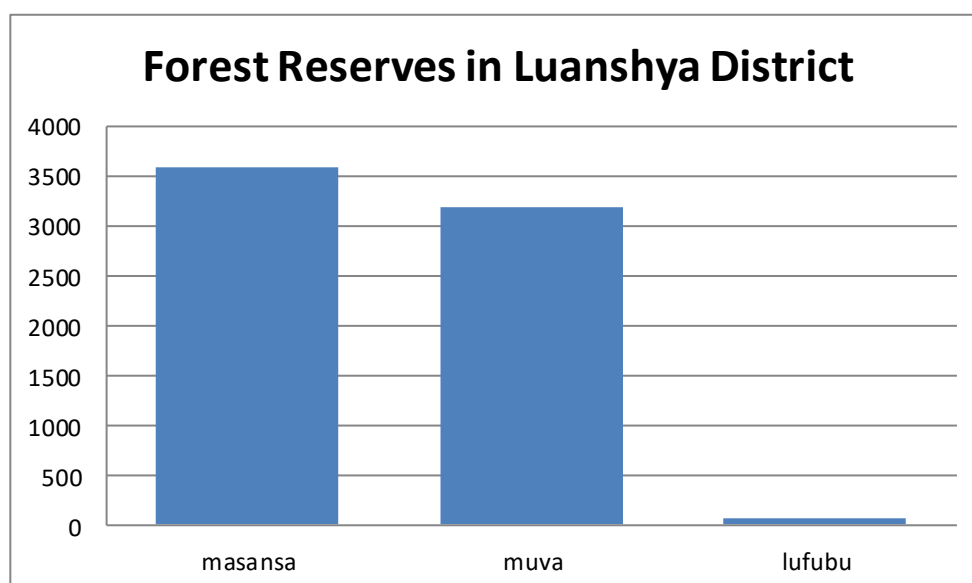

Figure 15: Graphical presentation

3.3.3 Quality of Service Including Key Indicators of Performance

- ❖ The total hectareage of land rehabilitated (afforestation and re-afforestation)
- ❖ Number of community groups participating in natural resource management programme.
- ❖ Number of Stakeholder engaged in forest management
- ❖ Changes in land cover (land cover monitoring)

3.3.4 Impact of Changes Anticipated Over the Next Ten Years

3.3.4.1 Population Change – Future Demand for Services and Facilities

The projected population in 2033 for Luanshya will be 190, 978 which entails that there will be high demand for land for agriculture and settlement development. There will be high demand for livelihoods resources such as charcoal, fuel wood and timber which will in turn affect the forest areas. There are current proposals to excise some of the forest reserves in Luanshya in order accommodate growing demand for social economic activities. Our conservation areas are expected to further reduce as highlighted in the table below.

Table 13: Demand for Land (expected impact in the next 10 years)

Reserve	Initial Size	Proposed Excision	Remaining
Masansa	3,577.55	1,500.00	2,077.55
Muva	3,187.00	1,900.00	1,287.00
Lufubu	62.73	-	62.73

Luanshya District Integrated Development Plan 2023-2033

In order to manage forest in a sustainable way, the demand for service provision will be demanded as tabulated below: -

Table 14: Future Demand

S/N	Facility	Present situation	Future demand	Coverage based on future demand
1	Office block	Nil	1	12
2	Forest camp	Nil	1	10 camp officers
3	Forest range guards	1	9	10 Camps
4	Transport (vehicle)	Nil	1	1 off road utility vehicle
5	Plantation	Nil	1	20 hectares

Figure 16: Luanshya District Tree Cover Loss

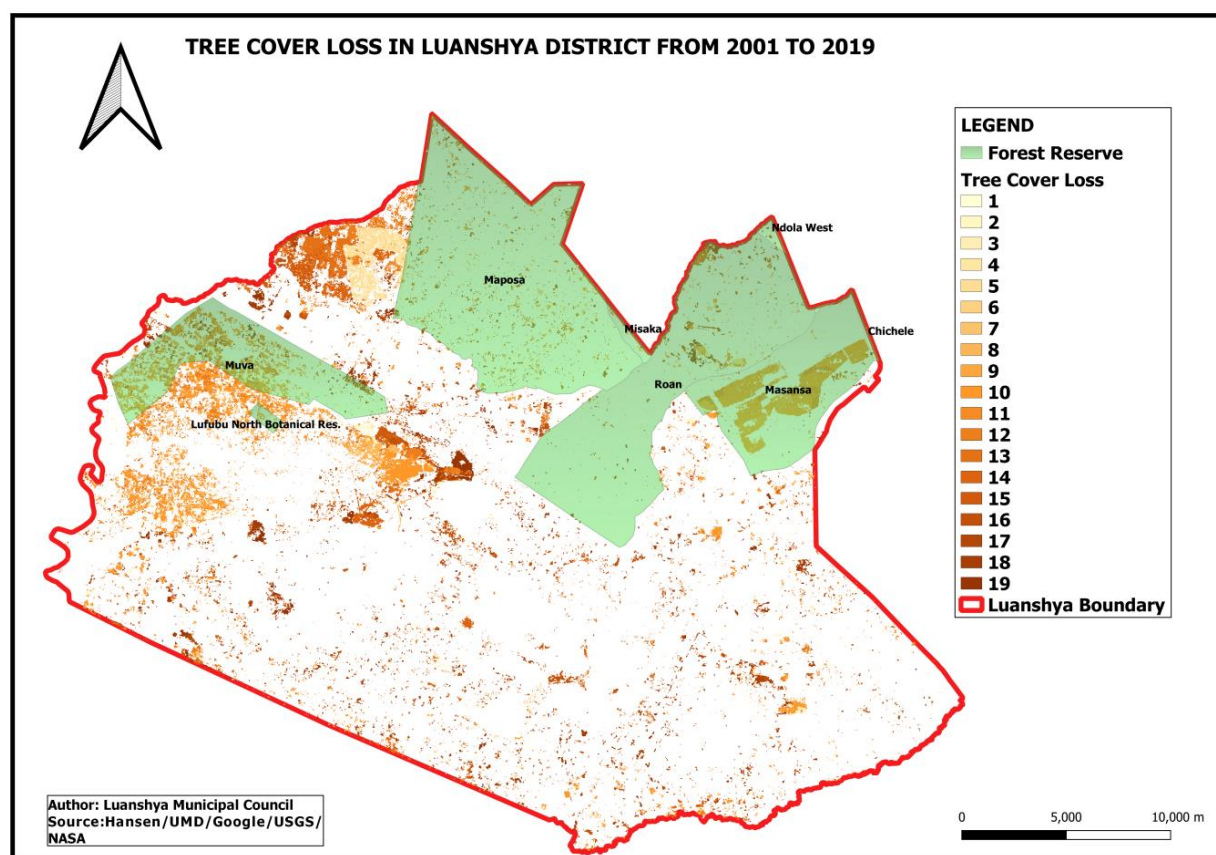

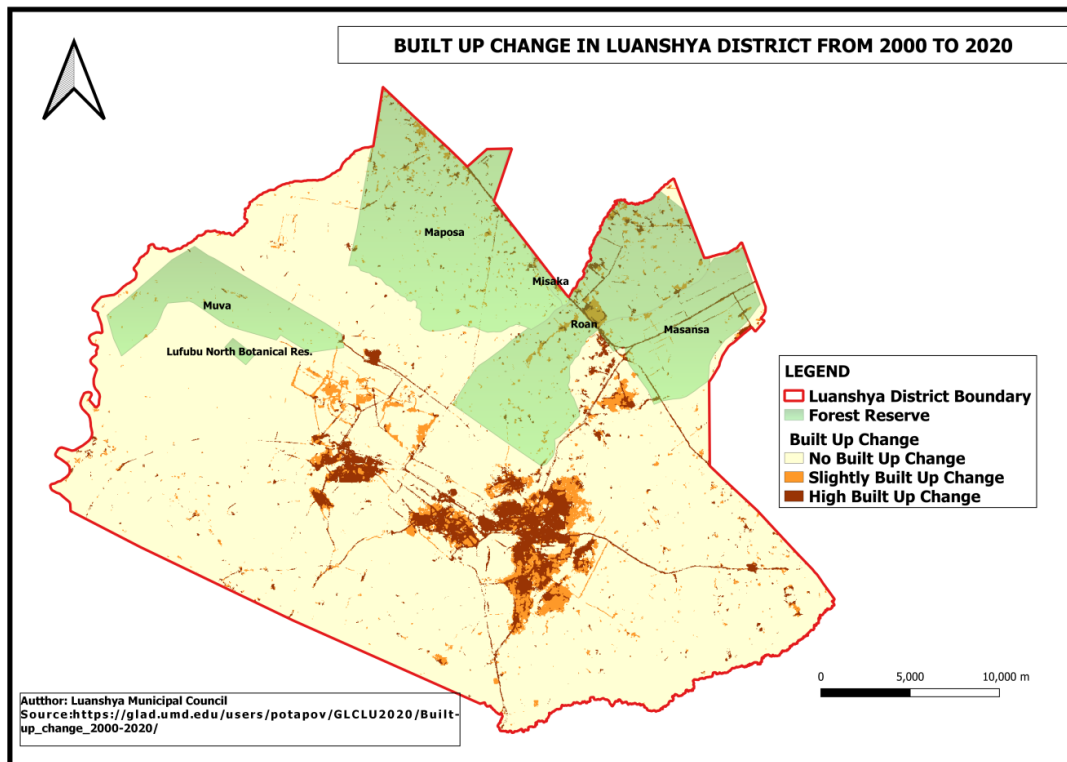

Figure 17: Luanshya District Built Up Change from 2000 to 2020

3.3.5 The Impact of the Continuation of Existing Trends on Land Use and Population Distribution Patterns

- ❖ Depletion of forest resources (Loss of Biodiversity),
- ❖ Climate variability accelerated,
- ❖ Increased vulnerability,
- ❖ Lower productivity and
- ❖ Increased poverty levels.

3.3.6 Environment and Climate Change Analysis

3.3.6.1 The Impact of Existing Trends on the Environment and Climate Change

It has been anticipated that due to population growth projected at 190, 978 for 2033 there will be too much pressure on the forest resources and products both wood and non-wood forest products for purposes of construction, charcoal production and medicinal herbs. The following are impacts of the existing trends on the environment and climate change: -

- ❖ Deforestation leading to ecological imbalances
- ❖ Land degradation leading to low productivity

3.3.6.2 The Impact of Environmental and Climate Change Issues on the Sector

The demand for energy has increased hence exerting pressure on the forestry resources. Forests have remained the most available source of livelihood due to Social vulnerability. This has resulted into unsustainable harvesting of forestry resources hence leading to deforestation, forestry degradation, loss of biodiversity and land degradation.

3.3.7 Issues Arising Relating to Gender Groups and Vulnerable Groups

- ❖ Lack of Access to production of natural resources (major forest produce) by women, and other vulnerable groups hence affecting their household income,
- ❖ Youth have limited access to major forest resources and
- ❖ Ownership and tenure arrangements (concessions) are a preserve of the few groups.

3.3.8 Summary

Currently there has been a reduction in forest estates in Luanshya District due to increased population hence the demand for forest lands for human settlements and agricultural activities. Charcoal production in the District has equally played a significant role in the reduction of these conservation areas and ultimately loss of biodiversity.

Table 15: Consideration of the Underlying Factors Contributing to the Issues Identified

S/N	Underlying Factors	Issues
1.	High level of poverty	Charcoal Production
2.	Population growth	Forest Encroachment
3.	High levels of Unemployment	Unsustainable agriculture

3.3.9 Summary – Core Problems

- ❖ High level of poverty leading to unsustainable utilization of natural resources for livelihoods (charcoal production, unsustainable harvesting of non-wood products such as fruits and caterpillars)
- ❖ Population growth leading to high demand for land for settlements, agriculture land and infrastructure development
- ❖ High unemployment levels in the country leading to unsustainable alternative livelihoods such as harvesting and trade in forestry produce and other non-wood products

3.4 Health Sector

The Health sector seeks to provide equity of access to cost effective quality health services, as close to the family as possible in a clean, caring and competent environment. It focuses on providing high quality of life for all Luanshya residents in both Peri and urban areas. The District has 2 government hospitals; 2 government mini hospitals, 1 Private hospital, 20 government health centers, 11 government health posts and 5 Private health centers. The figure below shows the distribution of health facilities in the district.

Figure 18: Location of Health Institutions in Luanshya District

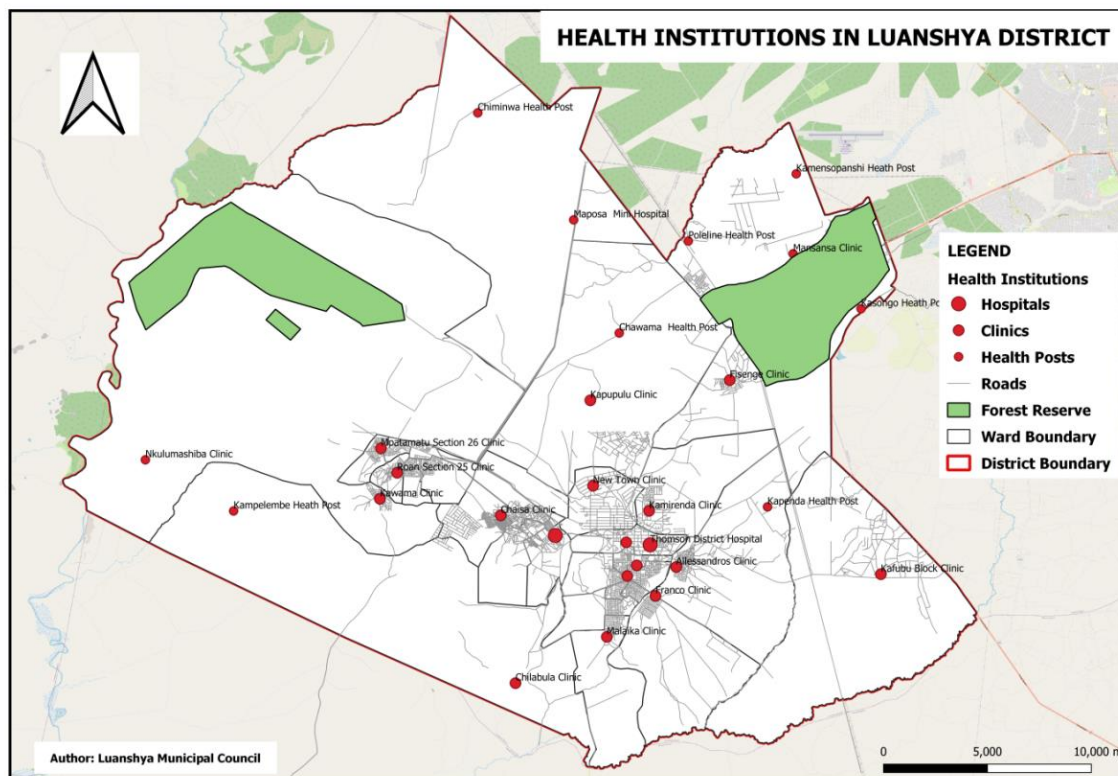

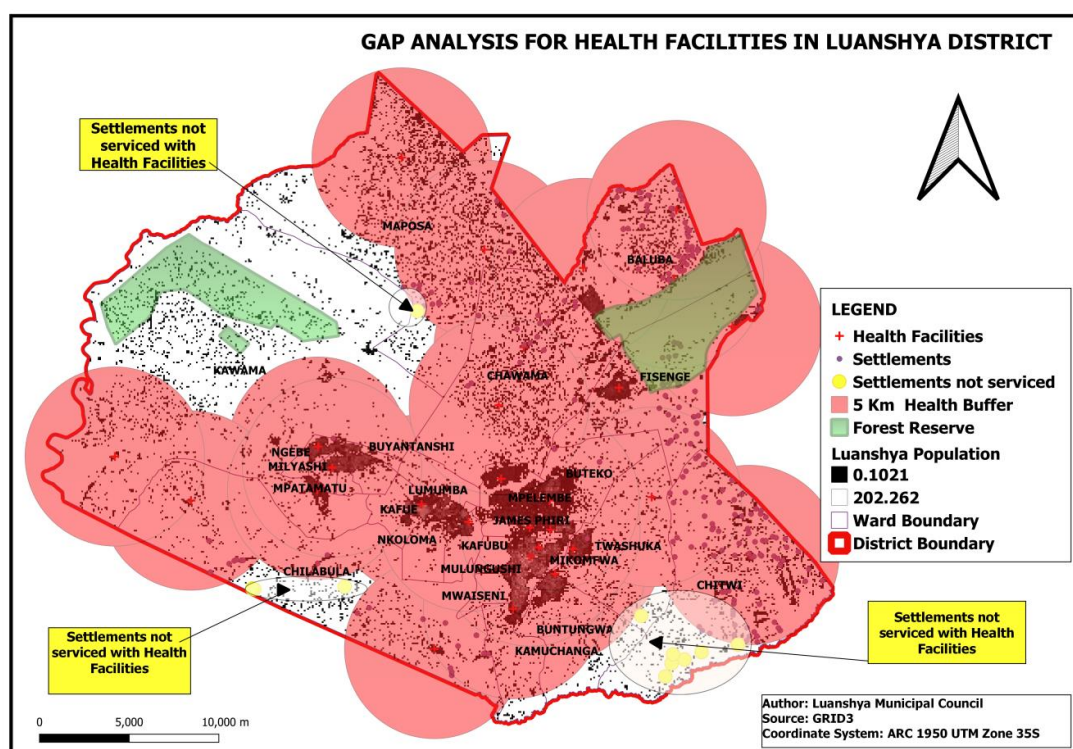

Figure 19: Gap Analysis for Health Facilities in Luanshya District

From the health gap analysis, it was revealed that out of the total population of 203 515 for Luanshya District, the population of 195 954 were serviced with health facilities whilst 7 561 was not well serviced. It was also established that a total number of 11 settlements not served with health facilities

3.4.1 Key Government Priorities Being and To Be Implemented At A Local Level (Review of Policies and Plans)

The Luanshya District health office recognises the key priority issues drawn from the 8th National Development Plan (8NDP), National health strategic plans, Vision 2030 and Action planning handbook. The following are the key health priorities-

- ❖ Strengthen Public health,
- ❖ Increase access to quality health care,
- ❖ Enhanced food security and nutrition,
- ❖ Strengthen Integrated Health Information Systems,
- ❖ Primary health care,
- ❖ Maternal, neonatal and child health, youth and adolescent health,
- ❖ Communicable diseases, especially malaria, HIV and Aids, STIs and TB,
- ❖ Non-Communicable Diseases,

Luanshya District Integrated Development Plan 2023-2033

- ❖ Disease outbreaks and epidemic control, public health surveillance,
- ❖ Environmental health and food safety,
- ❖ Health service referral systems,
- ❖ Health promotion and education,
- ❖ Community health and
- ❖ Social determinants of health such as safe housing, job security, financial stability and availability of healthy foods.

3.4.2 Description of the Existing State of Development

3.4.2.1 Availability of Service

The District has 2-first level hospitals 1 private and the other government; 1-second level hospital, 19-government health centers, 11-government health posts and 5-Private health centers. The following are the health services offered;

- ❖ Primary health care
- ❖ Management and support services

3.4.3 Quality of Service Including Key Indicators of Performance

The table below has been segregated according to the national risk groups prevailing in the 8thNational Development Plan.

Table 16: Key Indicators of Performance

Indicator	2019		2020		2021	
	Target (%)	Achieved (%)	Target (%)	Achieved (%)	Target (%)	Achieved (%)
% Under one-year children fully immunized (0-11 months)	90	110	90	101	90	94.3
% BCG coverage	90	134	90	97	90	108
% New family planning acceptors	15	9	15	12	15	10
% Pregnant women who received ANC first visit before 14 weeks	45	32	45	33	45	36.3

Luanshya District Integrated Development Plan 2023-2033

Indicator	2019		2020		2021	
	Target (%)	Achieved (%)	Target (%)	Achieved (%)	Target (%)	Achieved (%)
% Pregnant women who received focused ANC	65	36	65	55	65	66
Delivered by skilled provider	85	80	85	99	85	100
% Of pregnancy complications treated at B-EMONC facilities	50	26	50	32	50	29
% Of women attending postnatal care visit within 6 days	45	53	45	48	45	49
% Of women attending postnatal care visit within 6 weeks	60	89	60	39	60	44

Table 17: Health Indicators

Health Indicators
Indicators - Number of facilities managing children according to IMCI standards / Number of facilities. (32/32) 100% - Number of health centers where 90% of children are treated according to ITG/IMCI / Number of Health Centers (32/32) 100%, - Number of institutional deliveries during period under review/ Number of expected deliveries during period under review, 5145/7451 69%, - % Deliveries assisted by skilled attendant. 5145/5145 (100%), - Number of Facilities providing basic emergency obstetric care services being provided; 8 facilities, - Number of maternal deaths with completed MDSR forms and recommendations made/total Number of maternal deaths; (1/1) 100%, - Number of children under-5 weighing below -2Z score/ Number of children weighed 156/53522 (0.29%),

- Number of children fully vaccinated according to guidelines / Number of expected children under 6762/7140 (95%),
- Number of activities implemented to prevent malnutrition/ Number of activities planned; 5/5,
- 1 growth monitoring and provision,
- 2 cooking demonstration,
- 3 MUAC screening,
- 4 Nutrition counseling,
- 5 Nutrition Breastfeeding of infants from 0-6 months,
- Number of Health Centres accredited to provide ART /total number providing ART; 26/26
- All 3 hospitals are accredited,
- Number of persons accessing ART /total Number of eligible patients; 100%,
- Number of eligible children on ART/ Number eligible children sampled 4095/4095 (100%),
- Number of children born of HIV+ mothers who received prophylaxis/Total Number of children born of HIV+ mothers; 381/401(95%),
- Number New Pulmonary TB cases diagnosed with positive sputum/ Number of newly diagnosed TB cases; 410/1280 (32%),
- Number sputum positive TB patients started on treatment and testing sputum negative at 6 months'/ Number patients completing treatment; 333/358 (93%),
- New cases of sputum ve⁺ TB / total number of TB cases diagnosed 410/1280 (32%),
- Number of defaulters traced / Total Number defaulters 6/6 (100%),
- Number Health Centres where 80% of malaria diagnosis are lab confirmed (slide or RDT)/ Total Number of Health Centres; 32/32 (100%) RDT,
- Number of deaths attributed to confirmed malaria in children under 5/ Number confirmed malaria cases in children under 5 (4/18531),
- Number of first antenatal attendances during period under review/ Number of expected pregnancies during period under review 3176/7356 (95%),
- Number of Health Centres providing Focused /Total Number of Health Centres; 26/26,
- No. of centres providing PMTCT/total number of centres; 26/26,
- Number of first ANC women tested / total Number counselled; 3039/3039 (100%) and
- Number of HIV positive ANC clients enrolled on ART /Total Number of ANC clients tested positive; 2102/2280 (92%).

Issues Arising from the Public Participation

- ❖ Women walk a long distance to access maternity services. The mini hospital in Fisenge is not complete,
- ❖ Long distances to health posts for clients,
- ❖ High rate of malaria,
- ❖ Lack of adequate infrastructure such as houses for health staff,
- ❖ Chifulube East Health post in Kankwiba, Twashuka ward is unopened,
- ❖ Women walk a distance to access maternity services in the Peri-urban facilities,
- ❖ Long distance to clinic in Kasununu; no nearby clinic,
- ❖ Lack of a clinic in Mipundu,

- ❖ Inadequate staffing levels,
- ❖ Non-functioning Air conditioners for pharmacy,
- ❖ Lack of incinerators in facilities,
- ❖ Inadequate vaccine fridges in facilities,
- ❖ Unopened maternity wing at Misaka health post,
 - ❖ All 8 prefabricated health posts are damaged,
 - ❖ Health centers and health posts do not have wall fences and
 - ❖ Mikomfwa health center sewer line blockage.

3.4.4 Impact of Changes Anticipated Over the Next Ten Years

3.4.4.1 Population Change – Future Demand for Services and Facilities

The projected population in the next ten years (by 2033) for Luanshya District will be 190, 978, which entails that there will be high demand for Health services. These services will include; Primary health care, Environmental health and food safety, Maternal, neonatal and child health, youth, adolescent health, health promotion and education and Community health.

Focusing on the changes, we expect that in the future the following could be the anticipated required Health Facilities and the population we intend to cover.

Table 18: Future Demand

S/N	Facility	Present situation 2021	Future demand	Coverage based on future demand
1.	Health post	11	10 need to be built 5 to be upgraded to Health centres	40565
2.	Hospital	Two 1 st level hospital One 2 nd level hospital Two mini hospitals	Two Mini Hospitals One 2 nd level hospital One 3 rd Level Hospital	216351
3.	Office block at District health office	Dilapidated and inadequate office space	Construction of a modern office block	100%

3.4.5 The Impact of the Continuation of Existing Trends on Land Use and Population Distribution Patterns

With many developmental projects to be implemented under the Health Sector, it is obvious that there will be clearing and cutting down of trees. Construction of Health centres attracts settlement of people in the area, those seeking the service as well as those working in those newly built health centres.

3.4.6 Environment and Climate Change Analysis

3.4.6.1 The Impact of Environmental and Climate Change Issues on the Sector

The following have been identified as impacts of the environment and climate change on the health sector;

- ❖ High mortality rate
- ❖ Increased disease burden
- ❖ Damaged infrastructure
- ❖ Lack of access to health facilities
- ❖ Increased financial obligations
- ❖ Poor quality sanitation

3.4.7 Issues Arising Relating to Gender and Vulnerable Groups

There are a number of challenges affecting the health sector in the district. This is to a larger extent influenced by both communicable and non-communicable diseases such as malaria; tuberculosis; diabetes, Covid-19, heart diseases as well as sexually transmitted infections (STIs) including HIV and AIDS. This increased disease burden has threatened the lives, well-being and livelihood of Luanshya residents, especially women and girls.

For instance, in 2021, Luanshya district recorded an increased number of deaths due to Covid-19 compared to the previous year. This is attributed to the following factors;

- ❖ Case management did not meet the required standard of Covid-19,
- ❖ In availability of vaccine to protect them against the disease,
- ❖ Vulnerability of women and girls due to increased exposure in caring for the sick.

3.4.8 Summary

The health sector is concerned about the primary health services as well as the management and support services. It has 32 health facilities in the district and a workforce of about 700 which includes health workers and support staff. The sector has improved in the recent past

Luanshya District Integrated Development Plan 2023-2033

seeing the increase in health care service provision and support from different stakeholders. With increasing and uncertain changes in everyday living, the sector still needs the support in combating some of the new diseases faced such as Covid-19 as well as increased demand for services under its care.

3.4.8.1 Consideration of the Underlying Factors Contributing to The Issues Identified

Table 19: Challenges and needs in the wards-

Challenges	Proposed solutions
❖ Women walk a long distance to access maternity services.	❖ Construction of the Fisenge mini hospital ❖ Maternity wing in Kasongo
❖ Long distance to the health post (5KM>)	❖ Construction of a health post in Kakumba zone
❖ High incidence of malaria	❖ Compliance and adherence use of Insecticides Treated Mosquito Nets and larva source management, Indoor Residual Spraying, Intermittent Presumptive Treatment in pregnant mothers
❖ Unable to operate 24-hour service delivery due to inadequate infrastructure	❖ Construction of health staff houses
❖ Chifulube East Health post in Kankwiba, Twashuka ward is unopened ❖ Women walk a distance to access maternity services in the Peri-urban facilities	❖ Need for a clinic to be opened in Kankwiba zone ❖ Construction of a maternity wing
❖ Long distance to clinic in Kasununu; no nearby clinic	❖ Construction of a health post within the ward
❖ Inadequate staffing levels	❖ Recruitment of more health staff
❖ Non-functioning of Air conditioners for pharmacy	❖ Procurement of Air conditioners for pharmacy departments
❖ Long distance to clinic in Kasununu; no nearby clinic;	❖ construction of a clinic
❖ Inadequate transport to the nearest hospital in case of complication	❖ Procurement of ambulances
❖ Lack of a clinic nearby in Justine Kabwe ward	❖ Construction of a clinic in Justine Kabwe ward
❖ Lack of incinerators in facilities	❖ Construction of incinerators at Maposa and Mpatamatu mini hospitals, Fisenge and Thomson
❖ Lack of a clinic in Mipundu	❖ Construction of a clinic in Mipundu
❖ Lack of vaccine fridges	❖ Procurement of vaccine fridges for Muvaland, Kapupulu and Chawama
❖ Unopened maternity wing at Misaka health post	❖ Completion and furnishing of Misaka maternity wing
❖ All 8 prefabricated health posts are dilapidated	❖ Building of permanent structures
❖ Health centers and health posts do not have wall fences	❖ Construction of wall fences

Luanshya District Integrated Development Plan 2023-2033

❖ Mikomfwa health center sewer line blockage	❖ Construction of soak away
❖ Kafubu block maternity wing no water	❖ Connect the water from the clinic to maternity wing
❖ Mini hospitals have no kitchens and spacious laboratories	❖ Construct kitchen and laboratories
❖ Set up a slab for prefab at main clinic	❖ Set up a slab structure to put up a prefabricated structure for the storeroom

3.4.9 Summary – Core Problems

- ❖ High malaria incidences in Luanshya,
- ❖ Lack of incinerators in facilities,
- ❖ All 8 prefabricated health posts are damaged,
- ❖ Inadequate staffing levels especially Midwives,

3.5 Agriculture Sector

Agriculture is one of the key sectors for Luanshya economic development. The sector aims to facilitate and support a viable and competitive agriculture that assures food security and income generation at both household and national levels. This ultimately contributes to Gross Domestic Product (GDP) through a number of farming blocks that Luanshya district has, which include; Kafubu farming Block, Chilabula farming block, Maposa farming block and Roan farming block.

3.5.1 Key Government Priorities Being and To Be Implemented at A Local Level (Review of Policies and Plans)

The Agriculture sector in Luanshya District drives its priorities being and to be implemented from the 8th National Development Plan and the 2016-2020 National Agricultural policy. The following are the strategies included in the plan and policy:

- ❖ Improve agricultural production and productivity,
- ❖ Promote value addition and manufacturing,
- ❖ Promote diversification of agricultural production among small and medium scale farmers,
- ❖ Farm power and Mechanization enhancement,
- ❖ Promote efficient use of available water resource for irrigation among small scale farmers,
- ❖ Promote Climate Smart Agricultural Technologies / practices among small and medium scale farmers,
- ❖ Agriculture Infrastructure Development,

Luanshya District Integrated Development Plan 2023-2033

- ❖ Promote Value addition,
- ❖ Agro-value chain linkage promotion,
- ❖ Promotion of information dissemination on agricultural productivity,
- ❖ Promotion of Market research and Agri- businesses and
- ❖ Promotion of efficiency use of financial and human resources to enhance agricultural productivity.

There are basically 24,370 registered small and medium scale farmers in Luanshya District and those benefiting from Farmer Input Support Programme (FISP) stands at 9,021 farmers.

In terms of crop production, the table below represents averages for the five-year period (Agricultural Seasons) that is from 2014/2015, 2015/2016, 2016/2017, 2017/2018 and 2018/2019 (Central Statistics Office - CSO).

Table 20:: Crop production

Crop	Five Years Average of Area Planted (ha)	Five Years Average of Expected Production (MT- Metric Ton)	Five Years Average Yield (ha)
Maize	3,164.79	7524.12	3.14
Sorghum	0.87	0.32	0.18
Rice	0	0	0
Millet	0.21	0.14	0.18
Sunflower	0.91	1.18	0.37
Groundnuts	426.37	438.69	0.83
Soya Beans	312.75	108.85	0.52
Mixed Beans	49.74	34.66	0.60
Bambara Nuts	6.70	8.12	0.98
Sweet Potatoes	74.35	269.52	3.14
Popcorn	36.93	30.24	0.78

Luanshya District Integrated Development Plan 2023-2033

Table 21: Agriculture future demands for services

S/N	Category	Present situation	Future demand	Coverage based on future demand
1.	Motorbikes	12	32	32 field officers
2.	Office Block	0	1	All district staff
3.	Housing units	4	20	20 field officers
4.	Motor Vehicles	1	4	Administration, Extension, Agri-Business, NAIS,
5.	Field Surveys	0	2	All agricultural camps
6.	Field Staff Agriculture Assistance and Supervisors	20	20	24,370 farmers

3.5.2 Description of the Existing State of Development

3.5.2.1 Availability of Service

The following are the available services provided by the Agriculture sector in Luanshya district:

- ❖ Agriculture Extension services
- ❖ Farmer Input Support Programme
- ❖ Conduction of District Agricultural Shows
- ❖ Conduction of Field days

Table 22: Quality of Service Including Key Indicators of Performance

S/N	Types of Service	Quality of Service	Indicator
01	Farmer Input Support Programme	Good	Increased crop production and Household food security
02	Conduction of District Agricultural Shows and field days	Good	Smooth technology transfer and adoption among farmers.
03	Agriculture Extension services	Good	Increased crop production and yield

3.5.3 Impact of Changes Anticipated Over the Next Ten Years

3.5.3.1 Population Change – Future Demand for Services and Facilities

The projected population in ten years' time (2033) for Luanshya will be 190, 978 which entails that there will be high demand for extension services. These will include field extension staff, motorbikes, office block, motor vehicles, field surveys and housing units.

Table 23: Agriculture future demands for services

Luanshya District Integrated Development Plan 2023-2033

S/N	Category	Present situation	Future demand	Coverage based on future demand
1.	Motorbikes	12	32	32 field officers
2.	Office Block	0	1	All district staff
3.	Housing units	4	20	20 field officers
4.	Motor Vehicles	1	4	Administration, Extension, Agri-Business, NAIS,
5.	Field Surveys	0	2	All agricultural camps
6.	Field Staff Agriculture Assistance and Supervisors	20	20	24,370 farmers

3.5.4 The Impact of the Continuation of Existing Trends on Land Use and Population Distribution Patterns

As the population of Luanshya District continues to grow the demand for agricultural produce also keep on rising, and the impact on the agriculture land use will definitely be felt. Satisfying increased demands for agricultural produce in the district is likely to lead to more demand for land for production, and this will entail clearing huge tracts of land for establishment of farm blocks, irrigation facilities and enhancement of extension services in the district.

3.5.5 Environment and Climate Change Analysis

3.5.5.1 The Impact of Existing Trends on the Environment and Climate Change

As population of Luanshya increases the demand for land for agriculture purposes will also increase. This will entail clearing and cutting down of trees for establishment of farm blocks and irrigation facilities in the district. The following are the impact of the existing trends on the environment and climate change: -

- ❖ Deforestation due to agriculture activities,
- ❖ Land degradation leading to low productivity,
- ❖ Droughts due to change in climate,
- ❖ Floods,
- ❖ Increased pests' activities and
- ❖ Reduced water table in Natural water bodies.

3.5.5.2 The Impact of Environmental and Climate Change Issues on agriculture Sector

Climate change comes with extreme temperature and unpredictable weather patterns. Droughts and flash flooding are now common countrywide and Luanshya is not spared. Changes in temperature have brought about the outbreak of crop diseases, non-drought tolerant crops are

failing. There has been massive land degrading rendering the land unproductive. The ultimate resultant effect has been low production and productivity.

3.5.6 Issues Arising Relating to Gender and Vulnerable Groups

- ❖ Reduced household food security and income.
- ❖ Increased Poverty among women and youths.

3.5.7 Consideration of the Underlying Factors Contributing to the Issues Identified

- ❖ High level of poverty,
- ❖ Population growth,
- ❖ High levels of Unemployment,

3.5.8 Summary – Core Problems

- ❖ Low crop yield and production
- ❖ Low crop diversification
- ❖ Limited value addition
- ❖ Lack of market research and agri-business

3.6 Fisheries and Livestock Sector

Livestock production encompasses cattle production (both dairy and beef), sheep, goats, piggery and poultry. In cattle production, the District has been one of the major producers of milk in the province. The dairy sector has an organized market system where farmers supply milk to milk collection centers for market. Average milk production has been 1.2 million liters of milk per annum. Another organized marketing system is poultry especially village chickens. The farmers through different cooperatives have formed a union that is spearheading marketing sources and negotiate an economical price for individual farmers. Other livestock and aquaculture have uncoordinated market system that has affected production among other factors, a situation that needs attention in order to achieve the vision 2033 for the District.

3.6.1 Key Government Priorities Being and To Be Implemented at A Local Level (Review of Policies and Plans)

The Fisheries and Livestock Strategic Plan 2020 -2022 have four main strategic themes and 12 strategic objectives as highlighted in the table below.

Table 24: Strategic themes and strategic objectives

SN	Strategic Theme	Strategic Result	Strategic Objective
1	Fisheries and Livestock Development	Optimal Fisheries and Livestock Production	1. To enhance sustainable fisheries and livestock production and productivity, 2. To promote fisheries and livestock stocking and restocking, 3. To strengthen fisheries and livestock research and development (R&D), 4. To enhance fisheries and livestock extension and advisory service delivery,
2	Animal health excellence,	Healthy Animal Populations	• To enhance animal health management, • To improve animal welfare,
3	Fisheries and Livestock agribusiness and marketing development and	Increase fisheries and livestock trade and exports	• To enhance fisheries and livestock value chain, • To improve access to finance for production and export,
4	Operational Excellence.	High Quality Services	• To strengthen the policy and legislative framework, • To improve institutional and operational capacity, • To improve infrastructure and equipment, • To enhance fisheries and livestock information management system.

3.6.2 Description of the Existing State of Development

3.6.2.1 Livestock Development

A number of interventions have been done though more need to be done to address the production and productivity of livestock sector and subsequently achieve the District vision 2032.

3.6.2.1.1 Dairy Farming

Dairy farming is done through organised cooperatives that have further aggregated into unions. The organisation has made it possible and easy for farmers in the dairy business. To support the sector, the government has constructed two more milk collection centres bringing a total number to four in the District. Farmers have further been assisted on and off farm milk handling technologies and also understanding the concept of dairy farming as a business. This has been done in collaboration with the Zambia Dairy Transformation Programme, a project funded by the Government of the Republic of New Zealand. Under the Livestock Development and

Animal Health Project (LDAHP) twelve cooperatives were supported with funds to invest into the dairy farming.

3.6.2.1.2 Village Chicken Value Chain

The farmers have equally been organised in the manner the dairy sector has been. A union has been formed by a number of cooperatives. This has made it easy for extension service delivery to the farmers on new technologies aimed at improving production and productivity. Market access by farmers is improving and a road map is to reach a point of being able to add value by establishing processing plant for the local chicken. The District has been working with Agricultural Technology Demonstration Centre through Technoserve Organisation under the support of Bill and Melinda Gates Foundations.

3.6.2.1.3 Pasture Production

Livestock production is facing a challenge of high cost of production. High cost of stock feed is greatly affecting production negatively, hence compromises profitability. In mitigating this problem, the District has about 100 farmers engaged into pasture production and folder conservation. Six of the farmers were trained to be seed growers for the pasture. This programme is being facilitated by the Government in conjunction with International Fund for Agricultural Development (IFAD) under the project called Enhanced Smallholder Livestock Investment Programme (ESLIP).

3.6.2.1.4 Piggery, sheep and Goats Production

The two among others do not have a good production level. The market system is not well organised that can steer up production and productivity. The district endeavours to improve production and productivity of the sub-sector under the promotion of livestock diversification agenda.

3.6.2.2 Veterinary Services

3.6.2.2.1 Livestock Disease Situation

The District has several diseases. The diseases are categorised as schedule disease, which are disease of economic importance and none scheduled diseases which are managerial diseases (diseases that occur mostly due to compromised management). Some selected diseases have been listed in the tables below;

Table 25: Scheduled diseases

Disease	Livestock Affected	Level of Occurrence	Control Measures
Babesiosis	Cattle, goats, sheep	Low	Dipping, treatment
Heartwater		Low	Dipping, treatment
Lumpy skin		Medium	Vaccination, treatment
Therelliosis		Low	Dipping, treatment
East Coast Fever		Low	Dipping, treatment
Dermatophilosis	Bovine	High	Dipping, treatment
Infectious Bronchitis Disease	Poultry	High	Hygiene, treatment
Chronic respiratory disease	Poultry	High	Hygiene, treatment
Fowl pox	Poultry	High	Vaccination, treatment
Gumboro	Poultry	High	Vaccination, treatment
Newcastle	Poultry	High	Vaccination, treatment
Coccidiosis	Poultry	High	Hygiene, treatment
Infectious coryza	Poultry	High	Vaccination, treatment
Rabies	Dogs, cats, Cattle, goats, sheep	Low	Vaccination

Table 26: None-scheduled diseases

Disease	Species	Level of occurrence	Control measures
Helminthiasis	Cattle, Goats, Sheep, Pigs, Poultry	High	De-worming
Mange	Goats, Sheep, Pigs,	High	De-worming
Foot rot	Bovine	Low	Treatment
Heat stress	Poultry	High	Ventilation of poultry house, treatment
Mastitis	Cattle	Low	Treatment
Ascites	Poultry	High	Temperature control of poultry house, treatment
Parvo Virus Enteritis	Dogs	High	Vaccination, treatment
Omphalitis	Avian	High	Hatchery hygiene
Peritonitis	Avian	High	Treatment

Luanshya District Integrated Development Plan 2023-2033

Table 27: Livestock population per veterinary camp

Camp	Bovine (Cattle)								Goats	Sheep	Pigs	Local Chickens
	Beef cattle						Dairy Animals	Grand Total Cattle

3.6.2.3 Aquaculture Development

The performance in aquaculture is very low despite the District having a lot of potential to produce more. The average production per annum has been around 15 tons. This is very low compared to the District population. The situation has led the District to import fish from other Districts within and outside the Province. It has further promoted indiscriminate and illegal fishing in community dams and streams. It has contributed to over fishing of other natural bodies from the neighbouring District like Mpongwe as Luanshya District provides ready market the fish.

Measures are being employed to address the situation. The Government has through Citizen Economic Empowerment Commission (CEEC) given financial capital to 26 farmers in the first phase to venture into fish farming. Each farmer is expected construct two ponds of 20m x 30m (standard size for economic production).

Enhanced Smallholder Agribusiness Promotion Programme (ESAPP) is yet another project in the district. It has so far recruited 575 farmers. The farmers have been trained on business concepts and production management of aquaculture through what are called Farming as a Business Schools (FaaBS). The project seeks to address the challenges faced in aquaculture like:

- ❖ Unavailability of quality fingerlings by establishing fish hatchery,

Luanshya District Integrated Development Plan 2023-2033

- ❖ Weak and inconsistent market system of farmed fish by providing marketing centres with cold rooms,
- ❖ High cost of fish feed by establishing feed processing plants,
- ❖ Low fish production, by providing farmers with capital to produce fish. Each of the recruited farmers will construct two ponds of 20m x 30cm.

Table 28: Fish production, consumption and deficit for Luanshya district

Number of farmers	Number of ponds	Annual fish production (kg)-average	District population	Standard Per capita fish consumption (kg)/annum	Kg of fish required for District	Deficit
150	451	15000	156,059	12	1, 872, 708	1, 857, 708

3.6.3 Issues Arising from the Public Participation Process

3.6.3.1.1 Low production and productivity of livestock and fish

Several factors have been identified to be contributing to the low production and productivity in the sector:

Water Supply: the dry season has seen limited water supply for livestock. This is usually the case when the streams and damboos dry out. Larger animals (cattle, especially dairy) have been badly hit as water forms a big component of milk. Aquaculture production has also been affected limiting the farmers to run only one cycle against a potential of two cycles per year.

High cost of inputs supplies: the prices of stock feed, fish feed and veterinary drugs have proven uneconomical to the small-scale farmers. A number of farmers have been failing to meet the costs and hence affecting productivity and profit.

Livestock Diseases: The District records a number of diseases both scheduled and non-scheduled diseases. Though most of the diseases are managerial, production and productivity have to some much extent been affected. Tick borne diseases, Lumpy Skin disease, Newcastle diseases, Gumboro, are some of the common scheduled diseases that have been recorded in the district.

Weak Market System: the market system for most livestock and livestock products has been weak and inconsistent. Apart from milk product which has a well-structured market system,

Luanshya District Integrated Development Plan 2023-2033

the rest have no well-structured market system that has led into variation in prices. This affects profitability and subsequent minimal sustainability of the ventures for the small-scale farmers.

Extension Service Provision: the services have in most cases not been adequate. There are low staffing levels coupled with low funding and inadequate transport that have resulted into limited contact with farmers. Furthermore, unavailability of housing units in the veterinary camps affects quality extension delivery.

Inadequate Livestock Centres: Livestock Centres are very vital in extension service delivery and access to market by farmers and other key services. Unavailability therefore has a negative impact on the development of the sector.

Lack of Artificial Insemination Satellite and Breeding Centres: Artificial Insemination and Breeding Centres give farmers an opportunity to access improved livestock breeds that can improve production and productivity. Without such services, farmers are subjected to the breeding of livestock with poor quality traits. Inbreeding is further eminent resulting into poor performance.

Fish Hatchery: untimely and inadequate supply of quality fingerlings has been one of the biggest challenges in aquaculture development. A number of farmers are re-cycling fingerlings from the previous production cycles. This has resulted into low production and productivity.

3.6.4 Impact of Changes Anticipated Over the Next Ten Years

3.6.4.1 Population Change – Future Demand for Services and Facilities

Table 29: anticipated change over the next ten years

S/N	Category	Present situation as at 2021	Future demand-addition	Coverage based on future demand
1	Artificial insemination satellite	Nil	1	20, 000 cattle
2	Fish hatchery	Nil	1	2,000 farmers
3	Water points for livestock	Nil	21 boreholes	20, 000 cattle
4	Office block	2 (small and old)	1	30 officers
5	Transport Vehicles	Nil	4	30 district staffs
	Motor bikes	9	8	17 field staffs
6	Housing units for front line staffs	1	17	7000 farmers (livestock and aquaculture)

Luanshya District Integrated Development Plan 2023-2033

7	Milk collection centres	2	2	5000 livestock farmers
8	Level two livestock centres	Nil	1	5000 livestock farmers

3.6.4.2 The Impact of the Continuation of Existing Trends on Land Use and Population Distribution Patterns

- ❖ High demand for grazing land will lead to diminishing grazing land hence low livestock production. Farmers need to invest into production of improved pasture that gives high yield from a relatively smaller parcel of land to effectively feed the animals. On average, famers have about 3 to 5 hectares from which are doing some integrated farming (growing of crops, rearing livestock and aquaculture)
- ❖ Increase in livestock and aquaculture diseases. Improved management systems and breeds of both livestock and fish will help control the prevalence of some disease,
- ❖ Continued low production and productivity of fish and livestock will lead into inadequate food and nutrition security for the district.

3.6.5 Environment and Climate Change Analysis

3.6.5.1 The Impact of Existing Trends on the Environment and Climate Change

- ❖ Depletion of district range land and loss of biodiversity. This has contributed to global warming.

3.6.5.2 The Impact of Environmental and Climate Change Issues on the Sector

Persistent droughts have resulted in dwindling water levels in both manmade and natural water reservoirs, streams and damboos. This has impacted negatively on livestock and aquaculture industries that totally depend on water. Luanshya is an upcoming livestock and aquaculture production District. The disrupted annual water supply or availability has resulted into fish farmers failing to run the required two cycles per year making farmers mostly running just a cycle per year. This kind of production system has a negative impact on production and productivity of the sector. Dairy which is one of the lucrative ventures and whose milk production requires substantial amount of water for the animals, the productivity is equally affected. Water harvesting, and storage techniques need to be developed for the livestock and aquaculture sectors to thrive amidst the effects of climate change.

3.6.6 Issues Arising Relating to Gender and Vulnerable Groups

- ❖ Ownership of livestock (dairy and poultry) is biased towards women,

- ❖ Due to the high cost of investment in this sector of livestock and aquaculture, vulnerable groups have minimal participation without any support,
- ❖ People living with disabilities are equally affected due to limited access to empowerment despite possessing potential to equally participate,
- ❖ A larger proportion of male gender dominates the aquaculture sector though women are not very much left out,
- ❖ Pasture and folder production are biased towards women owing to the fact that are a gender more in dairy farming,

3.6.7 Summary

Despite the low productivity exhibited in the district, there is great potential for the district to bridge up the deficit. The farmers are beginning to take livestock and aquaculture as a business. The participation of women in the two sectors is encouraging. The government policies to improve the sectors give a positive possibility to bridge up the deficit. Despite the changing climate, the District has a number of Damboos and streams that provide water source though not all may be perennial. Agro-forest among other smart agricultural practices will greatly mitigate the effects of climate change.

Table 30: Summary – Core Problems (for the entire PSIR)

Core Issue (S)	Contributing Factors
Low production and productivity of livestock and fish in the District	1. High cost of inputs supplies (stock feeds, veterinary medicines), 2. Livestock diseases, 3. Inadequate extension service delivery, 4. Inadequate water supply for livestock and aquaculture production, 5. Inadequate livestock service centers, 6. Lack of Artificial Insemination Satellite and Breeding Centers, 7. Lack of Fish Hatchery for provision of quality fingerlings, 8. Weak market system of fish and livestock products

3.7 Community Development and Social Services

Community Development and Social Welfare social protection contribute to sustainable human development and therefore important to sustainable development of Luanshya District. The sector fosters poverty reduction through empowering the vulnerable but viable households to improve quality of life in the District. Currently, these services are coordinated by Departments of Social Welfare and Community Development.

3.7.1 Key Government Priorities Being and to Be Implemented at a Local Level (Review of Policies and Plans)

Community development and social services in Luanshya District recognises the key priority issues drawn from the 8th National Development Plan (8NDP), under pillar two which is poverty and vulnerability reduction.

- ❖ Improved Coordination of Social Protection Programmes
- ❖ Enhance welfare and livelihoods of poor and vulnerable people
- ❖ Reduce developmental inequalities
- ❖ Reduce vulnerability associated with HIV and AIDS

The high levels of poverty and vulnerability, which usually affect more women than men, provide a strong justification for the need for social protection programmes in the District. In order to enable poor people to cope with present needs, the district is implementing Social Protection programmes such as Food Security Pack, Social Cash Transfer and MSMEs access to Finance promotion (Village Banking (Soft Loan)

3.7.2 Description of the Existing State of Development

3.7.2.1 Availability of Service

The following are the available services provided by the sector in Luanshya district:

- ❖ Disbursement of Social cash transfer,
- ❖ Bursaries recommendation to the vulnerable,
- ❖ Provision of Food Security Pack,
- ❖ Provision of Village Banking services and
- ❖ Provision of Non-Formal Education.

Table 31: Quality of Service Including Key Indicators of Performance

S/N	Type of Service	Quality of Service	Indicator
1	Disbursement of Social cash transfer	Fair (3948 on social transfer	Number of beneficiaries
2	Bursaries recommendation to the vulnerable.	Good (580 bursary recommendation).	Number of vulnerable recommended.
3	Provision of Food Security Pack	Fair (2000 beneficiaries of FSP	Number of beneficiaries benefited
4	Provision of Village Banking services	Fair (96 benefiting from village banking services).	Number of vulnerable women benefiting
5	Provision of Non-Formal Education	Poor	Number of women able to read and write.

3.7.3 Impact of Changes Anticipated Over the Next Ten Years

3.7.3.1 Population Change – Future Demand for Services and Facilities

The projected population in ten years' time for Luanshya District will be 190, 978 which entails that there will be high demand for social protection services such as; Social cash transfer, Bursaries for vulnerable, Provision of Food Security Pack, Provision of Village Banking services and Provision of Non-Formal Education services. With the increased population, the sector will also need the following to meet the demand:

- ❖ Increased beneficiaries on social cash transfer
- ❖ Increased number of CWACS, food security committees, motorbikes, office space, motor vehicles and housing units.

Table 32: Shows demand on services.

S/No	Programme	Present Situation (2021)	Future Demand
1.	Food Security Pack (FSP)	2000	1 0,000
2.	Village Banking (Soft Loan)	96	1200
3.	Office block	Nil	1

3.7.3.2 Existing and Proposed Investment and Development Programmes

- ❖ Food Security Pack (FSP),
- ❖ Village Banking (Soft Loan),
- ❖ Constructing of office block and
- ❖ Social cash transfer.

3.7.4 The Impact of the Continuation of Existing Trends on Land Use and Population Distribution Patterns

- ❖ Increased agricultural activities and ultimately high demand for land and natural resources and
- ❖ Expected population boom in areas that are benefiting from the programs due to availability of resources.

3.7.5 Environment and Climate Change Analysis

3.7.5.1 The Impact of Existing Trends on the Environment and Climate Change

- ❖ Increased poverty levels,
- ❖ Increased number of vulnerable households and
- ❖ Limited access to basic social services.

3.7.5.2 The Impact of Environmental and Climate Change Issues on the Sector

The following are the Environmental and Climatic Change issues impacting on the sector: -

- ❖ Increased poverty levels,
- ❖ Increased number of vulnerable households and
- ❖ Limited access to basic social services.

3.7.6 Issues Arising Relating to Gender Groups and Vulnerable Groups

The following are issues relating to Gender and vulnerable Groups in Luanshya District;

- ❖ Increased cases of Sexual Gender Based Violence,
- ❖ Children running away from homes to the streets in search of food,
- ❖ Less participation in socio economic activities by the vulnerable groups and
- ❖ Limited income generating activities.

3.7.7 Summary

The department of social welfare and community development are partners in implementing social protection programmes, the department of social welfare directly implements, social cash transfer, education support, repatriation, bursary recommendation, and medical support, juvenile delinquency, inspection of child care facilities and the aged people facilities while the community development implements: food security pack, village banking and non-formal education programmes in the district.

3.7.8 Consideration of the Underlying Factors Contributing to the Issues Identified

- ❖ High level of poverty,
- ❖ Population growth and
- ❖ High levels of Unemployment.

3.7.9 Summary – Core Problems

- ❖ Poverty; no activities to women and youth,
- ❖ Street kids, orphans, early marriages; caused by premature death due to HIV/Aids,
- ❖ Population increase having an impact on the number of vulnerable groups such as the aged and
- ❖ High unemployment levels in the country leading to high vulnerability.

3.8 Water Resources Development

With the change in climate and rainfall pattern that have affected various sectors including agriculture, energy and environment, there is need to strengthen strategies of water

development and management. There is a pressing need for water harnessing in the District as the Country is focusing on going the agricultural way to improve the economy, in which water is the most important resource. However, the fugitive nature of water makes it costly to harness because it requires the construction of reservoirs. Rain fed agriculture is becoming unreliable because of the change in the rainfall pattern. To boost the economy Zambians are being encouraged to invest in agriculture especially irrigated agriculture which can only be made possible if the water resources are secured.

Groundwater, though believed to be the most reliable source of safe and clean water, it is equally prone to contamination. If interventions to provide safe water are to be achieved, there is need to intensify monitoring of both surface and groundwater quality. However, monitoring of water resources alone is not enough, there is need to consider monitoring of possible contaminates. Where safe and clean water is provided, good sanitation and hygiene practices are maintained, women and children spend less time in fetching water and focus on other activities. They begin to spend more time on cleaning their surroundings, maintaining good sanitation and engaging in useful economic activities. No water, no agriculture, no development, no life.

3.5.1 Key Government Priorities Being and to Be Implemented at a Local Level (Review of Policies and Plans)

Water Resources Development in Luanshya District recognises the key priority issues drawn from the 8th National Development Plan (8NDP).

- ❖ Enhance management and productive use of water resources

3.5.2 Description of the Existing State of Development

3.5.3 Availability of Service

The following are the specific functions of DWRD:

- ❖ Construct, rehabilitate and maintain water resources infrastructure to harness water resources for use;
- ❖ Formulate and review water resources development strategy and action plans in order to facilitate resource mobilization and attainment of set objectives;
- ❖ Conduct exploratory research and surveys on the availability of water resources to facilitate their development;

Luanshya District Integrated Development Plan 2023-2033

- ❖ Provide technical guidance and support to stakeholder institutions on matters relating to water resources development in order to ensure effective utilization;
- ❖ Collaborate with Stakeholders in planning and implementation of water resources development programmes in order to ensure a harmonized approach to programme execution;
- ❖ Conduct research on water development related issues in order to facilitate evidence-based planning and decision making;
- ❖ Maintain a comprehensive geo-spatial database on dams and exploratory boreholes to facilitate storage and retrieval of information for decision making;
- ❖ Facilitate the development and review of policies and legislation on water to provide an appropriate framework for the effective management and implementation of programmes;
- ❖ Monitor and evaluate the implementation of programmes and projects in order to recommend appropriate interventions and ensure attainment of set goals;

Table 33: Shows surface water resource (Dams)

S/N	Name of the Dam	River/ Stream	Tributary	Type of River/ Stream	Constituency	Ward	Land Ownership
1	Mikomfwa	Mikomfwa	Luanshya	Perennial	Luanshya	Chifulube	State
2	Fisenge (Weir)	Fisenga	Luanshya	Perennial	Luanshya	Fisenge	State
3	Makoma	Un named	Luanshya	Perennial	Roan	Chilabula	State
4	Mushinshe	Mushinshe	Kafubu	Perennial	Luanshya	Chitwi	State
5	Philis	Baluba	Kafue	Perennial	Roan	Misaka	Private
6	Riverdale	Luanshya	Kafue	Perennial	Roan	Misaka	Private
7	Ngwane/ Mukuka	Luanshya	Kafubu	Perennial	Roan	Misaka	Private
8	Golden lay	Fisenge	Luanshya	Perennial	Luanshya		Private
9	Johnken	Maposa	Baluba	Perennial	Roan	Misaka	Private
10	Chitwi (ZCS)	Chitwi	Kafubu	Perennial	Luanshya	Chitwi	State

3.5.5 Impact of Changes Anticipated Over the Next Ten Year

The projected population in ten years' time for Luanshya will be, 190, 978 which entails that there will be high demand for water as a resource, resulting into more boreholes being drilled and more dams constructed to meet demand.

3.5.6 The Impact of the Continuation of Existing Trends on Land Use and Population Distribution Patterns

Urban development, deforestation, and draining of wetlands expedite surface runoff and thus reduce groundwater recharge and increases siltation of dams and streams.

3.5.7 Environment and Climate Change Analysis

Increased demand for fresh water due to the warming associated with climate change. Increased temperature has led to huge amount of water been extracted from natural reservoirs (rivers and ground water).

3.5.8 Issues Arising Relating to Gender Groups and Vulnerable Groups

The promotion of gender equity and equality means equitable access to quality water, which will in turn translate into enhanced human capital for sustainable development.

3.5.8 Summary

In Summary all the issues mentioned in the strategic plan can only be attained if we get support from our cooperating partners. Teamwork and Cooperation from all stakeholders is needed because water is a very vital resource, as good health and agriculture depends on availability of water.

3.5.9 Summary – Core Problems

- ❖ Uncontrolled drilling of boreholes.
- ❖ Encroachment on water recharges zones.
- ❖ Irregular maintenance and rehabilitation of some dams

3.9 Energy Sector

Luanshya District uses electricity as the main source of Energy and it's supplied either using Copperbelt Energy Corporation (CEC) and ZESCO LTD. CEC supply power to Luanshya Copper Mines (LCCM) whilst ZESCO LTD supplies power to the Industrial, Farming and Residential areas.

ZESCO Limited has four main substations for supplying power namely Munic, Power Plant (in the mine), 28 shaft and Maposa.

The District has a total number of about 26,220 residential houses connected to the ZESCO power supply network as at 30th March 2020. This figure represents electrification of 74% households. The high percentage of electrification is more in the urban area of the District.

Luanshya District Integrated Development Plan 2023-2033

Most of the peri-urban area of the District remains not connected to the ZESCO power distribution networks.

The District has high, medium and low-cost areas, thus the energy consumption for heating is largely charcoal and wood. The urban area represents 85% of the charcoal used and 15 % peri urban. The other forms of energy such as coal, biomass and solar are negligible. The District has a total number of eight (8) filling stations.

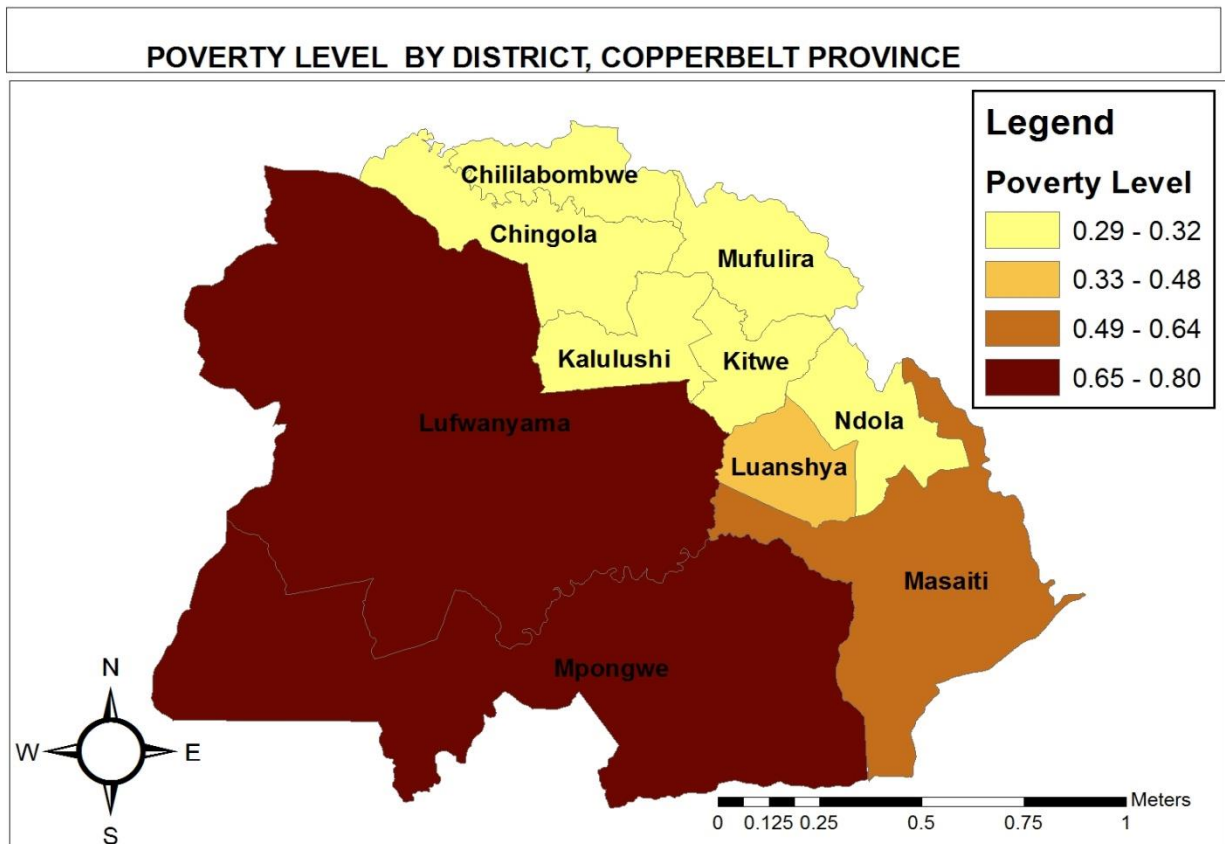

Table 34 : Substations for the District and the areas supplied

SN	Substation	Area
1	Munic	Municipal, Kamirenda, Mikomfwa, Chitwi Farming Block, Buntungwa, Walale,Mwanshani, Kambilombilo
2	Power Plant	Mine Area, Town Centre, Part Municipal
3	28 Shaft	Mpatamatu, Roan, Kawama
4	Maposa	Maposa, Fisenge, Misaka, Baluba

4 POVERTY ASSESSMENT

According to the 2015 World Bank report on mapping sub National poverty in Zambia, the poverty level for the Luanshya District was estimated to be 52,295 persons. Figure 22 shows the levels of poverty in the Copperbelt Province, and the Poverty rate for Luanshya, which is estimated to be in the range of 49 percent to 69 percent of the population. Figure 10 shows poverty level in Luanshya District using the CSO poverty measurement method.

Figure 20 : Poverty Map showing level of poverty by district, Copperbelt Province

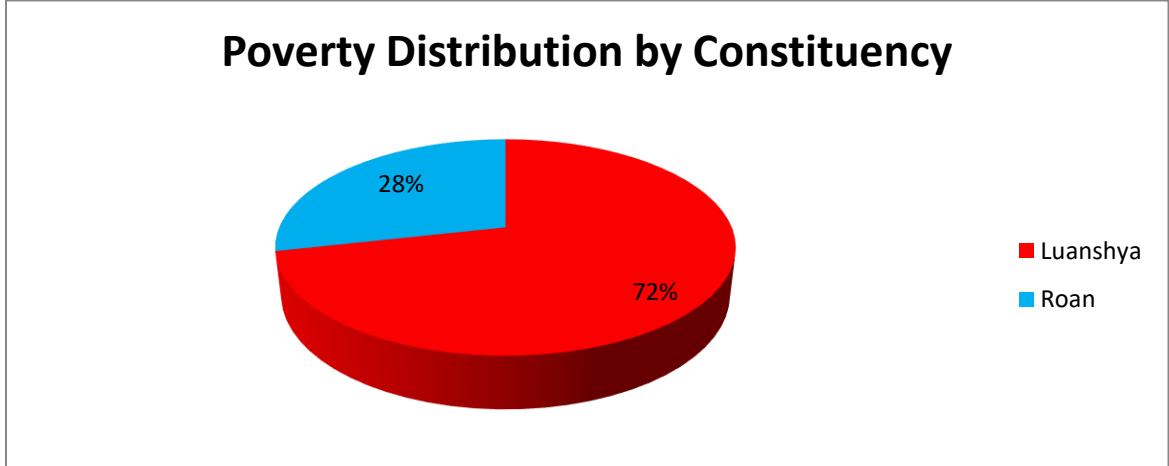

Source: Mapping Poverty at sub national level, World Bank (2015)

3.10 Poverty Levels at Constituency Level

According to the World Bank Survey (2015), statistics reveal that Luanshya Constituency has the highest number of vulnerable people of 38,570 representing a percentage of 72% in comparison with Roan which has the least number of vulnerable people of 15,374 representing a percentage of 28. This indicates that more people in Luanshya constituency need to be considered for the Social

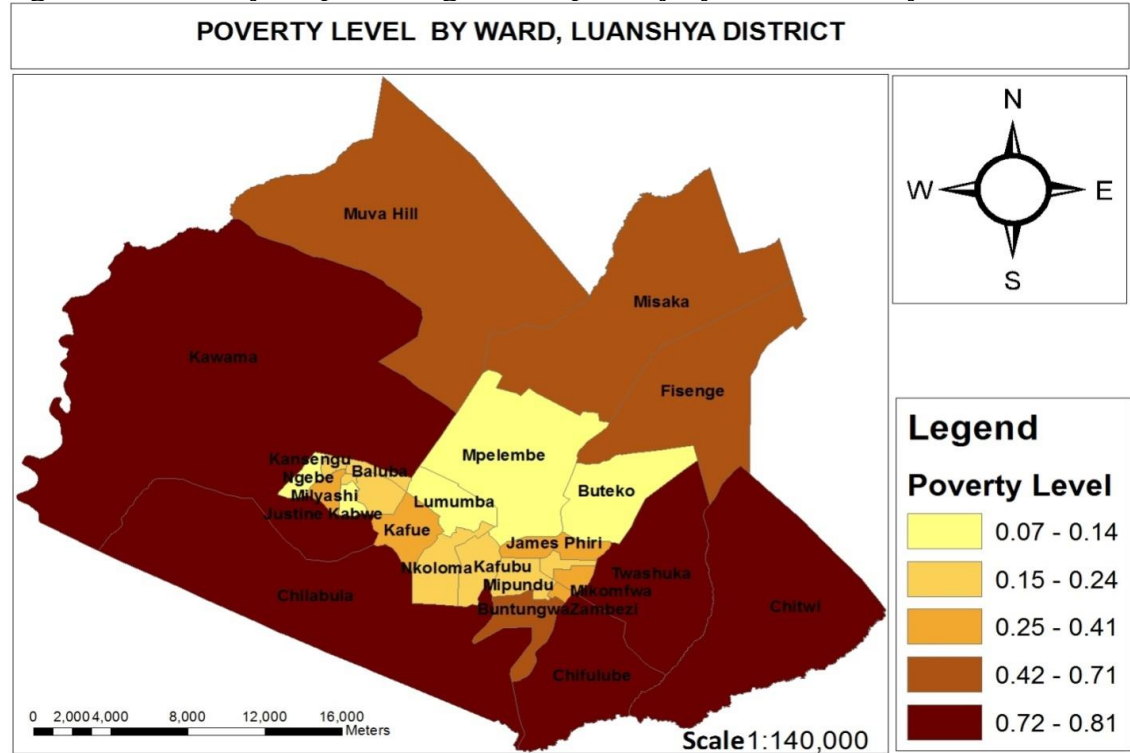

Cash Transfer. Additionally, more developmental projects need to be channeled to the constituency to enhance the living standards of the people in that ward.

Figure 21: 2015 Poverty Distributions in the Constituency of Luanshya District

Source: Mapping Poverty at sub national level, World Bank (2015)

Figure 22 : Poverty Map showing level of poverty by ward Luanshya district

Source: Mapping Poverty at sub national level, World Bank (2015)

Figure 24 indicates that the four wards namely Chilabula, Chifulube, Chitwi, Twashuka and Kawama have the highest level of poverty.

Figure 23 : Poverty Map showing the number of poor people by ward Luanshya district

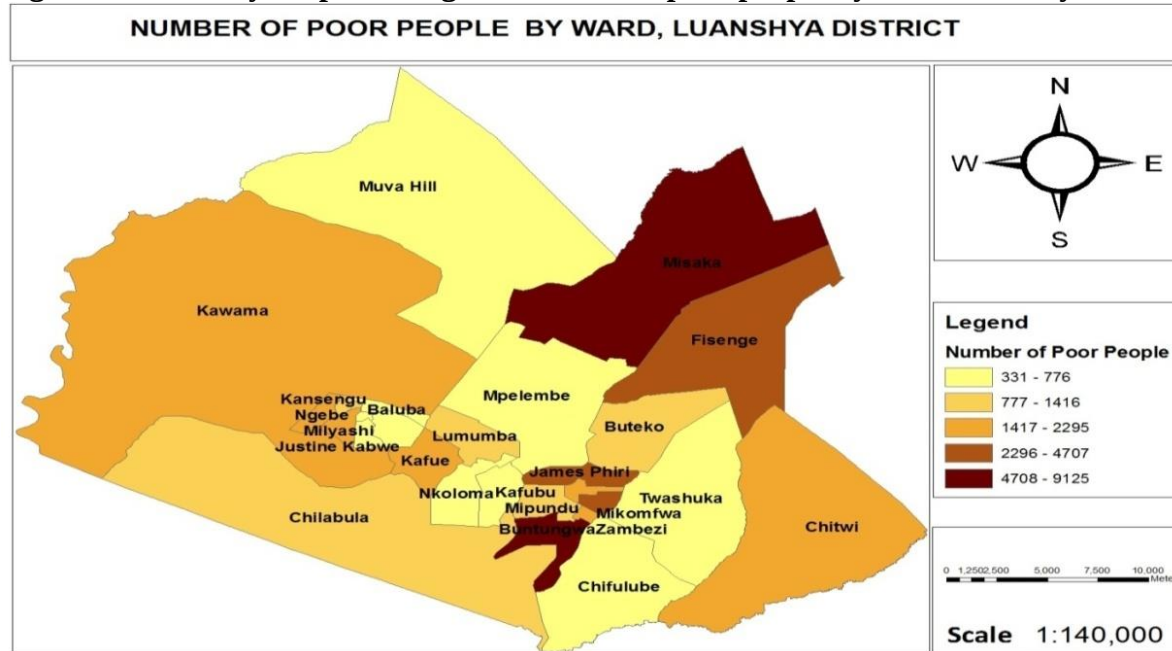

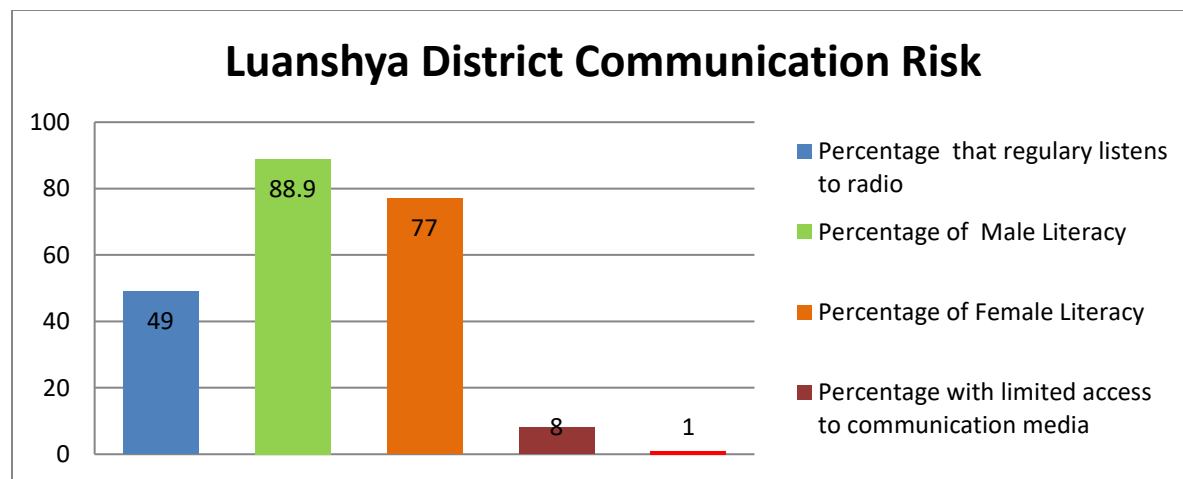

Figure 24: Luanshya district Communication Risk

Source: Zambia Individual Risk Indicators (Tabular Dashboard) (arccgis.com)

The percentage for Male Literacy is 88.9, Female literacy is 77, with limited access to communication media is 8 and the one that listens to radio is 49. The overall communication risk index for Luanshya district is 1.

Figure 25: Adult Female Literacy in Luanshya District

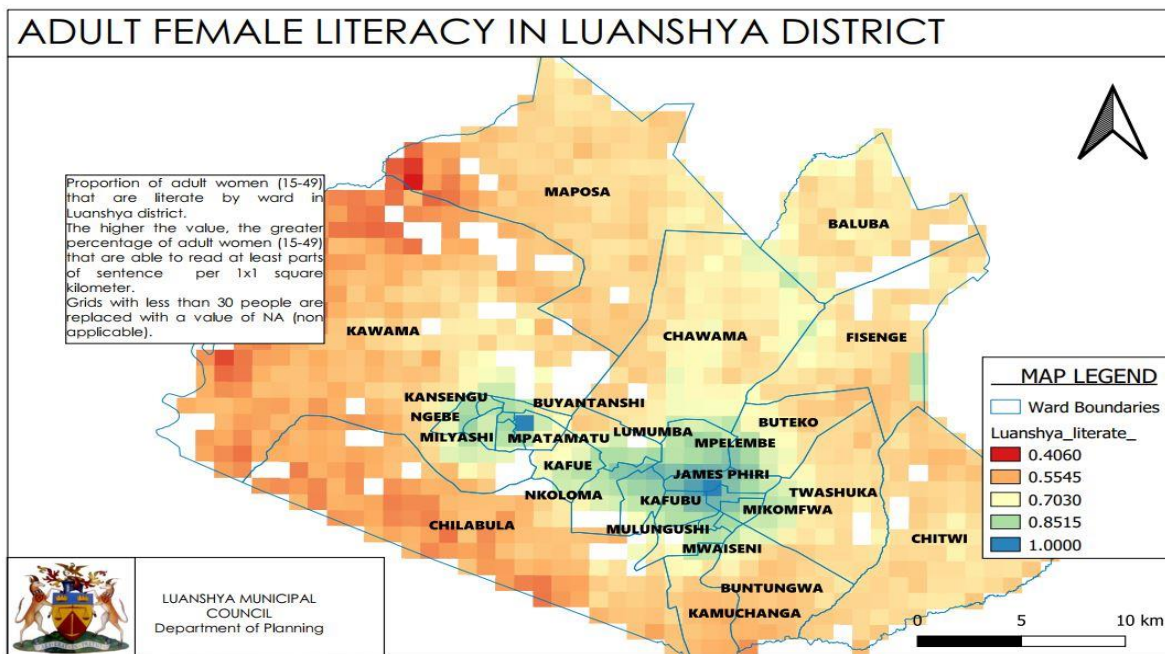

Figure 26: Adult Male Literacy in Luanshya District

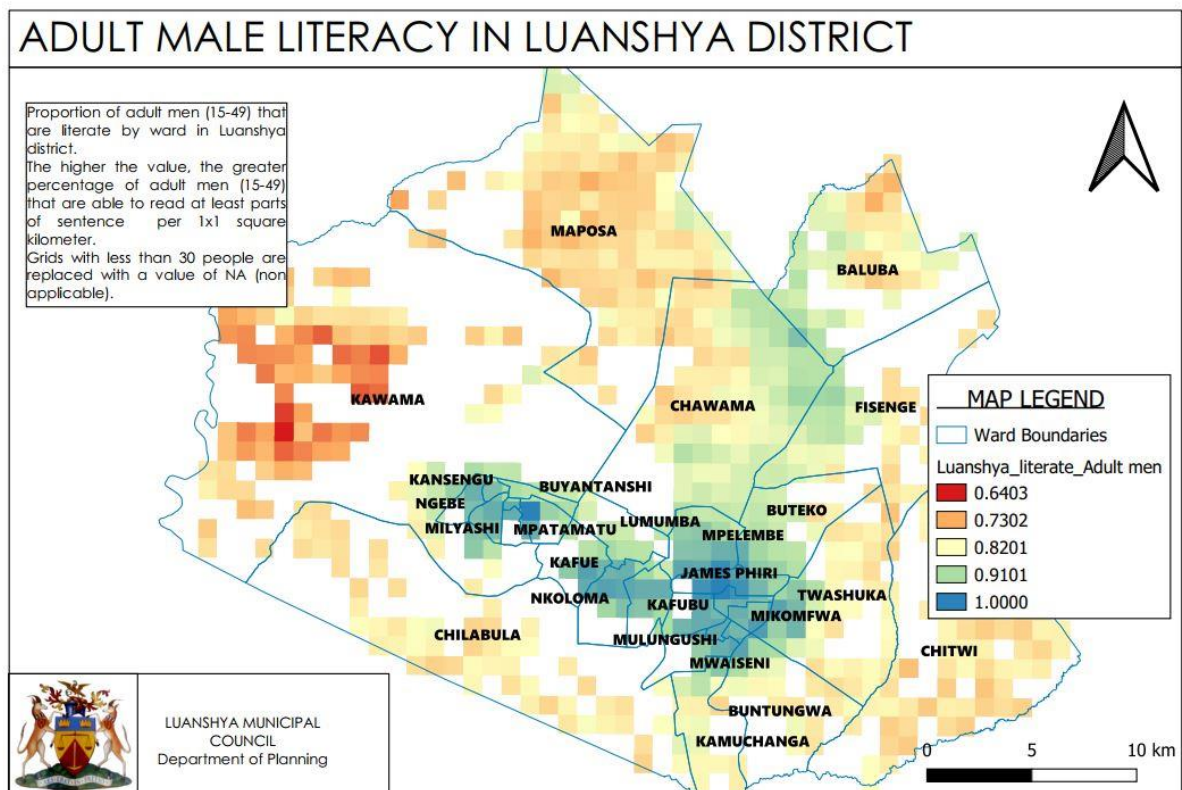

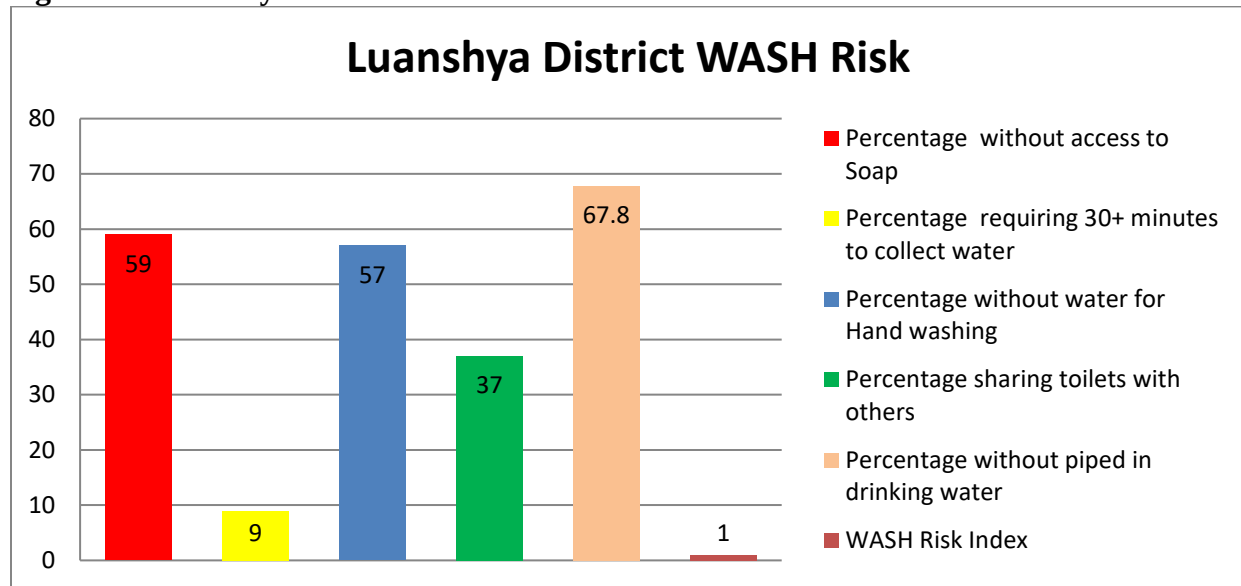

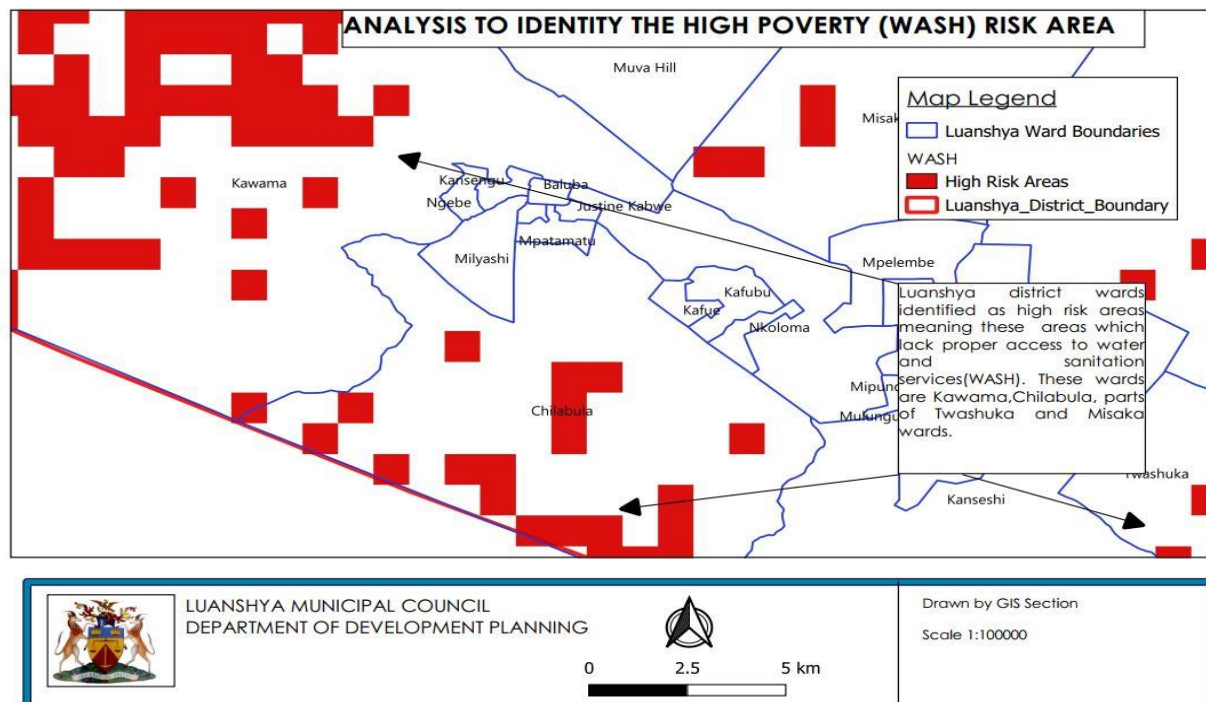

Figure 27: Luanshya District WASH Risk

Source: Zambia Individual Risk Indicators (Tabular Dashboard) (arccgis.com)

The percentage without piped in drinking water is 67.8, without water for hand washing is 57, sharing toilets with others is 37, requiring 30+ minutes to collect water is 9 and without access to soap is 59. The overall WASH Risk index for Luanshya district is 1.

Figure 28: Map of Luanshya District WASH Risk areas

4 SERVICE DELIVERY ANALYSIS

4.1 WASTE MANAGEMENT

Waste management is one of the exclusive functions of Luanshya Municipal Council as a Local Authority under Article 147(2) of the Constitution of Zambia. The council is also mandated by the Solid Waste Regulation and Management Act No. 20 of 2018 to delegate or allow franchise any component of this function to be discharged by any public or private body or company for the purposes of efficient and effective delivery of waste management services.

In accordance with the Solid Waste Regulation and Management Act No. 20 of 2018 the Council has partnered with franchise companies through its established company “The Copperbelt Waste Management Company, (COPWASTE)” to provide solid waste management services in the created waste management zones. The Municipality has been zoned into five (5) Waste Management Districts/Zones. Also, of note is that, Hazardous waste is not being dealt with under these contracts.

It is in this vain that waste is managed by five private franchise companies that were contracted by the Luanshya Municipal Council through its company to collect waste on behalf of the council from its citizens. The council manages the collection of wastes in markets and public places as well as the Central Business District.

The table below shows the waste management zones for the District where private companies.

Table 35: Waste Management Zones

Waste Management District/Zone	Area Covered
A	Mpatamatu and surrounding areas
B	Roan and surrounding areas
C	Mikomfwa and surrounding areas
D	Kamirenda and Ndeke
E	Mine area, New town and Town Centre

The Council is managing Ng’ombe dumpsite which is located at 12Km away from Luanshya Central Business District along the Luanshya- Masaiti road.

Currently the Council is using two tractor towed trailers of 7- and 3-tons capacity respectively as well as an 8 tons tipper truck. Also, periodically the Council uses a Front-end loader and Tipper

truck of 20-ton capacity to collect historical waste and garbage from places that cannot be collected using tractors.

In its continued provision of waste management services, the council faces several challenges which include:

- ❖ Lack of adequate waste management equipment's
- ❖ Bad attitudes towards waste management by some residents in the district (some people not willing to subscribe for waste management)
- ❖ Non-performance of some franchise companies
- ❖ Bad state of the dumpsite

In its quest to improve the provision of waste management in the District, the council intends to procure more waste management services equipment's (Waste Compactor), engaging the community through the WDCs to subscribe for waste collection services, enforcing the provisions of the law on waste management.

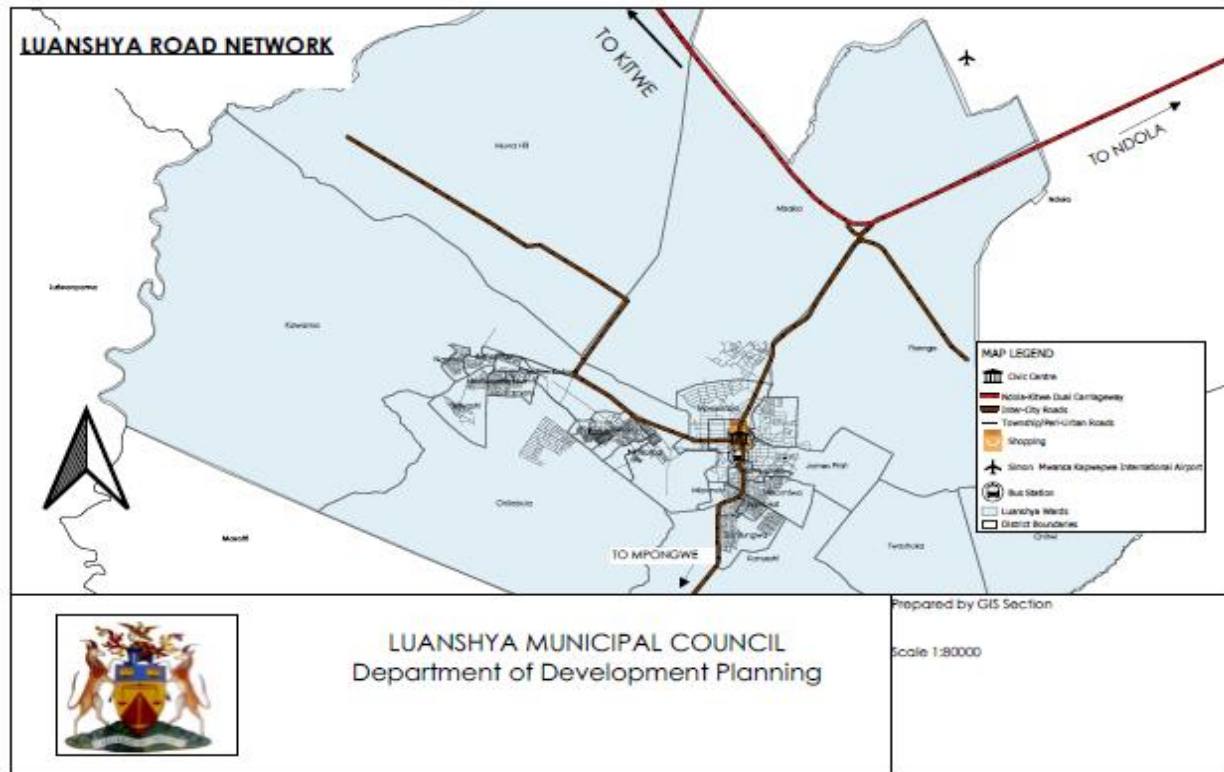

4.2 ROAD AND TRANSPORTATION NETWORKS IN LUANSHYA DISTRICT

The major transportation network in Luanshya district is by road. Luanshya District is well connected to a road network which is of bituminous standard in exception of peri urban areas which are connected to gravel road network. The district has well-connected road network connecting all the built, newly planned areas and to other towns of the country. Luanshya has one of the poorest urban road networks on the Copperbelt Province. If these roads are rehabilitated and upgraded to bituminous standard, easy access within the township can be secured and thereby stimulating business activities. This will in turn help make significant contribution to the development and realization of Zambia's economic growth potential.

Luanshya District has approximately 180 km of road network with only 9% of paved roads and 91% gravel roads. The Council provides Maintenance of these road networks through pothole patching of paved roads and grading, haulage and dumping of gravel in an unpaved road.

Most Paved roads in Luanshya need full rehabilitation i.e. ripping off, of the existing road surface (wearing course), laying, stabilization and compaction of laterite, priming and application of asphalt layer.

Figure 29: Road Network in Luanshya District

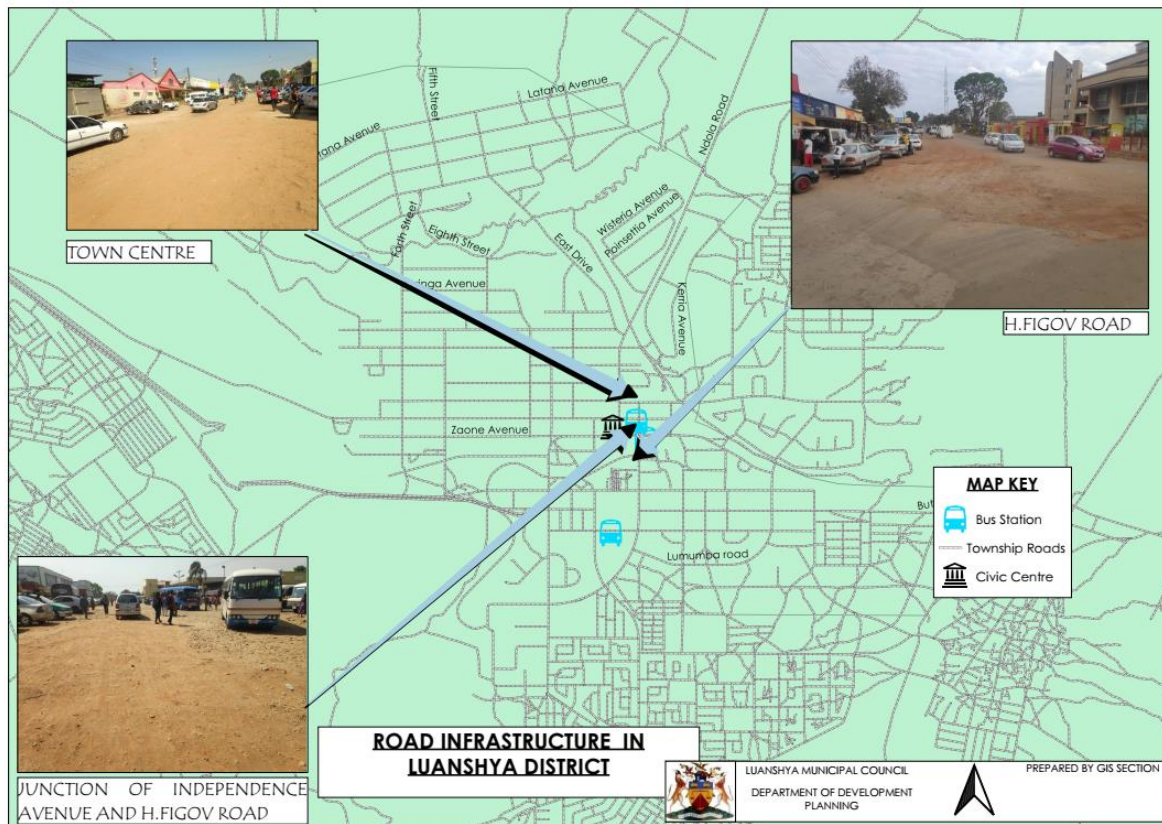

4.2.1 Feeder Roads

Luanshya District has a total number of forty (40) feeder roads and most of them are of poor condition.

4.2.2 Township Roads

The states of most township roads in Luanshya District are all in poor condition.

Figure 30: Status of Road Network in Luanshya District

The Council faces a lot of challenges in terms of service delivery of roads in the District which include-

- ❖ Limited heavy-duty machinery,
- ❖ inadequate financial support by Government,
- ❖ Inadequate funding from local generated resources and
- ❖ Frequent breakdown of machineries owned by the local Authority.

In its quest to improve the rehabilitation and maintenance of roads in the district, the council intends to procure more heavy-duty machineries and more funding towards road rehabilitation for both feeder and township roads.

OTHER COMMUNITY FACILITIES

4.3 Cemeteries

The council maintains a total number of ten cemeteries in the district. Among the ten, only one is fee paying. The following are the services offered under cemeteries:

- ❖ Provision of burial spaces,
- ❖ Issuance of burial permits and
- ❖ Burial of unclaimed bodies.

Table 36: Number of cemeteries.

S/No	Cemetery	Location	Fee Status
1.	Luanshya	Mikomfwa	Fee paying
2.	Mpatamatu	Between Roan and Mpatamatu	Free
3.	Chisata	Luanshya-Masaiti Road	Free
4.	Walale	Ndeke	Free
5.	Fisenge	Fisenge	Free
6.	Kasongo	Kasongo	Free
7.	Muva Hill	Muva Hill	Free
8.	Mpata Hill	Mpata Hill	Free
9.	Walale	Ndeke	Free
10.	Kawama	Kawama	Free

An assessment carried out at the Luanshya Cemetery both at the old and new wings revealed that the cemetery has reached its limit. It has been estimated that within the period 2023, the cemetery would be filled up and not be able to accommodate any more burials.

It is therefore prudent that new land is found for the new fee-paying cemeteries in the District.

In its spatial planning activities, the local authority plan for cemeteries to avoid situations where cemeteries get filled up without any alternatives for new sites.

4.4 Water and Sanitation

4.4.1 Urban Water Supply

Water is an integral requisite for human life. Luanshya District has several raw water sources namely; Kafubu Intake which is on Kafubu river along Masaiti road, Makoma dam, Mikomfwa dam Beer Hall, Tunnel exit and Fisenge. The raw water is treated from three (3) water treatment plants which are Makoma, Luanshya and Fisenge water treatment plants. Makoma water treatment

plant was previously used to treat water for supplying to mine townships while Luanshya treatment plant was supplying to areas that belonged to the council. The total treatment capacity for the three plants is 60,000m³/day and are currently treating 46,800m³/day due to lack of equipment at some raw water abstraction points.

A total of 19,411 households are connected to Kafubu Water and Sanitation Company water supply network. Currently KWSC weighted average water supply hours stands at Twenty (20) hours per day. The water demand stands at 55,000m³/day. However, the non-functional water sources are being equipped so that the deficit of the demand could be covered.

Table 37: Urban Water current demand and production

Service	Current Production (m³ /Day)	Current Demand (m³ /Day)	Current Deficit (m³ /Day)	Demand By 2032 (m³ /Day)
Water	46,800	55,000	8,200	72,000

Source: Kafubu Water and Sanitation Company, 2021

4.4.2 Urban Sanitation

In the urban and peri-urban areas, provision of the sanitation system is the responsibility of the Kafubu Water and Sanitation Company Ltd (KWSC). However, there is no existing sewer network in Peri Urban areas hence majority of the community survives on pit latrines. The entry point in terms of water in the Peri Urban areas was the Kiosk system. There has been an increase in household piped water connections as of 2021, which will lead to an increase in demand for waterborne sanitation systems. Currently, Kafubu sanitation coverage accounts for 71% of our total coverage. This coverage covers those connected to sewer network and those serviced by septic tanks. The sewage is treated through the conversional sewage ponds namely, Mikomfwa, Roan, Kamirenda, Golf and Mpatamatu Ponds. The total design capacity stands at 1, 066, 749 m³/day.

5 DEVELOPMENT FRAMEWORK

The Development Framework highlights the Vision, Goals and Objectives of the Luanshya Integrated Development Plan.

It further highlights the objectives and strategies to be employed in order to achieve the vision for Luanshya District. The key issues were identified during extensive consultation meetings held with stakeholders in the District. The Luanshya IDP will endeavor to address these issues by priority. Upon implementation of the foresaid core issues, it is envisaged that the poverty levels will be reduced in the District.

5.1 VISION:

“AN ECONOMICALLY DIVERSIFIED GREEN CITY BY 2033”

In this context **“Economically Diversified”** means an economy that has a number of different economic activities and provides the District with the ability for sustainable growth. Currently, Luanshya is predominately a mining town, and the vision is to diversify to other economic factors such Agriculture, Manufacturing and Tourism. **“Green City”** refers to a community of residents who reside together to balance ecological, economic and social needs for a clean, healthy and safe environment presently and in future.

5.2 OVERALL GOAL:

“A diversified and sustainable economy

5.3 Policies to Direct Development

Table 38: Shows policies that will direct development

Document	Focus area	Implication focus
Vision 2030	The Vision 2030 (Vision 2030) is Zambia's first ever written long-term plan, expressing Zambians' aspirations by the year 2030. It articulates possible long-term alternative development policy scenarios at different points which would contribute to the attainment of the desirable social economic indicators by the year 2030.(GRZ, Vision 2030, 2010)	The IDP document embraces the activities to support the attainment of the vision 2030
8 th National Development Plan (8NDP)	The 7NDP is expected to create a diversified and resilient economy for sustained growth and socio-economic transformation driven, among others, by agriculture. Furthermore, this Plan responds to the Smart Zambia transformation agenda 2064 and embeds in it the economic recovery necessary for the actualization of a Smart Zambia. (GRZ, 8th National Development Plan, 2022)	All the programmes in the IDP supports the implementation of the 4 pillars in 8NDP
Decentralization Policy	Decentralization is the transfer of part of the powers from the central government to regional or local authorities. In other words, it is as the process of political devolution, fiscal and decision-making from the central government at the local level. The main objective is to give power to the local people to make decisions on matters affecting their localities	The IDP process takes into account all matters, and institution arrangements in order to realize the goal of the decentralization policy
Urban and Region Planning Act 2015	An Act to provide for development, planning and administration principles, standards and requirements for urban and regional planning processes and systems., the act promotes integrated urban and regional development in a devolved government system, aiming for sustainable development from the national to the city level	The IDP will formulate the programs and activities in line with the provisions of the Act The act will ensure coordinated implementation of programmes and activities of the IDP as it provides a regulatory framework that guides development in the IDP area. It will also guide the process of monitoring the IDP

Table 39: Development Objectives, Priorities and Development Strategies

SECTOR	Development Objectives	Priorities	Development Strategies
Health	❖ To reduce under-five mortality rate from 3.0 in 2018 to 2.5 to 2020. ❖ To reduce malaria incidence 557/1000 in 2018 to 300 in 2020. ❖ To increase percentage of deliveries conducted in health facility from 72% in 2018 to 80% in 2020. ❖ To increase percentage of eligible HIV positive adults on ART from 97% in 2018 to 100 in 2020. ❖ To increase TB cases diagnosed and treated among all incident TB cases from 88% in 2018 to 92% in 2020. ❖ To increase percentage of children from 12-23 months who received measles vaccination from 42% in 2018 to 65% to 2020	❖ Primary health care ❖ Maternal, neonatal and child health, youth and adolescent health ❖ Communicable diseases, especially malaria, HIV and Aids, STIs and TB ❖ Non-Communicable Diseases ❖ Disease outbreaks and epidemic control, public health surveillance ❖ Environmental health and food safety ❖ Health service referral systems ❖ Health promotion and education ❖ Community health ❖ Social determinants of health	❖ Immediate and exclusive breastfeeding ❖ Skilled attendants for antenatal and postnatal care ❖ Access to nutrition and micronutrients ❖ Vector control using indoor residue spraying IRS and promotion of ownership and use of insecticide treated nets ❖ Malaria case management using effective diagnostic and lifesaving drugs ❖ Improving access to facilities so that expectant mothers do not have to travel long distances to facilities. ❖ Every facility must set up and maintain a simple standardized monitoring system for all patients on ART ❖ Ensure uninterrupted ART drug supplies. ❖ Early diagnosis Of TB including drug susceptibility, testing and systematic screening of

			contacts and high-risk groups ❖ Strengthen public health programs ❖ Expand capacity to increase access to quality health care.
(Public Health) Solid Waste	❖ To provide adequate and affordable municipal waste collection	Effective Waste collection in markets, CBD and residential areas	❖ Creating waste management zones ❖ Engagement of private franchise companies in the provision of waste management services in the created zones ❖ Legal enforcement to ensure compliance
Industrial and Commercial Sector	❖ To Create Employment Opportunities Through Industrialization. ❖ To Increase the Industrial Base in the District to improve Local Economy. ❖ To Increase Some and Cooperatives Participation in Light Manufacturing.	❖ Creation of Industrial Zones/Clusters ❖ Land Availability for SMEs And Cooperatives in Manufacturing and Processing ❖ At Least Create One Manufacturing/ Processing Industry in Main Agriculture Value Chains (Soya beans, Dairy, Ground Nuts, etc.)	❖ make land available for light industrial development ❖ relax licensing requirement and start up legal costs. ❖ promote Industrial Development through investment expositions to market the district for investment. ❖ make empowerment funds available for light manufacturing and processing. ❖ build capacity for SMEs and Cooperatives through

			Entrepreneurship Training. ❖ align skill bursaries to the needs of the industry
Forestry	❖ To ensure the integrity, productivity and the development potentials of the forest in Luanshya District. ❖ To ensure sustainable management of forest ecosystems and biodiversity application through scientific and indigenous technical knowledge ❖ To promote the growth of forest-based industries by ensuring raw material supply, facilitating capital formation and ensuring the enhancement of new investments in forest-based industries and small-scale enterprises ❖ To recognize and support the development of non-wood forest products ❖ To strengthen and develop extension skills and service delivery to effectively and efficiently reach stakeholders ❖ To ensure the contribution of the forest sector to national economy and the generation of foreign exchange for the capitalization of the forestry industry	❖ Afforestation and reafforestation ❖ Promotion of non-wood product ❖ Awareness and publicity ❖ Promoting alternative sources of energy	❖ Increase local participation in sustainable forestry management; ❖ Promote multi sector coordination of land use systems ❖ ensure the protection of headwaters, river basins and terrestrial resources ❖ rehabilitate degraded and threatened ecosystems ❖ To ensure adequate protection of forests, by empowering local communities and promoting the development and use of forest and non-wood forest products. ❖ Establish nurseries and plantations, ❖ Promote the establishment of community nurseries and woodlots, ❖ Formation of forestry income generating groups; ❖ Promote local community participation in tree planting activities for

			restoration and management of sensitive ecosystems; ❖ Enhance forestry protection and management.
Education	To increase access, equity, quality and enhance effectiveness in the provision of inclusive education	❖ Availability of learning spaces ❖ Availability of teaching and learning materials ❖ Provision of education support to vulnerable children ❖ Capacity building of staffs through continuous professional development	❖ Promotion of infrastructure development and rehabilitation ❖ Ensure the provision of SEN infrastructure facilities for children with special needs ❖ Procurement of text books & other teaching -learning materials. ❖ Enhance community school's performance by deploy/train and conduct CPD for all teachers ❖ Promote water, Sanitation and hygiene ❖ Encourage Home Grown School Feeding Programmes (HGSFP) ❖ Promote School Production Units (PUs) ❖ Promote tree planting and landscaping

Water Development	❖ To effectively and efficiently manage and coordinate the development of water resources	❖ Ensure adequate water resources availability and equitable access by all users ❖ ascertain the quantity and quality of water. provide technical guidance on matters relating to water resources development	❖ Enhance rain water harvesting and catchment protection ❖ Promote local and aquifer management ❖ Strengthen institutional capacity (technology)
Agriculture	❖ To Improve crop production and productivity ❖ To Enhance efficient use of water resource for irrigation ❖ To enhance farm power and mechanization ❖ To enhanced climate smart agriculture ❖ To enhance agro-value chain ❖ To improve information management systems ❖ To increase agriculture infrastructure ❖ To improve human resource	❖ Improved crop productivity and production. ❖ Sustainable agriculture production ❖ Efficient agricultural performance ❖ Sustainable agriculture practices ❖ Enhanced agricultural trade ❖ Information dissemination ❖ Efficient institutional performance	❖ Promote diversification of agricultural production among small and medium scale farmers; ❖ Promote the use of hybrid varieties ❖ Promote efficient use of available water resource for irrigation among small scale farmers; ❖ Promote the use of mechanical agricultural equipment ❖ Improve access to financial services to small and medium scale farmers ❖ Create tax exemptions for agriculture equipment

			❖ Enhance agroforestry practices ❖ Promote the growing of climate resilient varieties ❖ improve value addition ❖ Increasing the bulking centers ❖ Improve agri-business and market linkages ❖ Strengthen the Use of ICT in agriculture ❖ Construct Agriculture office block, housing units and markets ❖ Training and staff development Improve staffing levels
Fisheries and Livestock	❖ To enhance sustainable fisheries and livestock production and productivity,	❖ Optimal fisheries and livestock production	❖ Enhancing livestock and sustainable fisheries production, ❖ Enhancing aquaculture production, ❖ Enhancing production of fisheries and livestock products and by-products, ❖ Enhancing investment in fisheries and livestock production systems,

	❖ To Promote fisheries and livestock stocking and restocking, ❖ To enhance fisheries and livestock extension and advisory service delivery, ❖ To enhance animal health management ❖ To Enhance Fisheries and Livestock Value Chain,	❖ Extension service delivery ❖ Healthy Animal Populations	❖ Enhancing fisheries and livestock productivity and ❖ Promoting agricultural input supply management ❖ Promoting the “pass on gift “Concept; and ❖ Promoting stocking of fish in community dams. ❖ Strengthening technology dissemination, ❖ Promoting coordination among stakeholders in extension and advisory services, ❖ To strengthen farmer registration and categorisation, ❖ To strengthen farmer - research and extension linkages, and ❖ Enhancing ICT in agricultural extension and advisory services ❖ Enhancing disease prevention and control, ❖ Enhancing surveillance systems, ❖ Enhancing Bio-security Programmes, ❖ Enhancing Food Safety and Zoonotic Disease control programme,
--	--	--	--

	❖ To Improve access to finance for Production, ❖ To improve Institutional and operational capacity, ❖ To improve Infrastructure and equipment, ❖ To enhance the Fisheries and Livestock Information Management System	❖ Increase fisheries and livestock trade ❖ High Quality Services	❖ Enhancing Application of Indigenous Knowledge and Practices (IKP), ❖ Providing Agri-business development services, ❖ Promoting Value Chain linkages; and ❖ Promoting fisheries and livestock product diversification, ❖ Enhance financial support to small scale farmers. ❖ Improving financial accountability, ❖ Strengthening performance management system, ❖ Strengthening staff training and development, ❖ Improve staffing level ❖ Develop office blocks and housing units for extension officers, ❖ Provision of adequate transport for extension officers, and ❖ Develop Fish and livestock market Markets. ❖ Establish fisheries and livestock information management systems, and
--	--	---	--

			❖ Establish fisheries and livestock early warning systems.
Community Development and Social Welfare Department	❖ To provide the basic social protection services, care and support to Orphans and Vulnerable children in the district ❖ To provide juvenile justice, to juvenile who come in conflict with the law and rehabilitation. ❖ To provide alternative services to children in need of care.	❖ Children wellbeing ❖ Justice for juveniles	❖ Ensure access for basic social services by OVC, ❖ Strengthen coordination of social protection systems; ❖ Improve coverage and targeting of social protection programmes. ❖ Increase on the number of beneficiaries benefiting from food security pack to ensure household food security. ❖ Enhance institution collaboration. ❖ Promote multi-sectoral approach towards supporting the survival, protection and development of OVC.

Table 40: Climate change risk reduction and mitigation strategies for Luanshya district

S/N	RISK FACTORS	PROBLEMS	REDUCTION STRATEGIES	MITIGATION STRATEGIES	PARTNERS
1	• Unsustainable Agriculture Methods • Charcoal Burning • Infrastructure development • Late fires • Encroachment of protected areas	• Deforestation • Land Degradation • Reduced Rainfall Activities • Extreme Temperatures • Droughts • Reduced Agriculture Production • Reduction in Aquatic Production • Increased Disease Incidences • Increased Vulnerability • Extinction of Both Flora and Fauna Species • Low Economic production	• Formulate by-laws governing production and use of natural resources • Promote and invest in alternative sources of energy • Intensify awareness programs on sustainable natural resources management on • Design monitoring mechanisms. • encourage assisted natural generation • invest in afforestation and re-afforestation programs	• introduction of livelihood diversification programs (introduce drought resistant crops) • encourage and invest in beekeeping • invest in the production of briquettes and wood chips as opposed to charcoal • Engage the local authority for by law formulation -encourage alternative sources of income such as bee keeping, poultry rearing, village banking, mushroom growing, fish farming, gardening and goat rearing. -encourage the participation of the private sector in the marketing of gas stoves and improved stoves. -encourage community plantations. -support self-help initiatives	• Community Development • Local authority • National parks and wild life • Forestry • Traditional leaders • Agriculture • Fisheries and livestock • NGOs

Table 41: Consideration of Potential Resources

Issue	Description of Potential	Total Capacity	Current Utilization	Spare Capacity	Potential Factors	Limiting
Poor and bad state of the Road Network in the urban and peri urban areas	- Availability of earth moving equipment - Availability of Skilled and unskilled labor - CDF and Equalization Fund NRFA (Financial Potential)	Skilled and unskilled labor, unemployed youths	Potential for 100% funding	Potential for 100% funding	Limited number of earths moving equipment	Inadequate financial support
Long distance to access Secondary school education	- Presence of community and Primary schools (Infrastructure potential) - Local community unskilled labor (Human Potential) - Community upfront materials (Natural Potential) - Ministry of Education and CDF (Financial Potential)	Available Primary Schools can be upgraded into Secondary Schools	Only few Primary Schools have been upgraded into Secondary Schools	Upgrade all earmarked Primary Schools into Secondary Schools	Inadequacy funding for infrastructure development	
Poor water supply and sanitation	- CDF, equalization fund and partners (Financial Potential) - Kafubu Water and Sanitation Company Skilled human labor (human potential) - WASH programs - Kafulafuta Water Project - Availability land for onsite sanitation and construction of biological or conventional sewage treatment plant	All households in Urban areas can be provide With adequate sanitation, clean and safe water.			Limited financial resources	

Limited access to health facilities	- Local community unskilled labour (Human Potential) - Community upfront materials (Natural Potential) - Ministry of Health, partners and CDF (Financial Potential)	health facilities	37 health facilities	4 health facilities	Inadequate funding
Inadequate Telecommunication Facility	- Land to construct telecommunication and postal services				Poor access roads Funding to complete project
Low productivity in Agricultural sector (Crops, Fish and Livestock)	- Land available for agriculture (Natural potential) - Availability of dams and streams to provide water source	Ha	Ha	Ha	- Drought - Agricultural Input supply agents unable to meet demand
Limited value addition to agricultural and mining products	- Copper ore deposits - Dairy farming				
Unsustainable forestry management and Climate Change	- Alternative source of livelihood such as livestock rearing and farming - 51,000 hectares of arable land - Availability of dams and streams	Ha	Ha	Nil	- Inadequate access to seed finance to engage in alternative sources of living

6 Spatial Development Framework

A Spatial Development Framework (SDF) seeks to guide, overall spatial distribution of current and desirable land uses within a Municipality in order to give effect to the vision, goals and objectives of the Luanshya District Integrated Development Plan. The aims of a Spatial Development Framework are to promote sustainable functional and integrated human settlements, maximize resource efficiency, and enhance District identity and unique character of a place.

A Spatial Development Framework is a core component of a Municipality's economic, sectoral, spatial, social, institutional, environmental vision. In other words, it is a tool to achieve the desired spatial form of the Municipality. A spatial development framework provides the basic guidelines for a land use management system for the Municipality". To ensure sustainable growth and development in the District, it is vital that all strategic planning processes are aligned and fully integrated.

Table 42: Showing spatial concepts

Nodes	These are areas where a higher intensity of land uses, and activities will be supported and promoted. Nodal development will improve efficiency as it provides easy access and creates thresholds for a variety of uses and public transport services. As part of a district spatial strategy, nodes will relate to settlements where there is or is proposed to be an intensity of commercial and government services such as sub-district centers. In urban areas, nodes relate to areas where there is or is proposed to be a concentration of commercial and government uses.
Smart Compact growth city	Compact City Growth Theory strategy controls the spread of urban suburbs into open lands, is acceptable to residents, reduces trip lengths and encourages use of public transit, improves efficiency in providing urban infrastructure and services, and results in environmental improvements supporting higher quality of life in cities.
Growth Poles	Growth Poles Theory The central idea of the growth poles theory is that economic development, or growth, is not uniform over an entire region, but instead takes place around a specific pole (or cluster). In our IDP area these poles have been identified.
Corridors	Corridors are areas along major transportation routes where an increased intensity of development will naturally be attracted and may be encouraged.
Protection	A spatial strategy aimed at protecting valuable natural, economic or heritage resources, such as agricultural land, wetlands, ecological corridors or scenic landscapes. Protection may be required for parts of settlements (e.g. the establishment of a network of green spaces in urban areas) or parts of the IDP area (e.g. rural landscapes outside of settlements). A spatial strategy based

	upon the principles of protection must be backed up by development control policies and strategies.
Growth Areas	The identification of appropriate / future growth opportunities is an important aspect of a spatial strategy. By proactively indicating such areas, based on the agreed principles, the often-negative impacts of unguided market forces can be curtailed. These can include the redevelopment of existing development areas to higher intensities, vacant land suitable for infill development as well as Greenfield sites.

Table 43: Reconciliation of Spatial Development Framework and Agreed Objectives and Maps for development scenarios

Key Considerations for Spatial Analysis	Key Considerations for A Spatial Development Strategy	Issues to Be Considered in Aligning Spatial Strategy with IDP Objectives, Strategies and Projects
Reduced distance to access secondary school in peri-urban areas		
Mapping out current schools in the district	Identify areas in need of schools	Considering factors that can improve the quality of service i.e. Infrastructure, staffing
To Improve telecommunication services		
Mapping current communication towers and their mobile coverage	Identifying areas without mobile coverage	Areas that are highly populated but without mobile coverage
Deliver health services to the door step		
Mapping out current health facilities in the district	Identify areas in need of Health facilities	Considering factors that can improve the quality of service i.e. Infrastructure, staffing
Improved solid management in the district		
Mapping the current dump site	Identifying areas with a lot of garbage	Considering factors that can improve solid waste management
Improved road network system		
Mapping out all road network	Identifying roads that need to be worked on	Construction and rehabilitation of roads
Ensure availability and sustainable management of water and sanitation for all		
Identify the location of existing physical infrastructure	Identify areas that do not have access to clean and safe water.	Maintenance of existing water supply and sewer pipes installed. Establish development control strategies
Enhanced Sustainable Forestry Management and climate resilience		
Mapping out the status of Forest areas.	Identifying forest that are depleted and encroached on	Identify alternative livelihoods

Consider the impact of the existing development patterns on the identified protected and reserved area	Identify where particular land use type will be allowed or not allowed	Define land use management strategies which limit development in reserved and protected areas
Infill and Densification		
Identify low density and underdeveloped areas	Identify where infill or densification should be pursued Identify where particular land use types will be encouraged or discouraged support the strategy of densification	Develop land use management strategies and development control policies to promote increased densities
Population and Settlement		
Identify settlement hierarchy and function of the settlements within hierarchy	Identify the future functions of settlements within settlement hierarchy Indicate settlements where economic growth and social investment will be targeted Identify settlements where local area plans will be required Identify where particular land use will be encouraged or discouraged Identify areas to be targeted for upgrading	Establish development control strategies to support the implementation of the spatial strategy

6.1.1 Development Scenarios

6.1.1.1 Scenario 1: Connectivity and Improved agricultural productivity

This development scenario connectivity is the means in which the District is to achieve enhanced agricultural productivity. Road transport plays an important role in agricultural development. This is because it is the major means of transporting agricultural produce from the farms to the markets as well as to various urban communities.

Construction and rehabilitation of road network will increase productivity and economic activities which will in turn increase the population of the District. Road's construction and rehabilitation is key in achieving effective connectivity. Potential corridors have been identified along three major roads. These corridors along the proposed airport road, along Kitwe Ndola dual carriage way and along Mpongwe road; have been identified as potential agriculture related value addition. Better roads lower the transactions costs of farmers as inputs become more accessible and farm produce are more easily marketed.

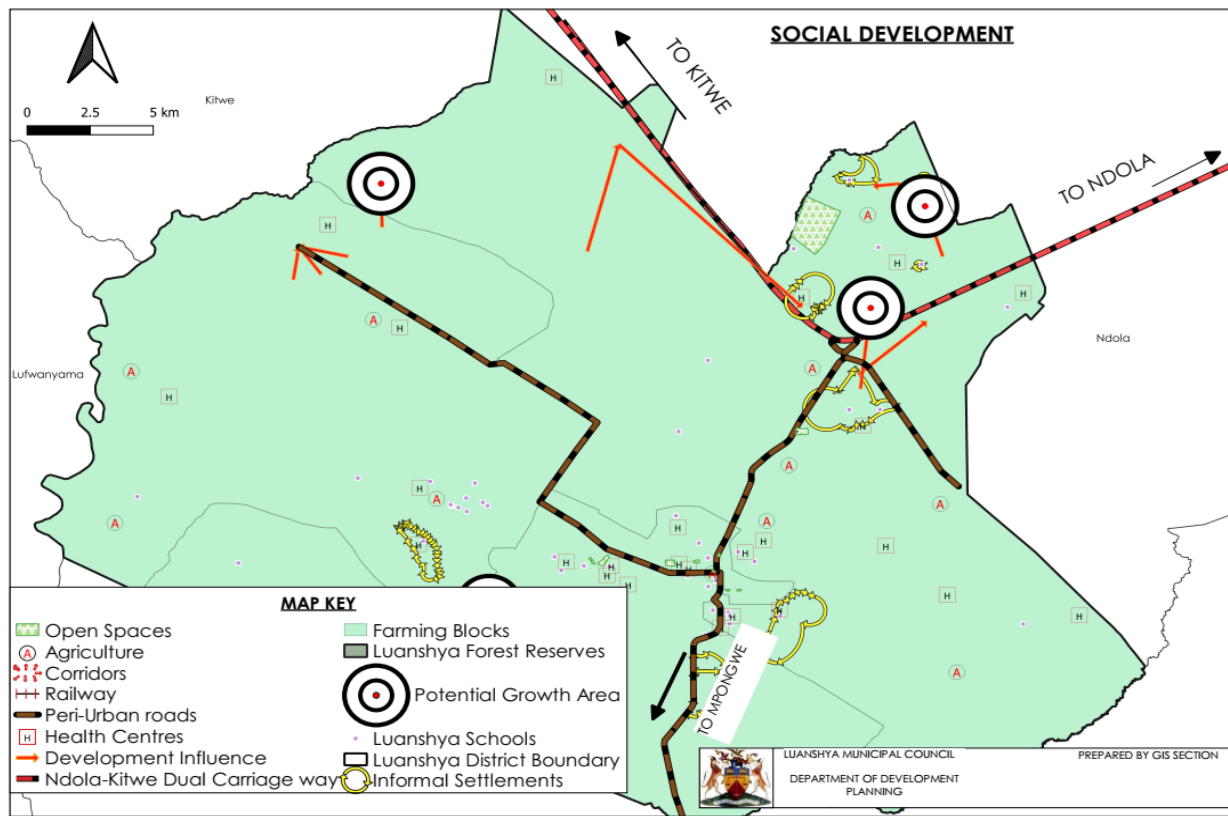

Figure 31: Scenario of Connectivity and Productivity

6.1.1.2 Scenario 2: Social Development

Luanshya Integrated Development Plan has outlined programmes for each sector designed to address the issues identified during the community consultative meetings as well as from the available sector data. The development scenario aims to increase access to basic services such as education, health and environmental services. Growth poles and nodes are used as concepts for strengthening service delivery through equitable distribution of education and health in all wards to ensure that distances to access these facilities is significantly reduced. The projected increase in demand for services such as schools, clinics water and sanitation are also envisaged to be effectively addressed with this development strategy as the IDP has already identified areas where Local Area and Sector Plans will be developed in the course of the implementation of Luanshya Integrated Development Plan.

Growth Poles will be used as areas of concentration where education facilities, water, security, communication and road infrastructure will be developed. The identification of growth poles is based on the already existing demand from surrounding settlements as well as proximity to neighboring communities. This will be a more realistic and economic approach to address the issues that were identified during the consultative meetings.

Figure 32: Social Development Scenario

6.1.1.3 Scenario 3 Smart Compact City

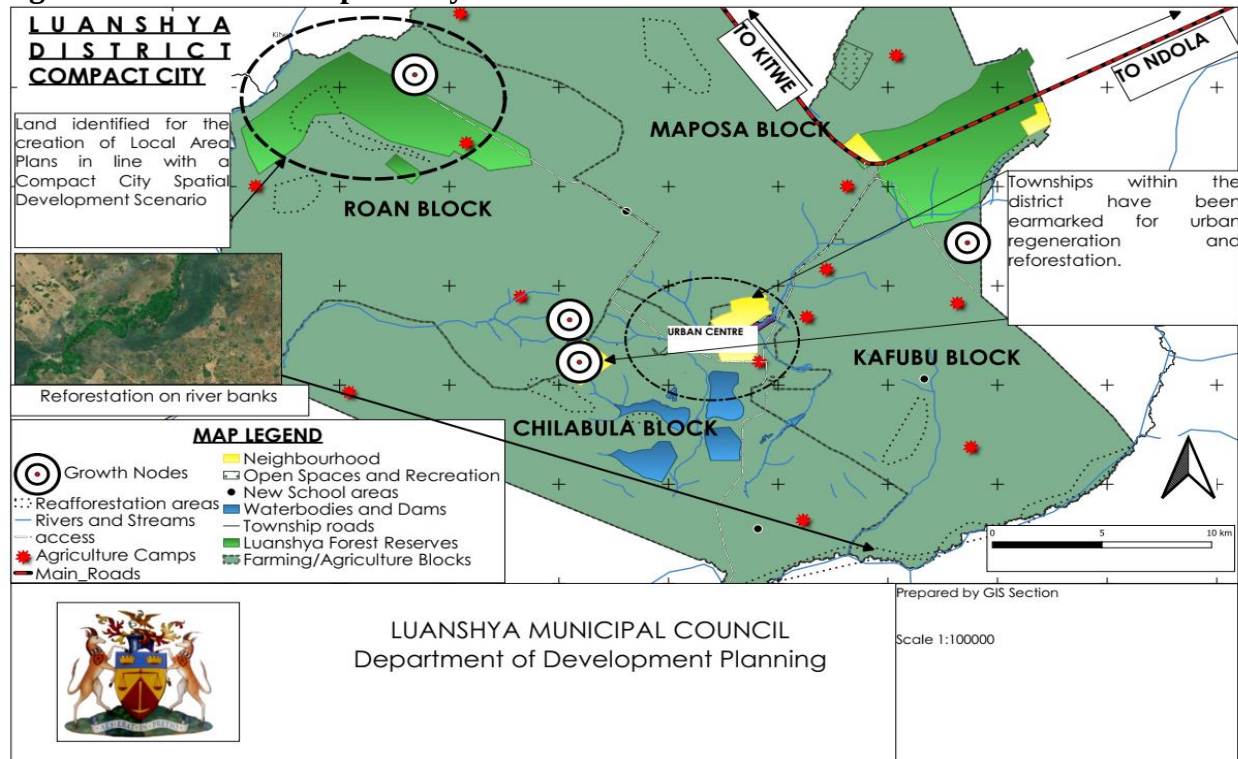

Luanshya Integrated Development Plan has a Vision “Economically Diversified Green City by 2033”. The compact city development scenario encourages a consolidated urban development and protects high potential agricultural land and sensitive environments. It involves the promotion of urban regeneration. Compact City Growth Theory strategy controls the spread of urban suburbs into open lands, is acceptable to residents, reduces trip lengths and encourages use of public transit, improves efficiency in providing urban infrastructure and services, and results in environmental improvements supporting higher quality of life in cities.

Compact City policies can help in achieving urban sustainability in many mutually reinforcing ways-

- ❖ Shorter intra urban distances and less automobile dependency can reduce energy consumption and carbon dioxide emissions.
- ❖ Compact cities conserve farmland and natural biodiversity around urban areas.

- ❖ Compact cities create more opportunities for urban rural linkages. Nearby farming encourages local food consumption and reduces food consumption, which also reduces carbon dioxide emissions.

Figure 33: A Smart Compact City

6.1.1.4 Selected Scenario for the Spatial Development Framework

The Compact city scenario would help in promoting a diversified green city with emphasis on preservation of farmland and enhance diversity and quality of life in urban centers and peripherals.

7 PLANNING NEEDS

The section contains the assessed and estimated planning needs in Luanshya District using the population projections and current planning standards in units and hectarage. The needs include the existing and estimated ones. The base year used is 2010, which constitutes the year for determining the existing needs. The table below shows the housing needs based on population projection: -

Table 44: Housing Needs Based on Population Projection

Reference	Period				
	2010	2015	2020	2025	2035
Population	156 059	172 170	177, 934	183,452	188,417
Number of Households	26 010	28 695	29 656	30 575	31 403
Number of existing houses	22 171	22 285	22 345	22 398	22 416
Number of estimated housing needs	3 839	6 410	7 311	8 177	8 987

The table below shows the population growth with the estimated number of households, existing housing hectarage and estimated hectarage required

Table 45: Housing Needs in Hectarage

	2010	2015	2020	2025	2035
Population	156059	172170	177,934	183,452	188,417
Number of Households	26010	28695	29656	30575	31403
Number of existing houses	22171	22285	22345	22398	22416
Number of estimated housing shortfall	3839	6410	7311	8177	8987
Estimated housing hectarage	911.43	916.2	918.65	920.84	921.58
Estimated housing hectarage shortfall	157.83	203.52	300.56	336.17	369.47

The hectarage in the above table assumes that new residential zoning/development of Luanshya town is distributed at 50% low-cost housing, 30% medium -cost housing and 20% high-cost housing and on the developments/planning standards shown on the table below: -

Table 46: Number of Units per Hectare in Residential Zones

Residential zoning	Plot sizes	Dwelling unit/Ha	Possible appropriate locations
Low cost	200m ² - 285m ²	35-50	Town center or immediately adjacent to public transport hubs
Medium cost	286m ² - 666m ²	15-35	Neighborhood centers (typically within 400m walking distance of center point). Inner urban suburbs
High cost	667m ² - 2000m ²	5-15	Urban peripheral, outlying land, areas with capacity / environmental constraints

7.1 Commercial Building Needs in Luanshya Based on Population Projections

The table below shows the number of shops needed in Luanshya from 2010 to 2035. The estimates of the number of shops in Luanshya are based on the current planning standards of one shop per 30 families (household).

Table 47: Shows number of shops in the district

	2010	2015	2020	2025	2035
Population	156059	172170	177,934	183,452	188,417
Number of households	26010	28695	29656	30575	31403
Number of shops needed for above population	867	957	989	1019	1047
Number of existing shops	1141	1 151	1209	1217	1232
Number of estimated shop needs	-	-	-	-	-

Note: the number of existing shops in the CBD is more than the shop needs for the population according to the planning standard, therefore there is no shortfall.

7.1 Central Business Hectarage Needs

The land use planning standards for the central business area are as shown below: -

Table 48: Shows planning standards for central business area

LAND USE	STANDARDS AND CATCHMENTS	COMMENTS
Shopping (BS)	Rural area settlement total =160 -360m ² /1000 (260m ² average) dispersed as: a) Central area 80-180m ² / 1 000 pop (i.e. onesize shop) b) Dispersed 80 -180m ² / 1, 000 pop	Standard relates to retail space not plot size
Parking(shops)	3/1000m ² floor space	
Retail Market (BM)	14 stalls/1000 pop i.e. 25m ² /1000	1 Km catchment
Parking (Markets)	1/300m ² floor space	
Offices (BC)	400 ² / 10 000 pop	
Parking (Offices)	1/100m ² floor space	
Licensed Premises	2000m ² / 3 000 pop (plots to be 1,000 -2, 000m ²)	
Petrol Filling Station (TS)	1, 000-1, 500m ² site/ 20 000 pop	
Post Office (AP)	Sub office 300m ² /10 000 pop	
PARKING (Licensed Premises)	1/40m ² public floor space ¾ bedrooms 1/5 staff	
Small workshops	10 x 25m ² / 4000 pop	Adjacent market area
Industry/warehousing & wholesale premises	1 car/10 employees 1 lorry/1 000m ² (min 3)	Lorry spaces = 46m ² Additional provision for offices where appropriate

With the above planning standards and unit needs projected in the table. The table below represents the commercial hectarage needed for the CBD.

Table 49: Shows commercial hectarage need in the CBD

	2010	2015	2020	2025	2035
Population	156 059	172170	177,934	183,452	188,417
Number of Households	26010	28695	29656	30575	31403
Number of shops needed	867	957	989	1019	1047
Number of Existing shops	1141	1 151	1209	1217	1232
Number of Estimated Shop shortfall	867	957	989	1019	1047
Estimated shopping Hectarage shortfall	-	-	-	-	-

Note: the number of existing shops in the CBD is more than the shop needs for the population according to the planning standard, therefore there is no shortfall.

7.2 Educational Hectarage Needs

Educational hectarage requirements are drawn from the planning standards shown below-

Table 50: Shows educational needed

LAND USE	Standards and catchments	Ha/population
Nursery School (GEN)	0.5 ha with GEP 200 pupils/ 4, 000 population average 25 pupils/school	0.125/1000
Primary School (GEP)	1 stream 280 pupils (1500) 1.2 HA 2 stream 5600 pupils (3000) 1.2 HA 3 stream 840 pupils (5 400) 1.2 HA 4 stream 1 120 pupils (6000) 1.2 HA	At 4 stream idea targets 0.5/1 000
Secondary school (GEP)	4/2 streams (4 x Grades 1, 2, 3, 2 x Grades 4,5) for 20 000 pop buildings required when 3-4% of pop =620 - 820 pupils with 520 min	5/20 000
Parking Schools	1/classroom (plus “set down” area	

From the projected population of 2030 (188 417) and planning standards, 166.8 hectors of land will be required for this sector.

7.3 Health Building Needs

The health building unit needs in Luanshya as stated by the stakeholder for the planned period is as follows;

- ❖ Construction of Clinics;
- ❖ Construction of health posts;
- ❖ Rehabilitation of existing hospitals, clinics and health posts.

7.4 Health Buildings Hectarage Needs

Land area for the general hospital and clinic is derived from the planning standards below.

Table 51: Shows health hectarage needed

Land Use	Standard and Catchments	Ha/Population	Comments
Health Sub-Centre or Clinic (GHC)	600-800m ² /1,000pop	0.06-0.08/1,000	Housing outside site: 15km radius catchment
Hospital (GHO)	Mk. I (District) 1/50,000 pop; Mk. II (prov. H.Q)1/100,000 POP; Mk. III 1/20,000 POP; General 1/300,000 pop		
Parking (Health)	1space/5beds+space/1staff		

From the projected population and planning standards, 40 hectors of land will be required for this sector by the year 2030.

7.5 Industrial Planning Standards

Table 52: Shows industrial planning standards

Land Use	Standard and Catchment
Service Industry Small workshops Large workshops (FL) Other Industry (General or special) Specific works as required Parking (Industry)	10X25M ² /4,000Pop 5X400M ² /1,000Pop +50% expansion nearby +50% land reservation for “spin-off” 1 car/10 employees 1 lorry/1,000m ² (min 3)

7.6 Local Street Unit Needs

The table below shows the existing roads in the district which need rehabilitation and maintenance as most of the roads are in poor condition:

Table 53: Local street unit needs

S/N	Type of Road	Length (Km)
1	Gravel	395.8
2	Tarred	64

7.7 Social Facilities Planning Standards

The planning standards for public and social facilities are shown below: -

Table 54: Showing facilities planning standards

LAND USE	STANDARD AND CATCHMENTS	HA/POPULATION
Community Hall (PS)	1,500-2500M ² /10,000POP;(3,000M ² if sports facilities)	0.06_0.081/1,00
Place of worship (PW)		
Public convenience (PT)	1000-1,500m ² /3,000pop	
Entertainment (Theatre, Social Clubs)	0,04ha/1,000pop	
(PE)	0.5ha/300,000pop	
Open air cinema (PE)		

7.8 Open Spaces and Recreational Facilities Planning Standards

This comprises parks, open spaces, green areas, cemetery, recreation and tourism. The table below shows the Planning standards for Open facilities: -

Table 55: Open spaces and recreational facilities

LAND USE	STANDARDS CATCHMENTS	HA/POPULATION	COMMENTS
“Tot Lots”	0.1 ha/ 1, 000 pop	0.1 ha/1, 000	Ideally to serve 25 houses
Children’s Playing ground (OPP)	Serving 100m radius		
Play Parks (OP)	Sites totaling 0.5 ha/ 10 000 pop	0.5ha/ 1 000	Including informal football pitch areas
Swimming Pools (OPG)	To serve 200m radius 2.0ha/ 10 000 pop, 1 km radius	2.0ha/ 10 000	1 football pitch/ 5000 pop
Golf Course (OPG)	0.1ha/ 1000 pop	1ha/ 1000	Less specific requests
Private Park or Play Area (OVP)	0.75ha site/30-50 000 pop		This acts as land reserve within town
Race Track/Stadium/Show Ground (OPR)	60ha site (18 hole) 30ha Site (9hole)		Demand likely once community exceeds 10 000pop
	0.05 ha/1 000 pop 5 ha site		Site away from residential areas
	50ha/50 000pop		

Cemetery Crematorium (CE)	0.25ha/1 000pop		
“Gardens” (AU)			

From the projected population of 2030 (188 417) and planning standards, 47.1 hectars of land will be required for the cemetery.

8 IMPLEMENTATION PROGRAMME

8.1 Capital Investment Plan

Capital investment plan for the district

Table 56: Fisheries and Livestock

Activity	Input	Quantity	Unit cost-ZMK	Total cost-ZMK	Source of funds	Source information of
Construction of camp houses	❖ Construction Materials ❖ Labour ❖ Transport	5	500,000	2,500,000	GRZ	Ministry of Fisheries and Livestock

9 IMPLEMENTATION PLAN – LUANSHYA DISTRICT

9.1 Financial Performance for Luanshya

Table 61: Financial performance for the district for the past four years

FINANCIAL PERFORMANCE OF LUANSHYA MUNICIPAL COUNCIL 2019 - 2022				
SOURCES OF REVENUE	2019	2020	2021	2022
OWNERS RATES	18, 422, 161.78	28, 770,517. 85	26, 409, 814.76	33, 316, 085.56
LOCAL TAXES	95, 473. 00	125, 727. 98	93, 712. 30	81, 349.50
FEES AND CHARGES	2, 910, 781. 11	3, 865, 045. 28	3, 555,538. 48	4, 919, 403. 03
LICENSES	182, 828. 09	101, 866. 80	108, 856. 00	163, 686. 84
LEVIES	1, 061, 416. 41	802, 861. 05	928, 448. 20	1, 564, 912. 13
PERMITS	1, 350, 601. 70	1, 243, 610. 03	1, 756, 413. 42	1, 305, 868.34
DEVELOPMENT CHARGES	1, 556, 186. 14	4, 037, 239. 04	1, 140, 661. 12	48, 001, 264. 23
OTHER INCOME	629, 659. 45	202, 167. 58	851, 090. 51	112, 654
NATIONAL SUPPORT	14, 481, 200. 98	17, 302, 572. 71	16, 315, 970. 67	11, 969, 639. 03
GRAND TOTAL	40, 690, 308. 66	56, 451, 608.32	51, 160, 505. 36	101, 434, 862.7

9.2 Analysis of The Finance Plan

9.2.1 Owners Rates

The owner's rates have been going up steadily in 2019. It was at K18, 422,161.78 and in 2020 it went up to K28, 770,517.85 while in 2021 it dropped to K26, 409,814.76. Furthermore, in 2022, the owner's rates increased to K33, 316, 085.56. In other years to come it is anticipated to rise due to the new valuation roll for 2020 and supplementary roll that will be done to cater for properties to be developed in the middle of the implementation plan period.

9.2.2 Local Taxes

These are fees which are collected twice in a year from all those who are in employment. Using the database, it is currently estimated that local taxes will be around K97, 755.00. A rise is anticipated in the subsequent years as the District diversifies to other activities other than mining. The diversification is likely to create more employment which will increase Personal Levy payments.

9.2.3 Fees and Charges, Licenses, Levies and Permits

As the District diversifies to other economic activities, it is anticipated that many businesses and other activities will be introduced that will turn increase revenue.

9.2.4 Development Charges

It is anticipated that there will be a rise in Developmental charges in the coming years looking at the number of parcels of land that the council intends to open for allocation to the public. Although land premium is one off payment, parcels of land already allocated will increase revenue collected through rates and other revenue sources.

9.2.5 National Support

It is anticipated that there will be an increase in national support from Central Government due to developmental activities the Government is embarking on. For instance, there has been an increment in the Constituency Development Fund and other grants such as, Road maintenance in the District through Road Development Agency (RDA) and the National Road Fund Agency (NRFA).

9.3 Financial Plan for Luanshya District 2022-2026

Table 62: Shows financial planning for the district

Sources of Revenue	2022	2023	2024	2025	2026
Owners Rates	37,210,301.00	37,210,301.00	37,210,301.00	43,300,000.00	43,300,000.00
Local Taxes	110,355.00	97,755.00	97,755.00	105,000.00	105,000.00
Fees And Charges	6,317,737.00	7,638,300.00	7,873,250.00	8,660,575.00	9,526,633.00
Licenses	368,350.00	740,729.00	775,480.00	814,254.00	854,967.00
Levies	685,565.00	978,030.00	1,039,284.00	1,091,248.00	1,145,811.00
Permits	1,490,610.00	2,379,193.00	2,483,432.00	2,607,604.00	2,737,984.00
Development Charges	4,737,500.00	4,265,760.00	4,562,964.00	4,791,112.00	5,030,668.00
Other Income	4,621,710.00	4,946,950.00	5,292,817.00	4,292,817.00	3,292,817.00
National Support	64,992,580.00	65,944,061.00	66,962,145.00	70,310,252.00	73,825,765.00
Grand Total	120,534,708.00	124,201,079.00	126,297,428.00	135,972,862.00	139,819,645.00

9.3.1 Owners Rates

This is income collected from property owners in the District which includes residential, commercial, industrial and mining properties. The introduction of the new Rating Act of 2018 allows the Local Authorities to collect from plant and machinery.

9.3.2 Local Taxes

These are personal levies collected from every employee in the District both in formal and informal employment. These funds are collected twice a year, from all employees in the District.

9.3.3 Fees and charges

These are fees and charges that the local authority collects on daily basis for the day to day running of the District.

9.3.4 Licenses

These are incomes collected from the business houses in the District through the issuance of trading licenses such as Health permits, Fire certificates, Petroleum licenses, Liquor licenses etc.

9.3.5 Levies

These are levies which are collected from the people who are trading in the District, such as charcoal levy, fish levy, timber levy etc.

9.3.6 Development charges

These are one-time fees levied by Municipalities on new residential and non-residential properties to help pay for a portion of the growth-related capital infrastructure requirement.

9.3.7 Debtors

These are companies and individuals who owe the council in various ways e.g. Rates payer, Business houses who have not paid for the personal levies etc.

9.3.8 National support

These are incomes which come from the Central government in accordance with the National constitution which includes Local Government Equalization Fund (LGEF), Constituency Development Fund (CDF) and Grant In Lieu Of Rates. These funds are meant for different developmental issues in the District and other operational activities.

In summary all the incomes have gone up from one year to another due to rise in inflation rate.

9.4 Programme for the Preparation of Local Area Plans and Other Detailed Planning Activities

Table 63: Shows programmes to be done in the district 2022 to 2033

S/N	PROGRAMME	START YEAR	END YEAR
1.	Upgrading of Fisenge Settlement area	2022	2023
2.	Upgrading of Kamuchanga settlement area	2024	2025
3.	Upgrading of Buntungwa settlement area	2025	2026
4.	Upgrading of upgrading of Misaka settlement area	2026	2027
5.	Designing of the local area plan for Maposa	2027	2028
6.	Designing of the local area plan for Mansansa	2028	2029
7.	Designing of the local area plan for Muva Hill	2030	2033

9.5 Monitoring and Evaluation Plan, Including Key Performance Indicators

Table 64: Fisheries and Livestock Sector Monitoring and Evaluation Plan

Programme	Indicator	Activities	Location (by priority)	Target Year 1	Target Year 2	Target Year 3	Target Year 4	Target Year 5	Lead institution & Institutions to liaison with	Means of verification	Frequency
Goal: Improved production and productivity of Fish and Livestock by 2026											
Objective 1: To enhance sustainable fisheries and livestock production and productivity from 30% to 50% by 2026											
Livestock Development	Number of farmers trained	Training of farmers	In all rural wards	200	200	200	200	200	MFL, LA, district administration, MoA	Reports	Quarterly/Annual
	Hectares of pasture planted	Pasture production	In all rural wards	4	4	4	4	4	MFL, LA, district administration, MoA	Reports	Quarterly/Annual
	Number of watering points constructed	Establishment of Watering points for livestock	Fisenge, kafubu, Maposa, muvahill	2	2	2	2	2	MFL, LA, district administration, MoA	Reports	Quarterly/Annual
	Number of vet camps covered	Livestock disease control and prevention	In all rural Wards	7	7	7	7	7	MFL, LA, district administration, MoA	Reports	Quarterly/Annual
	Number of farmers complying with programme	Animal Identification and traceability system strengthened	In all rural Wards	400	400	400	400	400	MFL, LA, district administration, MoA	Reports	Quarterly/Annual
	Number of dairy animals	Livestock stocking and restocking	In all rural Wards	100	100	100	100	100	MFL, LA, district administration, MoA	Reports	Quarterly/Annual
	Number of beef animals		In all rural Wards	100	100	100	100	100	MFL, LA, district administration, MoA	Reports	Quarterly/Annual

	Number of goats		In all rural Wards	250	250	250	250	250	MFL, LA, district administration, MoA	Reports	Quarterly/Annual
	Number of local chickens		In all rural Wards	2500	2500	2500	2500	2500	MFL, LA, district administration, MoA	Reports	Quarterly/Annual
	Number of farmers trained	Training of farmers	In all rural Wards	200	200	200	200	200	MFL, LA, district administration, MoA	Reports	Quarterly/Annual
Aquaculture Development	Number of farmers	Aquaculture farmers empowered	In all rural Wards	50	50	50	50	50	MFL, LA, district administration, MoA	Reports	Quarterly/Annual
	Number of kilograms of fish produced	Kilograms of fish produce	In all rural Wards	300,000	300,000	300,000	300,000	300,000	MFL, LA, district administration, MoA	Reports	Quarterly/Annual
Fisheries and Livestock Market Development	Number of fish value chains	Establishment of fisheries and livestock value chains	In all rural Wards		1				MFL, LA, district administration, MoA	Reports	Quarterly/Annual
	Number of livestock value chains		In all rural Wards		1				MFL, LA, district administration, MoA	Reports	Quarterly/Annual
Objective: To improve Institutional and operational capacity from the current 30% to 50% by 2026											
Institutional Capacitation	Number of houses constructed	Construction of houses	Fisenge, Maposa kafubu, muva hill, roan,	1	1	1	1	1	MFL, LA, district administration, MoA	Reports	Quarterly/Annual
	Number of office blocks constructed	Construction of office block	James Phiri		1				MFL, LA, district administration, MoA	Reports	Quarterly/Annual

	Number of artificial insemination satellite centres established	Artificial Insemination Satellite establishment	James Phiri		1				MFL, LA, district administration, MoA	Reports	Quarterly/Annual
	Number of vehicles procured	Procurement of motor vehicles	James Phiri		1				MFL, LA, district administration, MoA	Reports	Quarterly/Annual
	Number of motor bikes	Procurement of motor bikes	Fisenge, Maposa kafubu, muva hill, roan,	1	1	1	1	1	MFL, LA, district administration, MoA	Reports	Quarterly/Annual
	Number of staffs deployed	Deployment of staffs	Fisenge, Maposa kafubu, muva hill, roan,		5	5	5	5	MFL, LA, district administration, MoA	Reports	Quarterly/Annual

Table 65: Agriculture Sector Monitoring and Evaluation Plan

Programme	Indicator	Activities	Location (by priority)	Target Year 1	Target Year 2	Target Year 3	Target Year 4	Target Year 5	Lead institution & Institutions to liaise with	Means of verification	Frequency
Goal 3: Improved agricultural production and productivity by (Crops)											
Objective 1: To Improve crop production and productivity from the current 30% (Production potential) to 50% percent by 2027											
Increase production of selected crops	No. of tons/hectare	Farmer training in Soya beans production	All rural wards	3	3	3	3	3	Local authority, DWRD, MFL, District Administration	Reports	Quarterly
		Farmer training in Groundnuts production	All rural wards	1	1	1	1	1			

		Farmer training in Mixed Beans production	All rural wards	1	1	1	1	1			
Climate Smart Agriculture promoted	Area under conservation agriculture	Sensitization of farmers on conservation farming	All rural wards	150	150	150	150	150	Ministry of Agriculture DWRD, MFL, District	Reports	Quarterly
	Number of farmers using drought tolerant crop varieties	Farmer sensitisation on drought tolerant varieties	All rural wards	3000	3000	3000	3000	3000			
Mechanised farming enhanced.	Number of farmers using mechanized farming.	Training of farmers on mechanized farming.	All rural wards	50	50	50	50	50	Ministry of Agriculture DWRD, MFL, District	Reports	Quarterly
Agriculture input supply chain diversified and improved	Number of farmers accessing inputs	Provision of farming inputs to farmers	All rural wards	3000	3000	3000	3000	3000	Ministry of Agriculture DWRD, MFL, District	Reports	Quarterly
Irrigation Development	No. of weirs	Construction of weirs	Fisenge, Maposa, kafubu, muvahill, roan	1	1	1	1	1	Ministry of Agriculture DWRD, MFL, District	Reports	Quarterly
Extension Service support	Number of officers recruited	Recruitment of staffs	James phiri	0	2	0	0	0	Ministry of Agriculture DWRD, MFL, District	Reports	Quarterly
	No. of motorbikes purchased	Procurement of motor bikes	Fisenge, Maposa, kafubu, muvahill, roan	1	1	1	1	1

	No. of protected wells	Digging protected wells		4	4	4	4	4	KWSC, RDA, MWDSEP, ZESCO, WARMA	Reports, Receipts, Photos	Annually

10 Conclusion

The Integrated Development Plan is a super plan with the overall Development framework for the entire District. It must be noted as a roadmap for local authorities to seriously embark on harmonizing development in the District. Successive planning documents and strategic plans have been developed and implemented in the past by respective departments, organizations and firms. It is however regrettable to note that the implementation of these sector plans has not been done in a harmonized manner leading to ineffectiveness and inefficiency in distributing national resources. This also brought about policy conflicts in some departments within the district. The Integrated Development Plan brings all stakeholders together, develops a District Development Agenda and implements the activities as a unit under the Local authority. Development of this very important document was done through a lengthy and inclusive process that ensured all stakeholders participate in identifying real issue that need to be attended to during the implementation phase. The plan was also developed in line with the national and sector policy mandates that exist. The implementation framework may not have included every identified issue, but priority issues are highlighted while the rest will be brought to light during the mid-term review of the Integrated Development Plan.

12 APPENDICES

12.1 Appendix 1: Policy and Legislative Documents

Table 72: International protocols and the implication on the IDP

Document	Focus area	Implication focus
United Nations Sustainable Development Goals (SDG) 2015 - 2030	The Sustainable Development Goals (17) are the blueprint to achieve a better and more sustainable future for all. They address the global challenges faced by the international community, especially those related to poverty, inequality, climate change, environmental degradation, peace and justice. There are 17 Goals which are all interconnected (Nation, 2015). In order to leave no one behind, it is important that we achieve them all by 2030.	Because the nation subscribes to these SDGs, it is important to integrate the SDGs into the IDP. This will help on a smooth planning and implementing of the Integrated development (IDP)
New Urban Agenda (NUP)	The New Urban Agenda, sets a new global standard for sustainable urban development, and how to plan and manage cities. The New Urban Agenda is roadmap for building cities that can serve as engines of prosperity and centres of cultural and social well-being while protecting the environment. It also provides guidance for achieving the Sustainable Development Goals and provides the underpinning for actions to address climate change.	The Luanshya IDP will take on board the focus area of the new urban agenda in order to facilitate for smooth and sustainable urban development that ensures that cultural, social well-being and climate change resilience are enhanced.
Paris Agreement	The Paris Agreement sets out a global framework to avoid dangerous climate change by limiting global warming to well below 2°C and pursuing efforts to limit it to 1.5°C. It also aims to strengthen countries' ability to deal with the impacts of climate change and support them in their efforts.	The Luanshya IDP seeks to embrace national and global plans in the quest to reduce the effects of climate change.

Table 73: National Laws and Plans

Document	Focus area	Implication focus
Vision 2030	The Vision 2030 (Vision 2030) is Zambia's first ever written long-term plan, expressing Zambians' aspirations by the year 2030. It articulates possible long-term alternative development policy scenarios at different points which would contribute to the attainment of the desirable	The IDP document embraces the activities to support the attainment of the vision 2030

	social economic indicators by the year 2030.(GRZ, Vision 2030, 2010)	
8 th National Development Plan (8NDP)	The 8NDP is expected to create a competitive, resilient, inclusive and industrialised economy to ensure improved socio-economic standards of living and quality of life of the entire population on a sustainable basis. Further, the macro economic objectives for the 8NDP period are to restore macroeconomic stability by raising real GDP growth as well as attaining fiscal and debt sustainability to improve the livelihoods of the Zambian population, especially the vulnerable in all parts of the country. (GRZ, 8th National Development Plan, 2022)	All the programmes in the IDP supports the implementation of the 4 pillars in 8NDP
Decentralization Policy	Decentralization is the transfer of part of the powers from the central government to regional or local authorities. In other words, it is as the process of political devolution, fiscal and decision-making from the central government at the local level. The main objective is to give power to the local people to make decisions on matters affecting their localities	The IDP process takes into account all matters, and institution arrangements in order to realize the goal of the decentralization policy
National Health Policy (NHP)	This National Health Policy outlines a statement by the Zambian Government to set clear directions for the development of the Health Sector in Zambia. It sets out policy measures that guide strategies and programmes in the health sector. The policy also takes into consideration various Regional and International Instruments, Protocols and Commitments which will ensure that Zambia's health programmes are integrated with the regional and global health system	The IDP document will facilitate the implementation of the policy by bringing all strategies and programmes in the health sector for the realisation of the policy.
National Agricultural Policy	The Second National Agricultural Policy (NAP) 2016 -2020 focuses on ten strategic objectives that include objectives promoting productivity, promoting Research & diversification, strengthening training, promoting markets (inputs and outputs), private sector participation, and nutrition and food security.	The Agricultural Policy provides a road map for IDP in the quest to improve productivity, nutrition and food security in the agricultural sector. This will subsequently improve the economic wellbeing.

Education policy	The education policy focuses on offering education for all regardless of status, disability, sex, residence etc. Its approach is inclusive taking into account various stakeholders such as: NGOs, Faith based Organisations, individuals and parents in the provision of education. The policy further takes care of all cross-cutting issues in the planning process.	With the view of improving education standard in the district, the IDP document aligns its education programmes with the education policy.
Climate Change Policy	The climate change Policy provides a framework for coordinated response to climate change issues. It gives guidance on how the Zambian economy can grow in a sustainable manner and thereby fostering a smooth implementation of the Eight 8th Nation Development Plan (7NDP) including the achievement of the Vision 2030	Climate change affects productivity in various key sectors of economy. It is therefore envisaged that IDP promotes programmes and activities that enhance sustainable utilisation of natural resources.
Disability Policy	The government considers the people with disabilities as important as any other able-bodied persons. The disability policy seeks to provide equal opportunities for persons with disabilities. The policy further helps to change laws that discriminate people with disabilities in order to improve their living standard.	In the quest to address the social inequalities, the IDP creates the conducive environment by providing accessible infrastructure facilities and social protection programmes that meets the special needs of the people with disabilities
Gender Policy	This National Gender Policy is aimed at ensuring the attainment of gender equality in the development process by redressing the existing gender imbalances. It also provides for equal opportunities for women and men to actively participate and contribute to their fullest ability and equitably benefit from national development. The Policy examines situations in various sectors from a gender perspective in order to provide appropriate guidance, strategies and interventions for its successful implementation. The policy ensures that gender mainstreaming takes root across all sectors as a means to achieving equitable and sustainable socio-economic development	There have been some imbalances at decision making levels with regard to meeting the needs of womenfolk. In order to address the foresaid, the IDP takes on board gender equality and equity in all aspects during the implementation of the IDP in the district.
Industrialization Policy	This policy document serves as a framework for consolidating the gains of	The IDP document endeavors to promote industrialization

	the past decade to ensure the growth of industrial activity in the country especially for Micro, Small and Medium Enterprises. The policy fosters new industrial capacity, promote the diversification of production, facilitate the creation of inter-sectoral and inter-industry linkages, promote the establishment of cooperatives across value chains, promote the development of industry specific skills and facilitate the shifting of economic activity towards higher value-added activities to spur sustainable economic growth.	that seeks to diversify the district economy in line with the industrial policy.
National Trade Policy	The aim of the document is to pursue an open, export-led trade strategy based on open markets and global competition. The policy further focuses on tariffs while recognizing the implications for Government revenue, adjustment costs for industry and the policy space necessary to generate development and inclusive growth.	The IDP takes cognizance that industrialization goes in hand with both local and foreign trade laws and regulations. Therefore, the document will operationalize the trade policy in order to promote value addition.

Table 74: legislation that support the IDP

Document	Focus area	Implication focus
The Constitution of Zambia	This Constitution is the supreme law of the Republic of Zambia and any other written law, customary law and customary practice that is inconsistent with its provisions is void to the extent of the inconsistency.	The IDP is being Backed up by the constitution meaning all programs therein shall be those that are in line with the provisions of the constitution
Urban and Region Planning Act 2015	An Act to provide for development, planning and administration principles, standards and requirements for urban and regional planning processes and systems. The act promotes integrated urban and regional development in a devolved government system, aiming for sustainable development	The IDP will formulate the programs and activities in line with the provisions of the Act

	from the national to the city level	
Lands Act of 1995	An Act provides for the continuation of Leaseholds and leasehold tenure, to provide for the continued vesting of land in the President and alienation of land by the President and to provide for the statutory recognition and continuation of customary tenure	The IDP ensures that all plans and programs are designed with due cognizance of the provisions of this act.
Environmental Management Act of 2012	provide for integrated environmental management and the protection and conservation of the environment and the sustainable management and use of natural resources	The IDP provides for projects and programs that address environmental concerns such as solid waste management. Such programs shall be implemented in line with the Act
Minerals and Mines Development Act of 2012	An Act to make provision with respect to prospecting for and mining minerals, to repeal the Mines and Minerals Act and to provide for matters connected with or incidental to the foregoing	The IDP identifies mining as one of the critical sectors in the district. It provides for plans and strategies on how this sector can contribute sustainably. Therefore, the plan is oriented in line with the provision of the Act
Forestry Act No. 4 of 2015	An Act to provide for sustainable Forestry management through stake holder participation and diversification	The IDP recognizes the role forestry plays in mitigating climate change and ecological sustainability
Land Acquisition Act Cap 189 of the Laws of Zambia	Act to make provision for the compulsory acquisition of land and other property; and to provide for matters incidental to or connected with the foregoing.	The IDP ensures that all plans and programs are designed with due cognizance of the provisions of this act.

12.2 Appendix 2: Consultation with Stakeholder

During the stakeholder meetings the issues highlighted are shown in the table below-

Table 75: Core Issues

CORE ISSUES	CAUSES	PROPOSED SOLUTION
In peri-urban areas the distance that children walk to secondary school is three times the recommended national service standards which is 5 km	No secondary schools in peri urban	To build secondary schools in peri urban areas
Inadequate education service provision	inadequate funding, poor infrastructure development, low staffing levels in peri-urban communities;	Improve funding levels, improve infrastructure development, establishing boarding schools in rural community, recruitment of qualified teachers.
Poor water and sanitation	• Unplanned settlements, • Clogged old pipelines, • 46 percent of the total households in the district are served with sewer services. • Illegal development; • Limited integrated planning among key stakeholders i.e. council, ZESCO and Kafubu water and service	• Rehabilitation of all old and clogged pipelines for easy flow of water, • Law enforcement on all illegal structures; • Promote integrated planning development
Poor road network within the district	• Inadequate funding for road development, • Low revenue at councils to maintain roads • Lack of railway line	• Improve financial support and prudent utilization of funds, • Increase revenue base for the Local Authority to enhance road maintenance, • Re-establishment of railway line to reduce pressure on the roads.
Unsustainable Management of Forest	• Charcoal Production • Encroachment • unsustainable agriculture process • Infrastructure development	• Afforestation and reafforestation • Awareness • Promotion of non-wood product

High Poverty levels	• High unemployment rate, • High interest rate (Banks) • Global economic downturn	• Diversify the economic base to reduce over dependence on mining and reduce unemployment rates, • Lower interest rates
Inefficiency in waste Management	• Lack of responsibility among the members of the public • Lack of equipment among service providers • Limited stakeholders' participation	• Public awareness on importance on waste management • promoting of private sector in waste management • Local Authority to take charge • Stakeholders participation
Low productivity in agricultural Sector (Crops, livestock and fish production)	• Climate change • Untimely provisions of farming inputs, • Low staffing levels and funding, • Lack of farming training center	• Planting trees and smart agriculture, • Community dams for irrigation, • Timely provision of farm inputs, • Improve staffing levels and funding, • Establishing farm training centers.

12.2.1 Future Needs-Fives Years

1. Improved funding to key sectors for smooth service provision,
2. Switch to other alternatives sources of energy,
3. Continuous planting of indigenous plants,
4. Promote water harvesting projects,
5. Recruitment of qualified personnel in all key sectors
6. Improved road network system and establishment of an airstrip,
7. Establishment of standard bus station in central business district,
8. Creation of more social amenities,
9. Improved performance in agricultural sector (crops, livestock and aquaculture),
10. Establishment of boarding secondary schools.

12.2.2 Future Needs-ten Years

1. Improved infrastructure development and equipment at hospitals,
2. Improved afforestation to mitigate the effects of climate change,
3. All the roads to be at bituminous standard,
4. Dual carriage way from Luanshya turn off into town,
5. Improved farming mechanization among small holder farmers,
6. Improved value addition in all industries and agricultural sector,
7. Improved labour conditions in all institutions and industries,
8. Be economically diversified (Agriculture, SMEs, value addition(etc) and
9. Attaining HIV/AIDS epidemic control by 2030.
10. Attain city status of the council,

12.3 Appendix 3: Community Consultation

During the community consultations all the members of the Ward development committee and the community members from all the zones in the thirty (30) wards were consulted regarding the challenges facing their ward. The challenges and needs in the 30 wards are shown in the table below-

Table 76: Challenges and needs in the wards

S/N	Ward	Challenges	Proposed solutions
1	Baluba (Misaka)	❖ Long distance to the nearest secondary and lack of accommodation leading to teen pregnancies as students are forced to rent in communities, ❖ Water shortages especially during the dry season, ❖ Poor state of roads and bridges, ❖ Inadequate market facilities, ❖ Inadequate recreation centre facilities, ❖ Inadequate teachers houses, ❖ High unemployment rate ❖ High teacher pupil ratio in primary schools	❖ Construction of a secondary school, ❖ Drilling adequate bore holes to improve water supply, ❖ Construction of Lusumpuko Twapelwa and Luanshya River Bridges, ❖ Construction of markets, ❖ Construction of a police post in Chibwe, ❖ Electrification of Lusumpuko area ❖ Maintenance and rehabilitation of roads and drainages ❖ Establishment of a skill training centre in order to empower the community with skills ❖ Construction of classroom blocks at Elohi school
2	Fisenge	❖ Women walk a long distance to access maternity services. The mini hospital in Fisenge is not complete ❖ Long distance to a nearest secondary school	❖ Construction of a Maternity wing in Kasongo ❖ Completion of mini hospital in Fisenge ❖ Construction of a Secondary school in Kasongo ❖ Construction of Boreholes in Kasongo and Kapepa ❖ Electrification of Kasongo area ❖ Construction of a community skills centre
3	Maposa (Muva Hill)	❖ Long distance to the nearest secondary school ❖ Roads are in bad state ❖ People get soaked at the grave site during the rainy season as there is no shelter	❖ Construction of a secondary school ❖ Maintenance and rehabilitation of roads and drainages ❖ Construction of a mourner's shelter at the grave site ❖ Completion of the abandoned market project ❖ Construction of a police post

		❖ People have no place where to trade from as the market project has been abandoned ❖ High rate of crime	❖ Electrification of the ward
4	Buteko ward	❖ Kamirenda school has no water, ablution block and electricity ❖ Toilets at Kamirenda market are in bad state and there is shortage of water supply ❖ Roads within the town centre are in bad state ❖ Old Ndola Road is in bad state ❖ Shortage of water at St. Neil	❖ Electrification of Kamiranda School ❖ Construction of Toilets and provision of water at Kamirenda market ❖ Rehabilitation of township roads ❖ Rehabilitation of the Ndola Road ❖ Provision of borehole at St Neil
5	Chitwi	❖ Erratic water supply due to few and broken boreholes ❖ Feeder roads have not been upgraded for years ❖ No electricity	❖ More boreholes water tank at chitwi ❖ Piped water ❖ Upgrade of feeder roads ❖ Connected to the national grid to ease people's livelihood
6	Mulungushi	❖ High rate of crime and theft ❖ High rate of malaria ❖ No bus shelter ❖ No clean water as most of the pipes have damaged ❖ Too much waste in the area	❖ Construction of a Police post ❖ Construction of a bus shelter ❖ Upgrading of Mikomfwa health centre into mini hospital ❖ Repairing or replacing old water pipes ❖ Construction of Refuse bay
8	Mpelembe	❖ High levels of unemployment due to the closure of some units in the mines and other key industries ❖ No street lights ❖ Crime rate is high due to unemployment and lack of street lights ❖ Poor road network in Kapupulu area ❖ Poor health service delivery due to lack of adequate infrastructure such as houses for health staff ❖ Poor educational facilities and services due to Inadequate classrooms, laboratories, teachers houses, libraries and computer labs	❖ Revamping of sports facilities in the ward ❖ Mounting of solar street lights ❖ Establishment of skills training centre to create employment and reduce crime ❖ Construction of new roads and bridges Kapupulu area ❖ Construction of health staff houses ❖ Construction of classroom blocks laboratories, teachers houses, libraries and computer labs

9	Kansengu	❖ Unemployment due to closure of mines empowerment of the community ❖ Poor garbage disposal no garbage disposal facility	❖ Creation of skills training centres. ❖ Provision of Garbage disposal facilities.
10	Mikomfwa	❖ Roads and drainages are in poor state ❖ Drug abuse among the youths	❖ Rehabilitation and maintenance of roads and drainages ❖ Construction of a youth skill centre
11	Nkulumashiba	❖ High unemployment rate ❖ Access to the clinic is difficult ❖ Lack of recreation facilities ❖ Damaged Streets lights ❖ No clinic in ward ❖ No playing parks ❖ Bad states of the roads	❖ Provide Skill training centre ❖ Construction of a clinic ❖ Recreation facilities ❖ Street lighting ❖ Maintenance and rehabilitation of roads
12	Milyashi	❖ High levels of substance abuse and early pregnancies among the youths ❖ Unemployment, poverty lack of financial and empowerment in economic activities ❖ Blockages of sewer lines and man holes on the northern side of section 25	❖ Revamping of recreation centers ❖ Empower the youths, women and men with financial support ❖ Rehabilitation of sewer lines
13	Mpatamatu	❖ Poor sanitation ❖ Blocked drainages and culverts ❖ Garbage not collected frequently ❖ High levels theft ❖ Long distance to access a clinic	❖ Stone pitching and replacement, unblocking of drainages and culverts ❖ Repairing of drainages and culvert ❖ Sensitization of the community on solid waste management ❖ Skill training center - Construction of a clinic
14	James Phiri	Second Class ❖ There is no bus shelter at Kapindula for people going to Roan; ❖ Sewerage problems in Kaoma ❖ Street light installation not completed	❖ Construction of a bus shelter at Kapindula station ❖ working on sewerage in Kaoma ❖ To complete the street light installation

15	Mwaiseni (Buntungwa)	❖ No power supply in most houses in ward; connect the houses to power grid ❖ No neighborhood watch; Provide a neighborhood watch ❖ Lack of water supply in Kamuchanga ❖ Street light installation not completed ❖ D-market needs to be upgraded; enlarge D-market ❖ Poor roads; D Market road is not wide enough; enlarge/widen the road, Kosapo road should be graded ❖ The roofs covering Kamuchanga market were blown off; this require urgent attention	❖ Power supply ❖ Construction of a Police post ❖ Construction of Boreholes ❖ Construction of a proper drainage system ❖ Working on Kamuchanga market which has its roofs blown off ❖ Upgrading of D-market ❖ Construction and Rehabilitation of roads and bridge ❖ Completion of installation of street lighting
16	Levi Chito	❖ Bad state of roads ❖ Street kids, orphans, early marriages; caused by premature death due to HIV/ ❖ Lack of survival skills; ❖ Bad state of Makonde hall ❖ Too much crime; lack of employment; police post ❖ Illiteracy among the disabled people; no proper schools for them; a school properly designed for disabled people	❖ Construction and rehabilitation of roads ❖ Construction of Skills center ❖ Community school ❖ Rehabilitation of makonde hall ❖ Rehabilitation of street light at Buteko market ❖ Construction of a Police post
17	Buntungwa (Chifulube)	❖ Women walk a distance to access maternity services ❖ Extend Mama Rosa School; caused by high population; ❖ No borehole; ❖ No health post; ❖ Bad state of roads and bridges	❖ Construction of a maternity ward and fencing of Franco clinic ❖ Construction of a 1 by 3 classroom ❖ Installation of a borehole at Mama Rosa to cater for all the teachers houses ❖ provide a health post within the ward ❖ electrification of Chifulube School ❖ Community school and opening of roads in Chifulube west ❖ Construction of Health post in Chifulube east ❖ Construction and rehabilitation of roads and bridges
18	Nkoloma	Poor Drainage system Poor Garbage collection	❖ Rehabilitation and maintenance of the drainages ❖ Recruitment of more staff at section 3 clinic

		Early closure of section 3 clinic due to limited manpower Substance abuse Lack of recreation facilities Early opening of drinking places	❖ Revamping of recreation centers
19	Buyantashi (Baluba)	❖ Bad state of Mpatamatu market; ❖ Poor drainages in Nkulumashiba ❖ No functioning street lighting in the market area; it is long overdue; redoing the street lights	❖ Rehabilitation of Mpatamatu market; ❖ Clearing and unblocking of Nkulumashiba drainages ❖ Street lighting in the market area
20	Ngebe Ward	❖ Unemployment levels are high; no creation of employment; no creation of employment; empowerment of youths and women ❖ Kalulu primary school is too small and has no facilities such as electricity, water and ablution block; ❖ Section 26 clinic has no clinical emergencies; load shedding ❖ Crime rate is high; unemployment; police post needed	❖ Creation of skills centre ❖ Upgrading of Kalulu primary school to secondary level and have all facilities such as water, electricity and ablution block ❖ Improving the condition of section 26 clinic
21	Kafubu Ward	❖ Market place is far; no market in the area ❖ No station in the area ❖ No security; no police post ❖ Poor drainage system; blocked drainages ❖ Poverty; no activities to women and youth	❖ Construction of a market shelter ❖ Building a bus station ❖ Construction of a police post ❖ improving drainage system ❖ empowering women with empowerment funds
22	Kawama Ward	❖ Lack of market in Kawama; ❖ Pupils travel long distances to nearest secondary school; no secondary school nearby; rehabilitation and upgrading of Kawama primary to a secondary school ❖ Bad of state of mpata hills road ❖ Crime rate has increased in Kawama; ❖ Long distance to primary school in Kasununu; no nearby primary school; ❖ Long distance to clinic in Kasununu; no nearby clinic; ❖ Bad road network in Kasununu;no proper access to other areas; upgrading to good standard	❖ construction of a modern market ❖ Upgrading of Kawama primary school ❖ Road to Mpata Hill to be tarred ❖ Upgrading of Mansansa primary ❖ Construction of police post ❖ More schools that is primary and secondary ❖ Construction of Skills training for youths and women ❖ construction of a clinic ❖ Rehabilitation of roads ❖ Boreholes

		❖ Water crisis in Kasununu; they draw water in bad shallow wells; to drill boreholes	
23	Zambezi Ward	❖ Poor drainages; uncleaned, blocked and others not constructed ❖ Mipundu primary school is in a bad state; no wall fence, broken desks, unpainted and no library; construct new wall fence, rehabilitate buildings and build a library at Mipundu primary school ❖ No security; no police post; Lack of recreational facilities in Buntungwa zone; due to lack of proper concern by the authorities; a park should be reserved for recreation facilities ❖ Poor state of roads; main roads are being overlooked; all roads, shanty or urban to be upgraded and tarred ❖ High rate of unemployment; due to lack of training skills and workshops for youths; empower youths with various skills ❖ No street lighting in Muunga zone; the council has removed the street lighting which was there before. ❖ No piped water; pipes are blocked;	❖ Cleaning and unblocking of drainages and construction of new ones ❖ Construction of wall fence, replace glass panes, rehabilitate desks, paint walls at Mipundu primary school ❖ Building of a public library in Mipundu ❖ Construction of police post ❖ Road upgrading ❖ Street lighting to be installed ❖ Installation of street lighting ❖ renovation of water pipes
24	Chilabula	❖ School collapsed at Chisokone Community school ❖ Distance to the nearest hospital in case of complication ❖ Children walk a long distance to access secondary schools and most of the time learners lodge in nearby places which has led to high pregnancy rate among the girl child ❖ Limited communication	❖ Construction of a school ❖ Extension of a maternity wing ❖ Construction of a secondary school ❖ Boarding School ❖ Communication towers for easy access ❖ 16 bore holes ❖ Construction of a market ❖ Construction feeder roads in Kampelembe zone
25	Lumumba	❖ Lack of proper dumping sites hence people throw garbage any how ❖ Garbage piled up as it is not collected ❖ No street lights as most of them are vandalized and lack of maintenance and road network for the plots	❖ Construction of dumping site ❖ Installation of solar light

26	Justine Kabwe	❖ Lack of a clinic near by ❖ Blockages of sewer as the pipes are too small and there have been there for a long time ❖ Drug abuse among the youths as they don't have things to do	❖ Construction of a clinic ❖ Replacing of pipes with bigger one ❖ Construction of a work shop where carpenters, tailors and others will be working from ❖ Installation of street lights ❖ Rehabilitation of roads
27	Twashuka	❖ Many vulnerable old people, orphans and widows ❖ Children walk a long distance to secondary schools ❖ Lack of a market, bus station ❖ No order in the arrangement of houses ❖ No piped water ❖ Unopened clinic to the community that has been constructed since 2013 ❖ Lack of borehole	❖ Providing of social protection funds orphans and elderly ❖ Construction of a secondary school ❖ Construction of a market, bus station ❖ Preplanning of the area ❖ Need for a clinic to be opened in Kankwiba zone ❖ Construction of a bore holes
27	Mipundu	❖ Blockages of drainages, sewer pipes due to lack of maintenance and pipes are old ❖ Lack of recreation facilities eg play parks for children ❖ High unemployment levels among the youths, crime rate ❖ Lack of a clinic	❖ Pipes to be replaced and un blocking of drainages ❖ Construction of a recreation facilities ❖ Empowerment of the community ❖ Construction Police post ❖ Construction of a clinic
28	Kafue	❖ Water and sewer system high unemployment rate ❖ Refuse collection not frequently done and no dumping site ❖ Shortages of medicine at the clinic Lack of market, police post and bus shelter ❖ Bars and taverns are open and closed at any time	❖ To put up new pipes more ward funding ❖ Empowerment enforcement from council police on time of opening and closing of bars and taverns ❖ Police post ❖ New roads made to bituminous standard ❖ Construction of a new market ❖ Clinic
29	Chawama	❖ Long distance to the health post ❖ Poor Road Network ❖ Few for schools ❖ Challenges in accessing a market as the nearest market is in Baluba area ❖ Water Sanitation and services	❖ Construction of a health post in Kakumba zone ❖ Need for rehabilitation and opening up of new roads ❖ Provision of primary and secondary schools to improve access to education for the community ❖ Construction of a new market

			❖ Improved access to safe and clean water through an improved water system throughout the community.
30	Kamuchanga	❖ Poor Road Network ❖ Lack of police Station in a central location	❖ Rehabilitation and opening up of new roads ❖ Provision of centrally positioned police post

12.4 Appendix 4: Road Network in the District

Table 77: Feeder Roads in Luanshya district

SN	Name of Road	Distance Km	Type of Road	Condition
1	Mikomfwa Chifulube	15.7	Gravel	Poor

12.5 Appendix 5: Swot Analysis

To understand the Luanshya current and possible avenues, internal and external factors that are of strategic importance were identified. The SWOT analysis is intended to bring out issues which are either of a positive or negative nature. The analysis of the external environment involved examining the political/policy, economic, social, technical, environmental, and legal (PESTEL) situations. The issues identified were then tabulated as internal strengths and weaknesses and as external opportunities and threats (SWOT). Table 2 below highlights the identified strengths, weaknesses, opportunities and threats.

Table 79: Strengths, Weaknesses, Opportunities and Threats

Strengths	Weaknesses
▪ Skilled, qualified and experienced human resource. ▪ Relatively good infrastructure (road network, schools, electricity, ICT, hospitals etc.) ▪ Political stability ▪ Availability of natural resources (i.e. forests, minerals, adequate arable land, streams and a river) ▪ High population- large market base ▪ Banking facilities ▪ Youthful population (labour) at 52% of the total population,	▪ Mono economy (copper mining) ▪ Encroachment on protected forests ▪ High Incidences of casualization of the work force ▪ Low productivity in goods and services ▪ Low capacity (technology, transport, machinery etc.) ▪ Limited access to finances
Opportunities	Threats
▪ Goodwill (Government, private sector)	▪ Policy shifts

▪ Existence of conducive government policies i.e. decentralization policy, Public Private Partnership (PPP) policy, etc. ▪ Strategically located in relation to neighbouring districts with huge market potential. ▪ Favourable weather patterns and conditions	▪ Climate Change ▪ Global economic instability ▪ High cost of borrowing interest rates ▪ Unstable exchange rate ▪ High unemployment levels especially amongst the youths
---	--
